

Drawing UML with PlantUML

PlantUML Language Reference Guide

(Version 1.2021.2)

PlantUML is a component that allows to quickly write :

- Sequence diagram
- Usecase diagram
- Class diagram
- Object diagram
- Activity diagram
- Component diagram
- Deployment diagram
- State diagram
- Timing diagram

The following non-UML diagrams are also supported:

- JSON Data
- YAML Data
- Network diagram (nwdiag)
- Wireframe graphical interface
- Archimate diagram
- Specification and Description Language (SDL)
- Dita diagram
- Gantt diagram
- MindMap diagram
- Work Breakdown Structure diagram
- Mathematic with AsciiMath or JLaTeXMath notation
- Entity Relationship diagram

Diagrams are defined using a simple and intuitive language.

1 Sequence Diagram

1.1 Basic examples

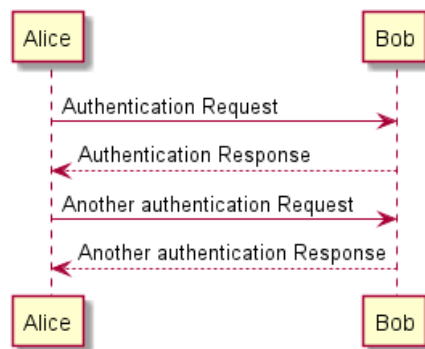

The sequence `->` is used to draw a message between two participants. Participants do not have to be explicitly declared.

To have a dotted arrow, you use `-->`

It is also possible to use `<-` and `<--`. That does not change the drawing, but may improve readability. Note that this is only true for sequence diagrams, rules are different for the other diagrams.

```
@startuml
Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

Alice -> Bob: Another authentication Request
Alice <-- Bob: Another authentication Response
@enduml
```

1.2 Declaring participant

If the keyword `participant` is used to declare a participant, more control on that participant is possible.

The order of declaration will be the (default) **order of display**.

Using these other keywords to declare participants will **change the shape** of the participant representation:

- actor
- boundary
- control
- entity
- database
- collections
- queue

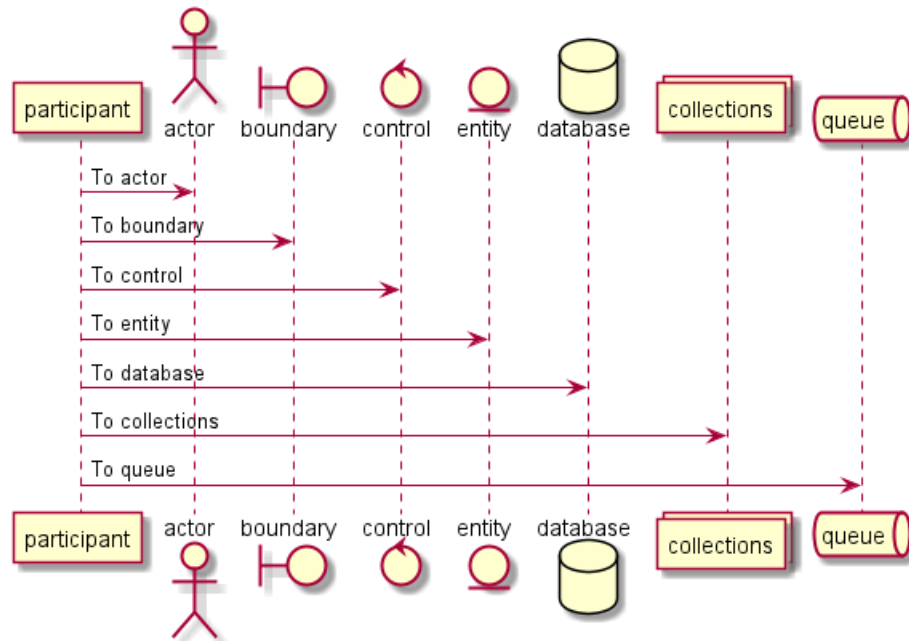

```
@startuml
participant participant as Foo
actor actor as Foo1
boundary boundary as Foo2
control control as Foo3
entity entity as Foo4
database database as Foo5
collections collections as Foo6
queue queue as Foo7
Foo -> Foo1 : To actor
```

```

Foo -> Foo2 : To boundary
Foo -> Foo3 : To control
Foo -> Foo4 : To entity
Foo -> Foo5 : To database
Foo -> Foo6 : To collections
Foo -> Foo7: To queue
@enduml

```

Rename a participant using the `as` keyword.

You can also change the background color of actor or participant.

```

@startuml
actor Bob #red
' The only difference between actor
'and participant is the drawing
participant Alice
participant "I have a really\nlong name" as L #99FF99
/' You can also declare:
    participant L as "I have a really\nlong name" #99FF99
/'

```

```

Alice->Bob: Authentication Request
Bob->Alice: Authentication Response
Bob->L: Log transaction
@enduml

```

You can use the **order** keyword to customize the display order of participants.

```

@startuml
participant Last order 30
participant Middle order 20
participant First order 10
@enduml
  
```

1.3 Use non-letters in participants

You can use quotes to define participants. And you can use the **as** keyword to give an alias to those participants.

```

@startuml
Alice -> "Bob()" : Hello
"Bob()" -> "This is very\nlong" as Long
' You can also declare:
' "Bob()" -> Long as "This is very\nlong"
Long --> "Bob()" : ok
@enduml
  
```

1.4 Message to Self

A participant can send a message to itself.

It is also possible to have multi-line using .

```

@startuml
  
```

```
Alice->Alice: This is a signal to self.\nIt also demonstrates\nmultiline \ntext
@enduml
```

1.5 Text alignment

1.5.1 Text of response message below the arrow

You can put the text of the response message below the arrow, with the `skinparam responseMessageBelowArrow true` command.

```
@startuml
skinparam responseMessageBelowArrow true
Bob -> Alice : hello
Alice -> Bob : ok
@enduml
```

TODO: TODO Link to Text Alignment on skinparam page.

1.6 Change arrow style

You can change arrow style by several ways:

- add a final `x` to denote a lost message
- use `\` or `/` instead of `<` or `>` to have only the bottom or top part of the arrow
- repeat the arrow head (for example, `>>` or `//`) head to have a thin drawing
- use `--` instead of `-` to have a dotted arrow
- add a final `o` at arrow head
- use bidirectional arrow `<->`

```
@startuml
Bob ->x Alice
Bob -> Alice
Bob ->> Alice
Bob -\ Alice
Bob \\\- Alice
Bob //-- Alice

Bob ->o Alice
Bob o\\-- Alice
```

```

Bob <-> Alice
Bob <->o Alice
@enduml

```

1.7 Change arrow color

You can change the color of individual arrows using the following notation:

```

@startuml
Bob -[#red]> Alice : hello
Alice -[#0000FF]->Bob : ok
@enduml

```

1.8 Message sequence numbering

The keyword `autonumber` is used to automatically add number to messages.

```

@startuml
autonumber
Bob -> Alice : Authentication Request
Bob <- Alice : Authentication Response
@enduml

```

You can specify a startnumber with `autonumber //start//` , and also an increment with `autonumber //start// //increment//`.

```

@startuml
autonumber
Bob -> Alice : Authentication Request

```

```

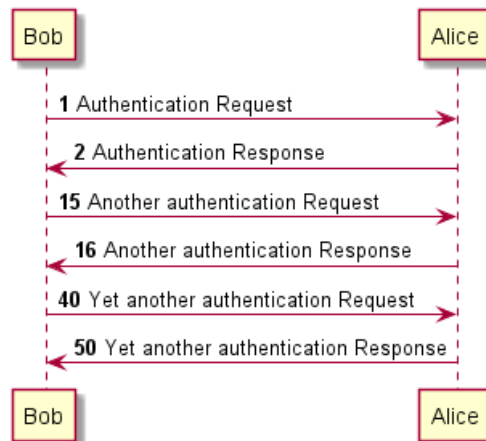

Bob <- Alice : Authentication Response

autonumber 15
Bob -> Alice : Another authentication Request
Bob <- Alice : Another authentication Response

autonumber 40 10
Bob -> Alice : Yet another authentication Request
Bob <- Alice : Yet another authentication Response

@enduml

```

You can specify a format for your number by using between double-quote.

The formatting is done with the Java class `DecimalFormat` (0 means digit, # means digit and zero if absent).

You can use some html tag in the format.

```

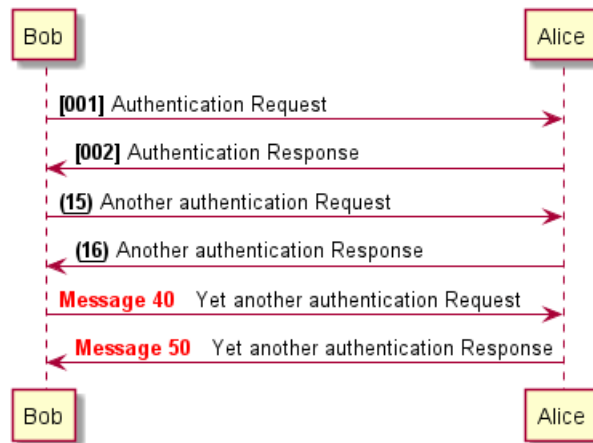

@startuml
autonumber "<b>[000]"
Bob -> Alice : Authentication Request
Bob <- Alice : Authentication Response

autonumber 15 "<b>(<u>##</u>)"
Bob -> Alice : Another authentication Request
Bob <- Alice : Another authentication Response

autonumber 40 10 "<font color=red><b>Message 0  "
Bob -> Alice : Yet another authentication Request
Bob <- Alice : Yet another authentication Response

@enduml

```

You can also use `autonumber stop` and `autonumber resume //increment// //format//` to respectively pause and resume automatic numbering.

```

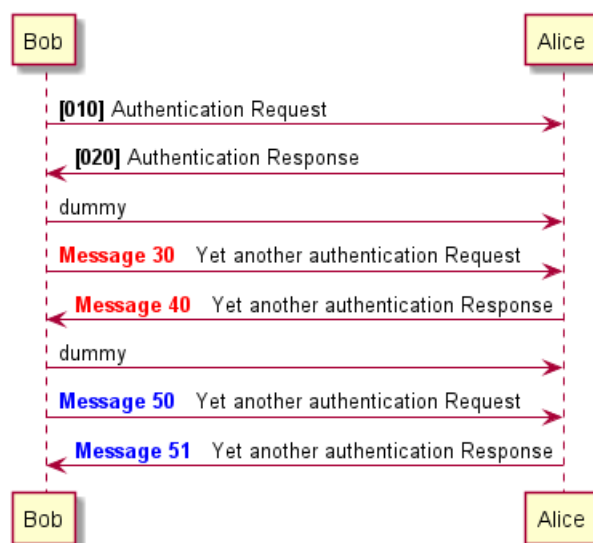

@startuml
autonumber 10 10 "<b>[000]"
Bob -> Alice : Authentication Request
Bob <- Alice : Authentication Response

autonumber stop
Bob -> Alice : dummy

autonumber resume "<font color=red><b>Message 0 "
Bob -> Alice : Yet another authentication Request
Bob <- Alice : Yet another authentication Response

autonumber stop
Bob -> Alice : dummy

autonumber resume 1 "<font color=blue><b>Message 0 "
Bob -> Alice : Yet another authentication Request
Bob <- Alice : Yet another authentication Response
@enduml
  
```

1.9 Page Title, Header and Footer

The `title` keyword is used to add a title to the page.

Pages can display headers and footers using **header** and **footer**.

```
@startuml
header Page Header
footer Page %page% of %lastpage%

title Example Title

Alice -> Bob : message 1
Alice -> Bob : message 2

@enduml
```

1.10 Splitting diagrams

The **newpage** keyword is used to split a diagram into several images.

You can put a title for the new page just after the **newpage** keyword. This title overrides the previously specified title if any.

This is very handy with *Word* to print long diagram on several pages.

(Note: this really does work. Only the first page is shown below, but it is a display artifact.)

```
@startuml

Alice -> Bob : message 1
Alice -> Bob : message 2

newpage

Alice -> Bob : message 3
Alice -> Bob : message 4

newpage A title for the\nlast page

Alice -> Bob : message 5
Alice -> Bob : message 6

@enduml
```

1.11 Grouping message

It is possible to group messages together using the following keywords:

- alt/else
- opt
- loop
- par
- break
- critical
- group, followed by a text to be displayed

It is possible to add a text that will be displayed into the header (for `group`, see next paragraph '*Secondary group label*').

The `end` keyword is used to close the group.

Note that it is possible to nest groups.

```
@startuml
Alice -> Bob: Authentication Request

alt successful case

    Bob -> Alice: Authentication Accepted

else some kind of failure

    Bob -> Alice: Authentication Failure
    group My own label
    Alice -> Log : Log attack start
        loop 1000 times
            Alice -> Bob: DNS Attack
        end
    Alice -> Log : Log attack end
end

else Another type of failure

    Bob -> Alice: Please repeat

end
@enduml
```

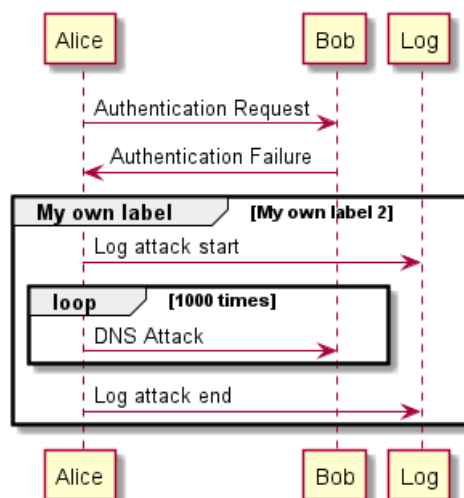

1.12 Secondary group label

For group, it is possible to add, between [and], a secondary text or label that will be displayed into the header.

```

@startuml
Alice -> Bob: Authentication Request
Bob -> Alice: Authentication Failure
group My own label [My own label 2]
    Alice -> Log : Log attack start
    loop 1000 times
        Alice -> Bob: DNS Attack
    end
    Alice -> Log : Log attack end
end
@enduml

```

[Ref. QA-2503]

1.13 Notes on messages

It is possible to put notes on message using the `note left` or `note right` keywords *just after the message*.

You can have a multi-line note using the `end note` keywords.

```
@startuml
Alice->Bob : hello
note left: this is a first note

Bob->Alice : ok
note right: this is another note

Bob->Bob : I am thinking
note left
a note
can also be defined
on several lines
end note
@enduml
```

1.14 Some other notes

It is also possible to place notes relative to participant with `note left of`, `note right of` or `note over` keywords.

It is possible to highlight a note by changing its background color.

You can also have a multi-line note using the `end note` keywords.

```
@startuml
participant Alice
participant Bob
note left of Alice #aqua
This is displayed
left of Alice.
end note

note right of Alice: This is displayed right of Alice.

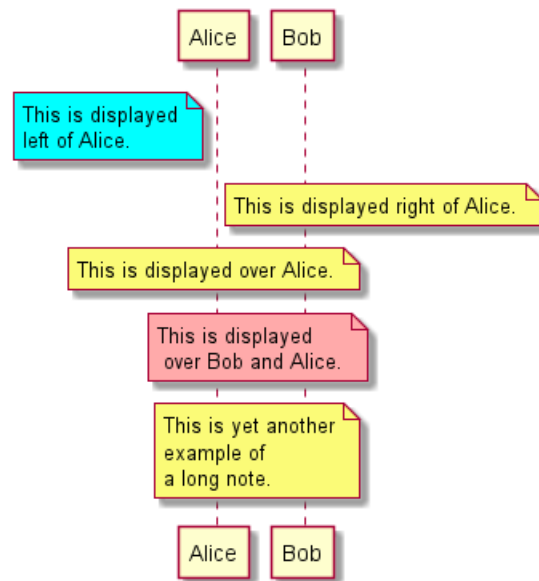

note over Alice: This is displayed over Alice.

note over Alice, Bob #FFAAAA: This is displayed\nover Bob and Alice.

note over Bob, Alice
This is yet another
example of
a long note.
```

```
end note
@enduml
```

1.15 Changing notes shape [hnote, rnote]

You can use `hnote` and `rnote` keywords to change note shapes :

- `hnote` for hexagonal note;
- `rnote` for rectangle note.

```
@startuml
caller -> server : conReq
hnote over caller : idle
caller <- server : conConf
rnote over server
  "r" as rectangle
  "h" as hexagon
endrnote
rnote over server
  this is
  on several
  lines
endrnote
hnote over caller
  this is
  on several
  lines
endhnote
@enduml
```

[Ref. QA-1765]

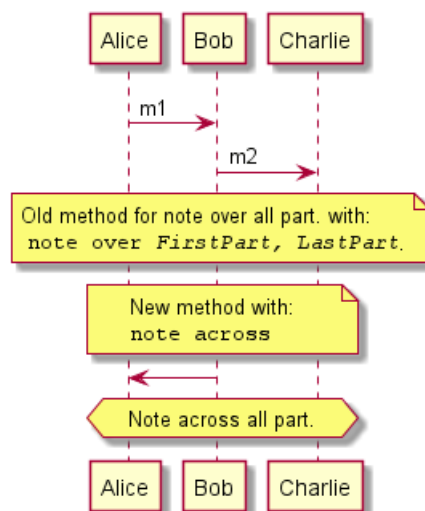

1.16 Note over all participants [across]

You can directly make a note over all participants, with the syntax:

- note across: note_description

```

@startuml
Alice->Bob:m1
Bob->Charlie:m2
note over Alice, Charlie: Old method for note over all part. with:\n ""note over //FirstPart, LastPart.
note across: New method with:\n""note across""
Bob->Alice
hnote across:Note across all part.
@enduml
  
```

[Ref. QA-9738]

1.17 Several notes aligned at the same level [/]

You can make several notes aligned at the same level, with the syntax /:

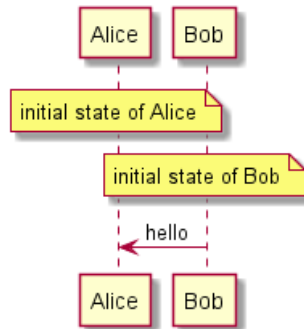

- without / (by default, the notes are not aligned)

```

@startuml
note over Alice : initial state of Alice
note over Bob : initial state of Bob
Bob -> Alice : hello
@enduml

```

- with / (the notes are aligned)

```

@startuml
note over Alice : initial state of Alice
/ note over Bob : initial state of Bob
Bob -> Alice : hello
@enduml

```

[Ref. QA-354]

1.18 Creole and HTML

It is also possible to use creole formatting:

```

@startuml
participant Alice
participant "The Famous Bob" as Bob

```

```

Alice -> Bob : hello --there--
... Some ~long delay~ ...
Bob -> Alice : ok
note left
  This is bold
  This is italics
  This is "monospaced"
  This is --stroked--
  This is underlined
  This is ~waved~
end note

```

```

Alice -> Bob : A displayed message
note right of Alice
  This is displayed
  __left of__ Alice.

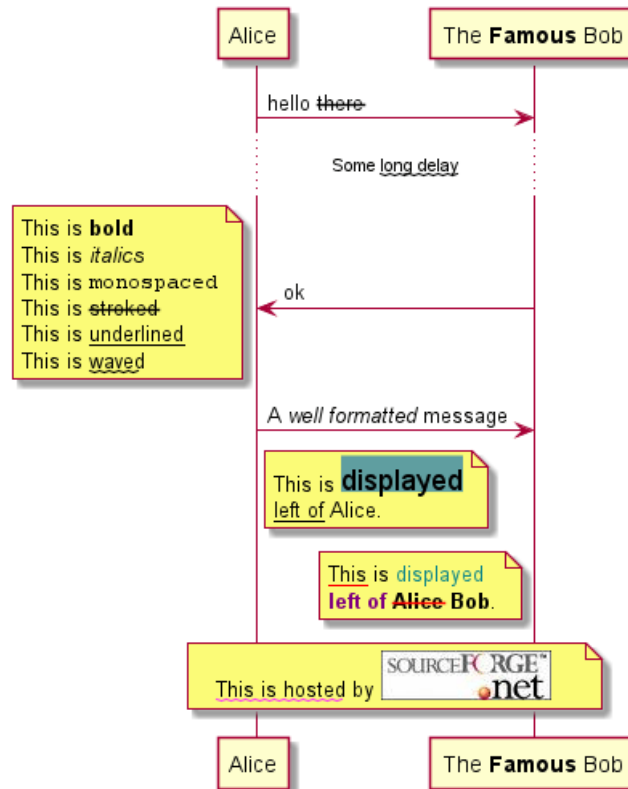

```

```

end note
note left of Bob
  <u:red>This</u> is <color #118888>displayed</color>
  **<color purple>left of</color> <s:red>Alice</strike> Bob**
end note
note over Alice, Bob
  <w:#FF33FF>This is hosted</w> by <img sourceforge.jpg>
end note
@enduml

```

1.19 Divider or separator

If you want, you can split a diagram using == separator to divide your diagram into logical steps.

```

@startuml

== Initialization ==

Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

== Repetition ==

Alice -> Bob: Another authentication Request
Alice <-- Bob: another authentication Response

@enduml

```

1.20 Reference

You can use reference in a diagram, using the keyword **ref** over.

```

@startuml
participant Alice
actor Bob

ref over Alice, Bob : init

Alice -> Bob : hello

ref over Bob
    This can be on
    several lines
end ref
@enduml
  
```

1.21 Delay

You can use `...` to indicate a delay in the diagram. And it is also possible to put a message with this delay.

```

@startuml
  
```

```

Alice -> Bob: Authentication Request
...
Bob --> Alice: Authentication Response
...5 minutes later...
Bob --> Alice: Good Bye !

```

```
@enduml
```

1.22 Text wrapping

To break long messages, you can manually add in your text.

Another option is to use `maxMessageSize` setting:

```

@startuml
skinparam maxMessageSize 50
participant a
participant b
a -> b :this\nis\nmanually\ndone
a -> b :this is a very long message on several words
@enduml

```

1.23 Space

You can use `|||` to indicate some spacing in the diagram.

It is also possible to specify a number of pixel to be used.

```
@startuml
```

```

Alice -> Bob: message 1
Bob --> Alice: ok
|||
Alice -> Bob: message 2
Bob --> Alice: ok
||45||
Alice -> Bob: message 3
Bob --> Alice: ok

@enduml

```

1.24 Lifeline Activation and Destruction

The `activate` and `deactivate` are used to denote participant activation.

Once a participant is activated, its lifeline appears.

The `activate` and `deactivate` apply on the previous message.

The `destroy` denote the end of the lifeline of a participant.

```

@startuml
participant User

User -> A: DoWork
activate A

A -> B: << createRequest >>
activate B

B -> C: DoWork
activate C
C --> B: WorkDone
destroy C

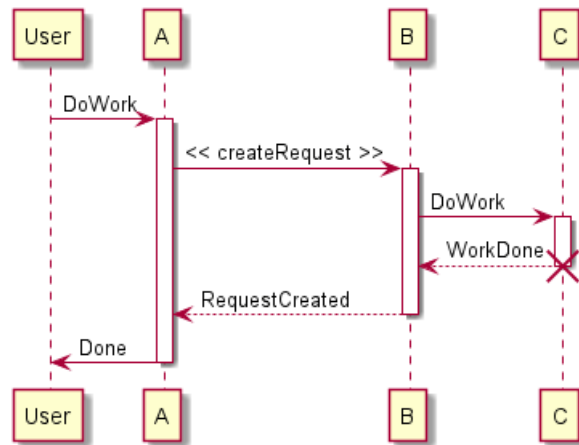

B --> A: RequestCreated
deactivate B

A -> User: Done
deactivate A

@enduml

```

Nested lifeline can be used, and it is possible to add a color on the lifeline.

```

@startuml
participant User

User -> A: DoWork
activate A #FFBBBB

A -> A: Internal call
activate A #DarkSalmon

A -> B: << createRequest >>
activate B

B --> A: RequestCreated
deactivate B
deactivate A
A -> User: Done
deactivate A

@enduml
  
```

Autoactivation is possible and works with the return keywords:

```

@startuml
autoactivate on
alice -> bob : hello
bob -> bob : self call
bill -> bob #005500 : hello from thread 2
bob -> george ** : create
return done in thread 2
  
```

```

return rc
bob -> george !! : delete
return success

@enduml

```

1.25 Return

Command **return** generates a return message with optional text label.

The return point is that which caused the most recent life-line activation.

The syntax is **return label** where **label** if provided is any string acceptable for conventional messages.

```

@startuml
Bob -> Alice : hello
activate Alice
Alice -> Alice : some action
return bye
@enduml

```

1.26 Participant creation

You can use the **create** keyword just before the first reception of a message to emphasize the fact that this message is actually *creating* this new object.

```

@startuml
Bob -> Alice : hello

```

```

create Other
Alice -> Other : new

create control String
Alice -> String
note right : You can also put notes!

Alice --> Bob : ok

@enduml

```

1.27 Shortcut syntax for activation, deactivation, creation

Immediately after specifying the target participant, the following syntax can be used:

- ++ Activate the target (optionally a #color may follow this)
- -- Deactivate the source
- ** Create an instance of the target
- !! Destroy an instance of the target

```

@startuml
alice -> bob ++ : hello
bob -> bob ++ : self call
bob -> bib ++ #005500 : hello
bob -> george ** : create
return done
return rc
bob -> george !! : delete
return success
@enduml

```

Then you can mix activation and deactivation, on same line:

```

@startuml
alice -> bob  ++  : hello1
bob    -> charlie  ---++  : hello2
charlie --> alice  --  : ok
@enduml

```

```

@startuml
@startuml
alice -> bob  ---++ #gold: hello
bob    -> alice  ---++ #gold: you too
alice -> bob  --: step1
alice -> bob  : step2
@enduml
@startuml

```

[Ref. QA-4834, QA-9573 and QA-13234]

1.28 Incoming and outgoing messages

You can use incoming or outgoing arrows if you want to focus on a part of the diagram.

Use square brackets to denote the left "[" or the right "]" side of the diagram.

```
@startuml
[-> A: DoWork

activate A

A -> A: Internal call
activate A

A ->] : << createRequest >>

A<--] : RequestCreated
deactivate A
[<- A: Done
deactivate A
@enduml
```

You can also have the following syntax:

```
@startuml
participant Alice
participant Bob #lightblue
Alice -> Bob
Bob -> Carol
...
[-> Bob
[o-> Bob
[o->o Bob
[x-> Bob
...
[<- Bob
[x<- Bob
...
Bob ->]
Bob ->o]
Bob o->o]
Bob ->x]
...
Bob <-]
```

```

Bob x<-]
@enduml

```

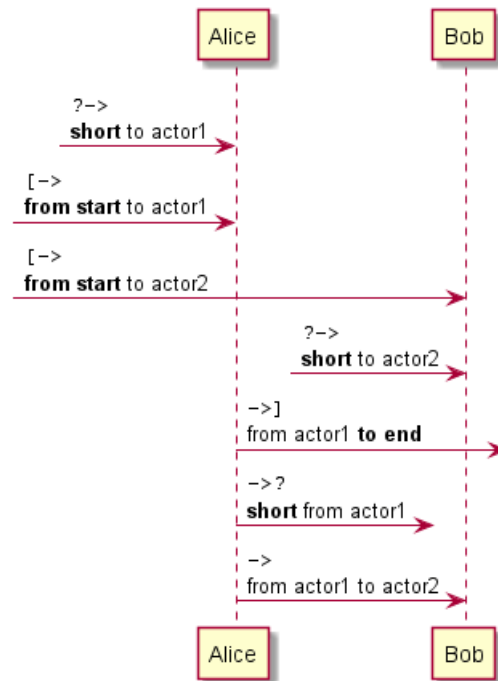

1.29 Short arrows for incoming and outgoing messages

You can have **short** arrows with using `?`.

```

@startuml
?-> Alice      : ""?->""\n**short** to actor1
[-> Alice      : ""[->""\n**from start** to actor1
[-> Bob        : ""[->""\n**from start** to actor2
?-> Bob        : ""?->""\n**short** to actor2
Alice ->]      : ""->""\nfrom actor1 **to end**
Alice ->?      : ""->?""\n**short** from actor1
Alice -> Bob   : ""->"" \nfrom actor1 to actor2
@enduml

```

[Ref. QA-310]

1.30 Anchors and Duration

With `teoz` usage it is possible to add anchors to the diagram and use the anchors to specify duration time.

```

@startuml
!pragma teoz true

{start} Alice -> Bob : start doing things during duration
Bob -> Max : something
Max -> Bob : something else
{end} Bob -> Alice : finish

{start} <-> {end} : some time

@enduml
  
```

1.31 Stereotypes and Spots

It is possible to add stereotypes to participants using `<<` and `>>`.

In the stereotype, you can add a spotted character in a colored circle using the syntax `(X,color)`.

```

@startuml
  
```

```

participant "Famous Bob" as Bob << Generated >>
participant Alice << (C,#ADD1B2) Testable >>

```

```

Bob->Alice: First message

```

```

@enduml

```

By default, the *guillemet* character is used to display the stereotype. You can change this behaviour using the skinparam *guillemet*:

```

@startuml

```

```

skinparam guillemet false
participant "Famous Bob" as Bob << Generated >>
participant Alice << (C,#ADD1B2) Testable >>

```

```

Bob->Alice: First message

```

```

@enduml

```

```

@startuml

```

```

participant Bob << (C,#ADD1B2) >>
participant Alice << (C,#ADD1B2) >>

```

```

Bob->Alice: First message

```

```

@enduml

```

1.32 More information on titles

You can use creole formatting in the title.

```

@startuml

title __Simple__ **communication** example

Alice -> Bob: Authentication Request
Bob -> Alice: Authentication Response

@enduml

```

Simple communication example

You can add newline using `\n` in the title description.

```

@startuml

title __Simple__ communication example\nnon several lines

Alice -> Bob: Authentication Request
Bob -> Alice: Authentication Response

@enduml

```

Simple communication example on several lines

You can also define title on several lines using `title` and `end title` keywords.

```

@startuml

title
  <u>Simple</u> communication example
  on <i>several</i> lines and using <font color=red>html</font>
  This is hosted by <img:sourceforge.jpg>
end title

Alice -> Bob: Authentication Request
Bob -> Alice: Authentication Response

@enduml

```

Simple communication example
on *several* lines and using **html**

This is hosted by 

1.33 Participants encompass

It is possible to draw a box around some participants, using `box` and `end box` commands.

You can add an optional title or a optional background color, after the `box` keyword.

```

@startuml

box "Internal Service" #LightBlue
    participant Bob
    participant Alice
end box
participant Other

Bob -> Alice : hello
Alice -> Other : hello

@enduml
  
```

1.34 Removing Foot Boxes

You can use the `hide footbox` keywords to remove the foot boxes of the diagram.

```

@startuml

hide footbox
title Foot Box removed

Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

@enduml
  
```

1.35 Skinparam

You can use the skinparam command to change colors and fonts for the drawing.

You can use this command:

- In the diagram definition, like any other commands,
- In an included file,
- In a configuration file, provided in the command line or the ANT task.

You can also change other rendering parameter, as seen in the following examples:

```

@startuml
skinparam sequenceArrowThickness 2
skinparam roundcorner 20
skinparam maxmessagesize 60
skinparam sequenceParticipant underline
  
```

```

actor User
participant "First Class" as A
participant "Second Class" as B
participant "Last Class" as C
  
```

```

User -> A: DoWork
activate A
  
```

```

A -> B: Create Request
activate B
  
```

```

B -> C: DoWork
activate C
C --> B: WorkDone
destroy C
  
```

```

B --> A: Request Created
deactivate B
  
```

```

A --> User: Done
deactivate A
  
```

```

@enduml
  
```

```

@startuml
skinparam backgroundColor #EEEBDC
skinparam handwritten true

skinparam sequence {
  ArrowColor DeepSkyBlue
  ActorBorderColor DeepSkyBlue
  LifeLineBorderColor blue
  LifeLineBackgroundColor #A9DCDF

  ParticipantBorderColor DeepSkyBlue
  ParticipantBackgroundColor DodgerBlue
  ParticipantFontName Impact
  ParticipantFontSize 17
  ParticipantFontColor #A9DCDF

  ActorBackgroundColor aqua
  ActorFontColor DeepSkyBlue
  ActorFontSize 17
  ActorFontName Apex
}

actor User
participant "First Class" as A
participant "Second Class" as B
participant "Last Class" as C

User -> A: DoWork
activate A

A -> B: Create Request
activate B

B -> C: DoWork
activate C
C --> B: WorkDone
destroy C

B --> A: Request Created
deactivate B

A --> User: Done
deactivate A
  
```

```

B --> A: Request Created
deactivate B

```

```

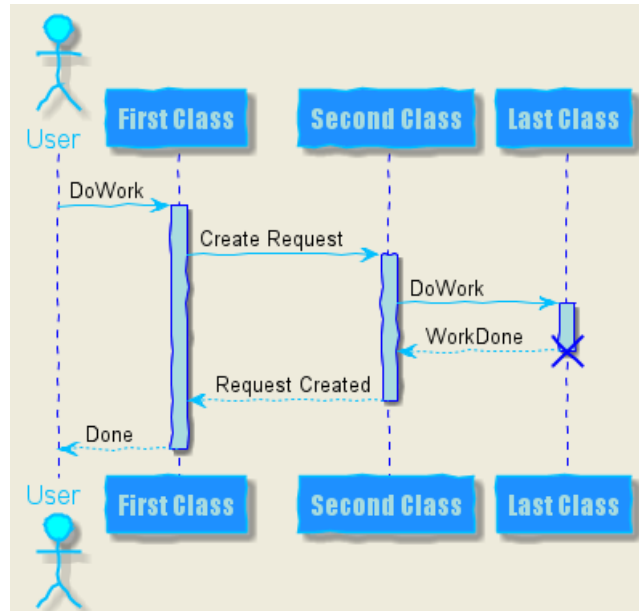

A --> User: Done
deactivate A

```

```

@enduml

```

1.36 Changing padding

It is possible to tune some padding settings.

```

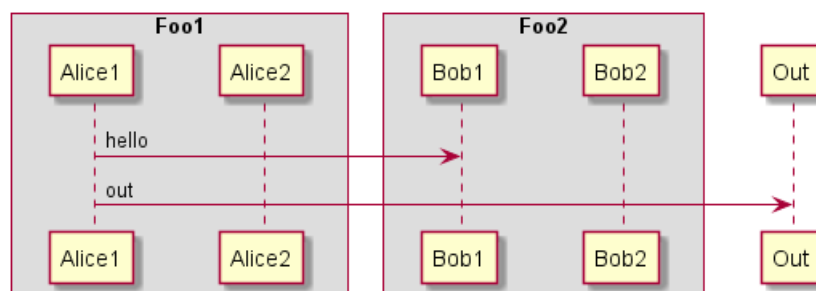

@startuml
skinparam ParticipantPadding 20
skinparam BoxPadding 10

```

```

box "Foo1"
participant Alice1
participant Alice2
end box
box "Foo2"
participant Bob1
participant Bob2
end box
Alice1 -> Bob1 : hello
Alice1 -> Out : out
@enduml

```

1.37 Appendix: Examples of all arrow type

1.37.1 Normal arrow

```

@startuml
participant Alice as a
participant Bob as b
a -> b : ""-> ""
a ->> b : ""->> ""
a -\ b : ""-\ ""
a -\\ b : ""-\\ ""
a -/ b : ""-/ ""
a -// b : ""-// ""
a ->x b : ""->x ""
a x-> b : ""x-> ""
a o-> b : ""o-> ""
a ->o b : ""->o ""
a o->o b : ""o->o ""
a <-> b : ""<-> ""
a o<->o b : ""o<->o ""
a x<->x b : ""x<->x ""
a ->>o b : ""->>o ""
a -\o b : ""-\o ""
a -\\o b : ""-\\o ""
a -/o b : ""-/o ""
a -//o b : ""-//o ""
a x->o b : ""x->o ""
@enduml

```

1.37.2 Incoming and outgoing messages (with '[', ']')

1.37.3 Incoming messages (with '[')

```

@startuml
participant Alice as a
participant Bob as b
[->      b : ""[->  ""
[->>     b : ""[->> ""
[-\       b : ""[-\   ""
[-\\      b : ""[-\\\\ ""
[-/       b : ""[-/   ""
[-//      b : ""[-//  ""
[->x     b : ""[->x  ""
[x->     b : ""[x->  ""
[o->     b : ""[o->  ""
[->o     b : ""[->o  ""
[o->o     b : ""[o->o ""
[<->     b : ""[<-> ""
[o<->o   b : ""[o<->o""
[x<->x   b : ""[x<->x""
[->>o    b : ""[->>o ""

```

```

[-\o      b : ""[-\o  ""
[-\\o     b : ""[-\\\\o""
[-/o      b : ""[-/o  ""
[-//o     b : ""[-//o ""
[x->o     b : ""[x->o ""
@enduml

```

1.37.4 Outgoing messages (with '']')

```

@startuml
participant Alice as a
participant Bob   as b
a ->]          : ""->]  ""
a ->>]         : ""->>]  ""
a -\]          : ""-\]   ""
a -\\]         : ""-\\]  ""
a -/]          : ""-/]   ""
a -//]         : ""-//]  ""
a ->x]        : ""->x]   ""
a x->]         : ""x->]   ""
a o->]         : ""o->]   ""
a ->o]         : ""->o]   ""

```

```

a o->o]      : ""o->o] ""
a <->]       : ""<->] ""
a o<->o]     : ""o<->o] ""
a x<->x]     : ""x<->x] ""
a ->>o]      : ""->>o] ""
a -\o]       : ""-\o] ""
a -\\o]      : ""-\\o] ""
a -/o]       : ""-/o] ""
a -//o]      : ""-//o] ""
a x->o]       : ""x->o] ""
@enduml

```

1.37.5 Short incoming and outgoing messages (with '?')

1.37.6 Short incoming (with '?')

```

@startuml
participant Alice as a
participant Bob as b
a -> b : //Long long label//
?-> b : ""?-> ""
?->> b : ""?->> ""

```

```

?-\      b : ""?-\    ""
?-\ \    b : ""?-\ \ \ \ ""
?-/      b : ""?-/    ""
?-//     b : ""?-//   ""
?->x     b : ""?->x    ""
?x->     b : ""?x->   ""
?o->     b : ""?o->   ""
?->o     b : ""?->o   ""
?o->o     b : ""?o->o  ""
?<->     b : ""?<->  ""
?o<->o   b : ""?o<->o""
?x<->x   b : ""?x<->x""
?->>o     b : ""?->>o  ""
?-\o     b : ""?-\o   ""
?-\ \o   b : ""?-\ \ \o ""
?-/o     b : ""?-/o   ""
?-//o    b : ""?-//o  ""
?x->o     b : ""?x->o  ""
@enduml

```

1.37.7 Short outgoing (with '?')

```

@startuml
participant Alice as a
participant Bob as b
a -> b : //Long long label//
a ->? : ""->? ""
a ->>? : ""->>? ""
a -\? : ""-\? ""
a -\\? : ""-\\? ""
a -/? : ""-/? ""
a -//? : ""-//? ""
a ->x? : ""->x? ""
a x->? : ""x->? ""
a o->? : ""o->? ""
a ->o? : ""->o? ""
a o->o? : ""o->o? ""
a <->? : ""<->? ""
a o<->o? : ""o<->o? ""
a x<->x? : ""x<->x? ""
a ->>o? : ""->>o? ""
a -\o? : ""-\o? ""
a -\\o? : ""-\\o? ""
a -/o? : ""-/o? ""
a -//o? : ""-//o? ""
a x->o? : ""x->o? ""
@enduml

```

1.38 Specific SkinParameter

1.38.1 By default

```
@startuml
Bob -> Alice : hello
Alice -> Bob : ok
@enduml
```

1.38.2 LifelineStrategy

- nosolid (*by default*)

```
@startuml
skinparam lifelineStrategy nosolid
Bob -> Alice : hello
Alice -> Bob : ok
@enduml
```

[Ref. QA-9016]

- solid

In order to have solid life line in sequence diagrams, you can use: `skinparam lifelineStrategy solid`

```
@startuml
skinparam lifelineStrategy solid
Bob -> Alice : hello
Alice -> Bob : ok
@enduml
```

[Ref. QA-2794]

1.38.3 style strictuml

To be conform to strict UML (*for arrow style: emits triangle rather than sharp arrowheads*), you can use:

- `skinparam style strictuml`

```
@startuml
skinparam style strictuml
Bob -> Alice : hello
Alice -> Bob : ok
@enduml
```

[Ref. QA-1047]

1.39 Hide unlinked participant

By default, all participants are displayed.

```
@startuml
participant Alice
participant Bob
participant Carol

Alice -> Bob : hello
@enduml
```

But you can hide unlinked participant.

```
@startuml
hide unlinked
participant Alice
participant Bob
participant Carol

Alice -> Bob : hello
@enduml
```

[Ref. QA-4247]

2 Use Case Diagram

Let's have a few examples:

2.1 Usecases

Use cases are enclosed using between parentheses (because two parentheses looks like an oval).

You can also use the **usecase** keyword to define a usecase. And you can define an alias, using the **as** keyword. This alias will be used later, when defining relations.

```
@startuml
(First usecase)
(Another usecase) as (UC2)
usecase UC3
usecase (Last\nusecase) as UC4
@enduml
```

2.2 Actors

The name defining an actor is enclosed between colons.

You can also use the **actor** keyword to define an actor. An alias can be assigned using the **as** keyword and can be used later instead of the actor's name, e. g. when defining relations.

You can see from the following examples, that the actor definitions are optional.

```
@startuml
:First Actor:
:Another\nactor: as Man2
actor Woman3
actor :Last actor: as Person1
@enduml
```

2.3 Change Actor style

You can change the actor style from stick man (*by default*) to:

- an awesome man with the `skinparam actorStyle awesome` command;
- a hollow man with the `skinparam actorStyle hollow` command.

2.3.1 Stick man (*by default*)

```
@startuml
:User: --> (Use)
"Main Admin" as Admin
"Use the application" as (Use)
Admin --> (Admin the application)
@enduml
```

2.3.2 Awesome man

```
@startuml
skinparam actorStyle awesome
:User: --> (Use)
"Main Admin" as Admin
"Use the application" as (Use)
Admin --> (Admin the application)
@enduml
```

[Ref. QA-10493]

2.3.3 Hollow man

```
@startuml
skinparam actorStyle Hollow
:User: --> (Use)
"Main Admin" as Admin
"Use the application" as (Use)
Admin --> (Admin the application)
@enduml
```

[Ref. PR#396]

2.4 Usecases description

If you want to have a description spanning several lines, you can use quotes.

You can also use the following separators:

- -- (dashes)
- .. (periods)
- == (equals)
- __ (underscores)

By using them pairwise and enclosing text between them, you can create separators with titles.

```
@startuml
```

```
usecase UC1 as "You can use
several lines to define your usecase.
You can also use separators.
--
```

```
Several separators are possible.
==
```

```
And you can add titles:
```

```
..Conclusion..
```

```
This allows large description."
```

```
@enduml
```

2.5 Use package

You can use packages to group actors or use cases.

```
@startuml
```

```
left to right direction
```

```
actor Guest as g
```

```
package Professional {
```

```
    actor Chef as c
```

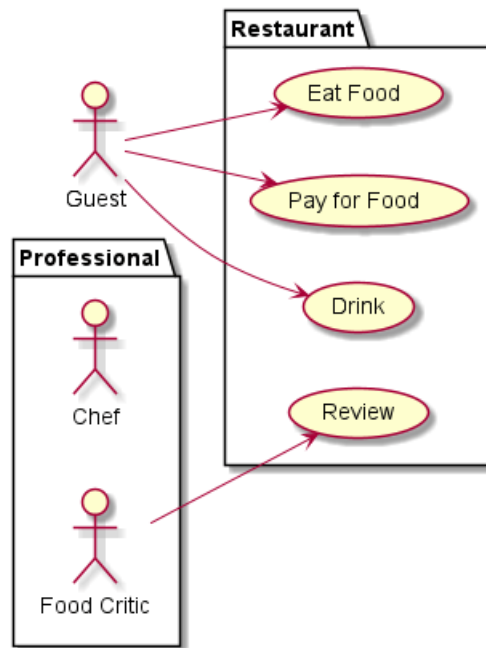

```
    actor "Food Critic" as fc
```

```

}
package Restaurant {
    usecase "Eat Food" as UC1
    usecase "Pay for Food" as UC2
    usecase "Drink" as UC3
    usecase "Review" as UC4
}
fc --> UC4
g --> UC1
g --> UC2
g --> UC3
@enduml

```

You can use `rectangle` to change the display of the package.

```

@startuml
left to right direction
actor "Food Critic" as fc
rectangle Restaurant {
    usecase "Eat Food" as UC1
    usecase "Pay for Food" as UC2
    usecase "Drink" as UC3
}
fc --> UC1
fc --> UC2
fc --> UC3
@enduml

```

2.6 Basic example

To link actors and use cases, the arrow --> is used.

The more dashes - in the arrow, the longer the arrow. You can add a label on the arrow, by adding a : character in the arrow definition.

In this example, you see that *User* has not been defined before, and is used as an actor.

```
@startuml
```

```
User -> (Start)
```

```
User --> (Use the application) : A small label
```

```
:Main Admin: ---> (Use the application) : This is\nyet another\nlabel
```

```
@enduml
```

2.7 Extension

If one actor/use case extends another one, you can use the symbol <|--.

```
@startuml
```

```
:Main Admin: as Admin
```

```
(Use the application) as (Use)
```

```
User <|-- Admin
```

```
(Start) <|-- (Use)
```

@enduml

2.8 Using notes

You can use the `note left of`, `note right of`, `note top of`, `note bottom of` keywords to define notes related to a single object.

A note can be also define alone with the `note` keywords, then linked to other objects using the `..` symbol.

@startuml

:Main Admin: as Admin

(Use the application) as (Use)

User -> (Start)

User --> (Use)

Admin ---> (Use)

note right of Admin : This is an example.

note right of (Use)

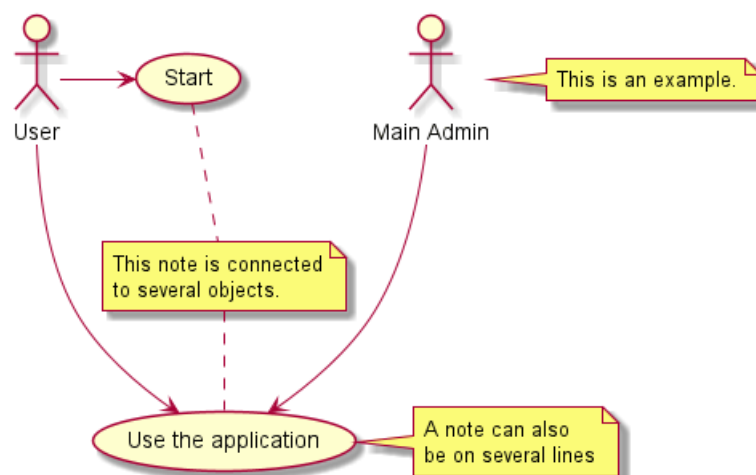

A note can also
be on several lines
end note

note "This note is connected\nto several objects." as N2

(Start) .. N2

N2 .. (Use)

@enduml

2.9 Stereotypes

You can add stereotypes while defining actors and use cases using << and >>.

```
@startuml
User << Human >>
:Main Database: as MySQL << Application >>
(Start) << One Shot >>
(Use the application) as (Use) << Main >>

User -> (Start)
User --> (Use)

MySQL --> (Use)

@enduml
```

2.10 Changing arrows direction

By default, links between classes have two dashes -- and are vertically oriented. It is possible to use horizontal link by putting a single dash (or dot) like this:

```
@startuml
:user: --> (Use case 1)
:user: -> (Use case 2)
@enduml
```

You can also change directions by reversing the link:

```
@startuml
(Use case 1) <.. :user:
(Use case 2) <- :user:
@enduml
```

It is also possible to change arrow direction by adding **left**, **right**, **up** or **down** keywords inside the arrow:

```

@startuml
:user: -left-> (dummyLeft)
:user: -right-> (dummyRight)
:user: -up-> (dummyUp)
:user: -down-> (dummyDown)
@enduml
  
```

You can shorten the arrow by using only the first character of the direction (for example, **-d-** instead of **-down-**) or the two first characters (**-do-**).

Please note that you should not abuse this functionality : *Graphviz* gives usually good results without tweaking.

And with the **left to right direction** parameter:

```

@startuml
left to right direction
:user: -left-> (dummyLeft)
:user: -right-> (dummyRight)
:user: -up-> (dummyUp)
:user: -down-> (dummyDown)
@enduml
  
```

2.11 Splitting diagrams

The `newpage` keywords to split your diagram into several pages or images.

```
@startuml
:actor1: --> (Usecase1)
newpage
:actor2: --> (Usecase2)
@enduml
```

2.12 Left to right direction

The general default behavior when building diagram is **top to bottom**.

```
@startuml
'default
top to bottom direction
user1 --> (Usecase 1)
user2 --> (Usecase 2)
@enduml
```

You may change to **left to right** using the `left to right direction` command. The result is often better with this direction.

```
@startuml
left to right direction
user1 --> (Usecase 1)
user2 --> (Usecase 2)
@enduml
```

2.13 Skinparam

You can use the skinparam command to change colors and fonts for the drawing.

You can use this command :

- In the diagram definition, like any other commands,
- In an included file,
- In a configuration file, provided in the command line or the ANT task.

You can define specific color and fonts for stereotyped actors and usecases.

```

@startuml
skinparam handwritten true

skinparam usecase {
  BackgroundColor DarkSeaGreen
  BorderColor DarkSlateGray

  BackgroundColor<< Main >> YellowGreen
  BorderColor<< Main >> YellowGreen

  ArrowColor Olive
  ActorBorderColor black
  ActorFontName Courier

  ActorBackgroundColor<< Human >> Gold
}

User << Human >>
:Main Database: as MySql << Application >>
(Start) << One Shot >>
(Use the application) as (Use) << Main >>

User -> (Start)
User --> (Use)

MySql --> (Use)

@enduml
  
```

2.14 Complete example

```

@startuml
left to right direction
skinparam packageStyle rectangle
actor customer
actor clerk
rectangle checkout {
  customer -- (checkout)
  (checkout) .> (payment) : include
  (help) .> (checkout) : extends
  (checkout) -- clerk
}
@enduml

```

2.15 Business Use Case

You can add / to make Business Use Case.

2.15.1 Business Usecase

```

@startuml

(First usecase)/
(Another usecase)/ as UC2
usecase/ UC3
usecase/ (Last\nusecase) as UC4

@enduml

```

2.15.2 Business Actor

@startuml

```

:First Actor:/
:Another\nactor:/ as Man2
actor/ Woman3
actor/ :Last actor: as Person1

```

@enduml

[Ref. QA-12179]

2.16 Change arrow color and style (inline style)

You can change the color or style of individual arrows using the inline following notation:

- #color;line.[bold|dashed|dotted];text:color

```

@startuml
actor foo
foo --> (bar) : normal
foo --> (bar1) #line:red;line.bold;text:red : red bold
foo --> (bar2) #green;line.dashed;text:green : green dashed
foo --> (bar3) #blue;line.dotted;text:blue : blue dotted
@enduml

```

[Ref. QA-3770 and QA-3816] [See similar feature on deployment-diagram or class diagram]

2.17 Change element color and style (inline style)

You can change the color or style of individual element using the following notation:

- `#[color|back:color];line:color;line.[bold|dashed|dotted];text:color`

```
@startuml
actor a
actor b #pink;line:red;line.bold;text:red
usecase c #palegreen;line:green;line.dashed;text:green
usecase d #aliceblue;line:blue;line.dotted;text:blue
@enduml
```

[Ref. QA-5340 and adapted from QA-6852]

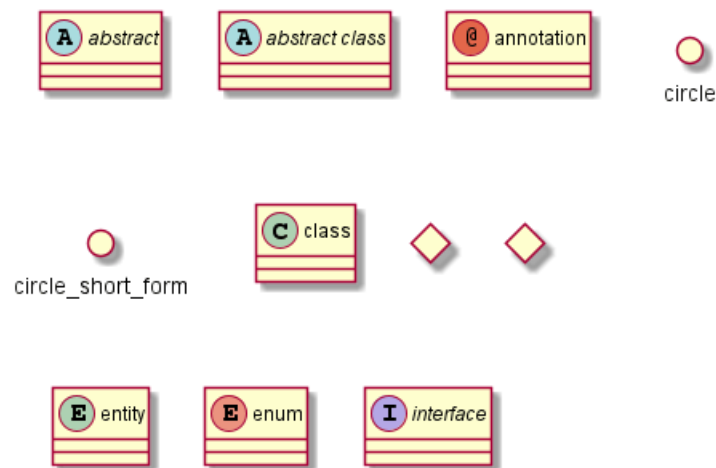

3 Class Diagram

3.1 Declaring element

```

@startuml
abstract      abstract
abstract class "abstract class"
annotation    annotation
circle        circle
()            circle_short_form
class         class
diamond       diamond
<>           diamond_short_form
entity        entity
enum          enum
interface     interface
@enduml

```

3.2 Relations between classes

Relations between classes are defined using the following symbols :

Type	Symbol	Drawing
Extension	< --	
Composition	*--	
Aggregation	o--	

It is possible to replace -- by .. to have a dotted line.

Knowing those rules, it is possible to draw the following drawings:

```

@startuml
Class01 <|-- Class02
Class03 *-- Class04
Class05 o-- Class06
Class07 .. Class08
Class09 -- Class10
@enduml

```

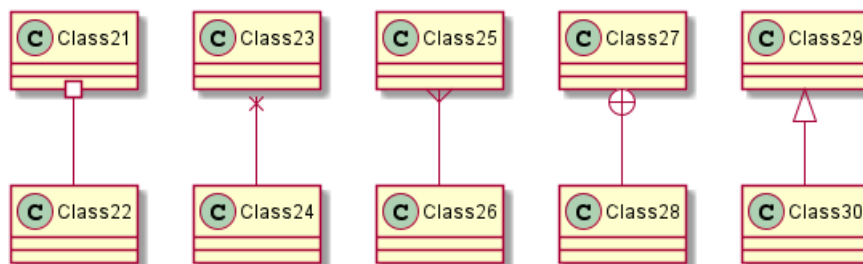

```
@startuml
Class11 <|.. Class12
Class13 --> Class14
Class15 ..> Class16
Class17 ..|> Class18
Class19 <--* Class20
@enduml
```

```
@startuml
Class21 #-- Class22
Class23 x-- Class24
Class25 }-- Class26
Class27 +-- Class28
Class29 ^-- Class30
@enduml
```

3.3 Label on relations

It is possible to add a label on the relation, using `:`, followed by the text of the label.

For cardinality, you can use double-quotes `"` on each side of the relation.

```
@startuml

Class01 "1" *-- "many" Class02 : contains

Class03 o-- Class04 : aggregation

Class05 --> "1" Class06

@enduml
```

You can add an extra arrow pointing at one object showing which object acts on the other object, using < or > at the begin or at the end of the label.

```
@startuml
class Car
```

```
Driver -> Car : drives >
Car *-- Wheel : have 4 >
Car --> Person : < owns
```

```
@enduml
```

3.4 Adding methods

To declare fields and methods, you can use the symbol : followed by the field's or method's name.

The system checks for parenthesis to choose between methods and fields.

```
@startuml
Object <|-- ArrayList
```

```
Object : equals()
ArrayList : Object[] elementData
ArrayList : size()
```

```
@enduml
```

It is also possible to group between brackets {} all fields and methods.

Note that the syntax is highly flexible about type/name order.

```
@startuml
class Dummy {
    String data
    void methods()
}

class Flight {
    flightNumber : Integer
    departureTime : Date
}
@enduml
```

You can use {field} and {method} modifiers to override default behaviour of the parser about fields and methods.

```
@startuml
class Dummy {
    {field} A field (despite parentheses)
    {method} Some method
}
@enduml
```

3.5 Defining visibility

When you define methods or fields, you can use characters to define the visibility of the corresponding item:

Character	Icon for field	Icon for method	Visibility
-	□	■	private
#	◇	◆	protected
~	△	▲	package private
+	○	●	public

```
@startuml
class Dummy {
    -field1
    #field2
    ~method1()
    +method2()
}
@enduml
```

You can turn off this feature using the `skinparam classAttributeIconSize 0` command :

```

@startuml
skinparam classAttributeIconSize 0
class Dummy {
    -field1
    #field2
    ~method1()
    +method2()
}
@enduml
  
```

3.6 Abstract and Static

You can define static or abstract methods or fields using the `{static}` or `{abstract}` modifier.

These modifiers can be used at the start or at the end of the line. You can also use `{classifier}` instead of `{static}`.

```

@startuml
class Dummy {
    {static} String id
    {abstract} void methods()
}
@enduml
  
```

3.7 Advanced class body

By default, methods and fields are automatically regrouped by PlantUML. You can use separators to define your own way of ordering fields and methods. The following separators are possible : `--` `..` `==` `__`.

You can also use titles within the separators:

```

@startuml
class Foo1 {
    You can use
    several lines
    ..
    as you want
    and group
    ==
}
  
```

```

things together.

--
You can have as many groups
as you want
--
End of class
}

class User {
.. Simple Getter ..
+ getName()
+ getAddress()
.. Some setter ..
+ setName()
__ private data __
int age
-- encrypted --
String password
}

@enduml

```

3.8 Notes and stereotypes

Stereotypes are defined with the **class** keyword, << and >>.

You can also define notes using **note left of**, **note right of**, **note top of**, **note bottom of** keywords.

You can also define a note on the last defined class using **note left**, **note right**, **note top**, **note bottom**.

A note can be also define alone with the **note** keywords, then linked to other objects using the **..** symbol.

```

@startuml
class Object << general >>
Object <|--- ArrayList

```

```

note top of Object : In java, every class\nextends this one.

```

```

note "This is a floating note" as N1
note "This note is connected\nto several objects." as N2
Object .. N2
N2 .. ArrayList

```

```

class Foo
note left: On last defined class

```

```

@enduml

```

3.9 More on notes

It is also possible to use few HTML tags (See Creole expression) like :

- ``
- `<u>`
- `<i>`
- `<s>`, ``, `<strike>`
- `` or ``
- `<color:#AAAAAA>` or `<color:colorName>`
- `<size:nn>` to change font size
- `` or `<img:file>`: the file must be accessible by the filesystem

You can also have a note on several lines.

You can also define a note on the last defined class using `note left`, `note right`, `note top`, `note bottom`.

```

@startuml

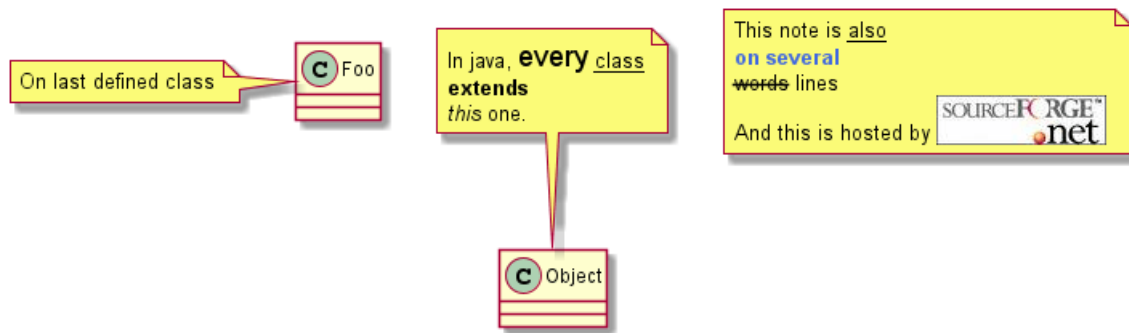

class Foo
note left: On last defined class

note top of Object
  In java, <size:18>every</size> <u>class</u>
  <b>extends</b>
  <i>this</i> one.
end note

note as N1
  This note is <u>also</u>
  <b><color:royalBlue>on several</color>
  <s>words</s> lines
  And this is hosted by <img:sourceforge.jpg>
end note
  
```

@enduml

3.10 Note on field (field, attribute, member) or method

It is possible to add a note on field (field, attribute, member) or on method.

3.10.1 Note on field or method

```

@startuml
class A {
{static} int counter
+void {abstract} start(int timeout)
}
note right of A::counter
  This member is annotated
end note
note right of A::start
  This method is now explained in a UML note
end note
@enduml
  
```

3.10.2 Note on method with the same name

```

@startuml
class A {
{static} int counter
+void {abstract} start(int timeoutms)
+void {abstract} start(Duration timeout)
}
note left of A::counter
  This member is annotated
end note
note right of A::"start(int timeoutms)"
  This method with int
end note
note right of A::"start(Duration timeout)"
  This method with Duration
end note
@enduml
  
```

[Ref. QA-3474 and QA-5835]

3.11 Note on links

It is possible to add a note on a link, just after the link definition, using `note on link`.

You can also use `note left on link`, `note right on link`, `note top on link`, `note bottom on link` if you want to change the relative position of the note with the label.

@startuml

```

class Dummy
Dummy --> Foo : A link
note on link #red: note that is red
  
```

```

Dummy --> Foo2 : Another link
note right on link #blue
this is my note on right link
and in blue
end note
  
```

@enduml

3.12 Abstract class and interface

You can declare a class as abstract using `abstract` or `abstract class` keywords.

The class will be printed in *italic*.

You can use the `interface`, `annotation` and `enum` keywords too.

@startuml

```

abstract class AbstractList
abstract AbstractCollection
interface List
interface Collection
  
```

```

List <|-- AbstractList
Collection <|-- AbstractCollection
  
```

```

Collection <|-- List
AbstractCollection <|-- AbstractList
  
```

```
AbstractList <|-- ArrayList
```

```
class ArrayList {
    Object[] elementData
    size()
}
```

```
enum TimeUnit {
    DAYS
    HOURS
    MINUTES
}
```

```
annotation SuppressWarnings
```

```
annotation Annotation {
    annotation with members
    String foo()
    String bar()
}
```

```
@enduml
```

[Ref. 'Annotation with members' Issue#458]

3.13 Using non-letters

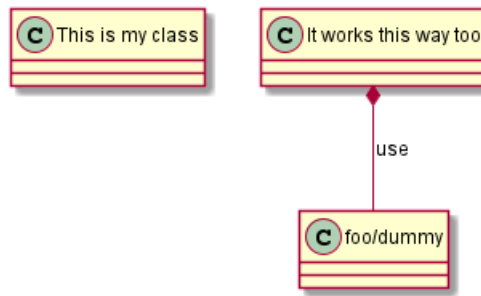

If you want to use non-letters in the class (or enum...) display, you can either :

- Use the `as` keyword in the class definition
- Put quotes `"` around the class name

```
@startuml
class "This is my class" as class1
class class2 as "It works this way too"

class2 *-- "foo/dummy" : use
@enduml
```

3.14 Hide attributes, methods...

You can parameterize the display of classes using the `hide/show` command.

The basic command is: `hide empty members`. This command will hide attributes or methods if they are empty.

Instead of `empty members`, you can use:

- `empty fields` or `empty attributes` for empty fields,
- `empty methods` for empty methods,
- `fields` or `attributes` which will hide fields, even if they are described,
- `methods` which will hide methods, even if they are described,
- `members` which will hide fields and methods, even if they are described,
- `circle` for the circled character in front of class name,
- `stereotype` for the stereotype.

You can also provide, just after the `hide` or `show` keyword:

- `class` for all classes,
- `interface` for all interfaces,
- `enum` for all enums,
- `<<foo1>>` for classes which are stereotyped with `foo1`,
- an existing class name.

You can use several `show/hide` commands to define rules and exceptions.

@startuml

```
class Dummy1 {
  +myMethods()
}
```

```
class Dummy2 {
  +hiddenMethod()
}
```

```
class Dummy3 <<Serializable>> {
String name
}
```

```
hide members
hide <<Serializable>> circle
show Dummy1 methods
show <<Serializable>> fields
```

@enduml

3.15 Hide classes

You can also use the **show/hide** commands to hide classes.

This may be useful if you define a large !included file, and if you want to hide some classes after file inclusion.

@startuml

```
class Foo1
class Foo2
```

```
Foo2 *-- Foo1
```

```
hide Foo2
```

@enduml

3.16 Remove classes

You can also use the **remove** commands to remove classes.

This may be useful if you define a large !included file, and if you want to remove some classes after file inclusion.

@startuml

```
class Foo1
class Foo2
```

```
Foo2 *-- Foo1
```

```
remove Foo2
```

@enduml

3.17 Hide or Remove unlinked class

By default, all classes are displayed:

```
@startuml
class C1
class C2
class C3
C1 -- C2
@enduml
```

But you can:

- hide @unlinked classes:

```
@startuml
class C1
class C2
class C3
C1 -- C2

hide @unlinked
@enduml
```

- or remove @unlinked classes:

```
@startuml
class C1
class C2
class C3
C1 -- C2

remove @unlinked
@enduml
```

[Adapted from QA-11052]

3.18 Use generics

You can also use bracket < and > to define generics usage in a class.

```

@startuml
class Foo<? extends Element> {
    int size()
}
Foo *- Element
@enduml
  
```

It is possible to disable this drawing using `skinparam genericDisplay old` command.

3.19 Specific Spot

Usually, a spotted character (C, I, E or A) is used for classes, interface, enum and abstract classes.

But you can define your own spot for a class when you define the stereotype, adding a single character and a color, like in this example:

```

@startuml
class System << (S,#FF7700) Singleton >>
class Date << (D,orchid) >>
@enduml
  
```

3.20 Packages

You can define a package using the **package** keyword, and optionally declare a background color for your package (Using a html color code or name).

Note that package definitions can be nested.

```

@startuml
package "Classic Collections" #DDDDDD {
    Object <|-- ArrayList
}
  
```

```

package net.sourceforge.plantuml {
    Object <|-- Demo1
    Demo1 *- Demo2
}

```

```
@enduml
```

3.21 Packages style

There are different styles available for packages.

You can specify them either by setting a default style with the command : `skinparam packageStyle`, or by using a stereotype on the package:

```

@startuml
scale 750 width
package foo1 <<Node>> {
    class Class1
}

package foo2 <<Rectangle>> {
    class Class2
}

package foo3 <<Folder>> {
    class Class3
}

package foo4 <<Frame>> {
    class Class4
}

package foo5 <<Cloud>> {
    class Class5
}

package foo6 <<Database>> {
    class Class6
}

@enduml

```

You can also define links between packages, like in the following example:

```
@startuml
skinparam packageStyle rectangle

package foo1.foo2 {
}

package foo1.foo2.foo3 {
    class Object
}

foo1.foo2 +-- foo1.foo2.foo3

@enduml
```

3.22 Namespaces

In packages, the name of a class is the unique identifier of this class. It means that you cannot have two classes with the very same name in different packages.

In that case, you should use namespaces instead of packages.

You can refer to classes from other namespaces by fully qualify them. Classes from the default namespace are qualified with a starting dot.

Note that you don't have to explicitly create namespace : a fully qualified class is automatically put in the right namespace.

```
@startuml
class BaseClass

namespace net.dummy #DDDDDD {
    .BaseClass <|-- Person
    Meeting o-- Person

    .BaseClass <|-- Meeting
}

namespace net.foo {
```

```

net.dummy.Person <|-- Person
.BaseClass <|-- Person

net.dummy.Meeting o-- Person
}

BaseClass <|-- net.unused.Person

@enduml

```

3.23 Automatic namespace creation

You can define another separator (other than the dot) using the command : `set namespaceSeparator ???`.

```

@startuml

set namespaceSeparator ::
class X1::X2::foo {
    some info
}

@enduml

```

You can disable automatic package creation using the command `set namespaceSeparator none`.

```

@startuml

set namespaceSeparator none
class X1.X2.foo {
    some info
}

@enduml

```

3.24 Lollipop interface

You can also define lollipop interface on classes, using the following syntax:

- `bar ()- foo`
- `bar ()-- foo`
- `foo -() bar`

```
@startuml
class foo
bar ()- foo
@enduml
```

3.25 Changing arrows direction

By default, links between classes have two dashes -- and are vertically oriented. It is possible to use horizontal link by putting a single dash (or dot) like this:

```
@startuml
Room o- Student
Room *-- Chair
@enduml
```

You can also change directions by reversing the link:

```
@startuml
Student -o Room
Chair --* Room
@enduml
```

It is also possible to change arrow direction by adding `left`, `right`, `up` or `down` keywords inside the arrow:

```
@startuml
foo -left-> dummyLeft
foo -right-> dummyRight
foo -up-> dummyUp
foo -down-> dummyDown
@enduml
```

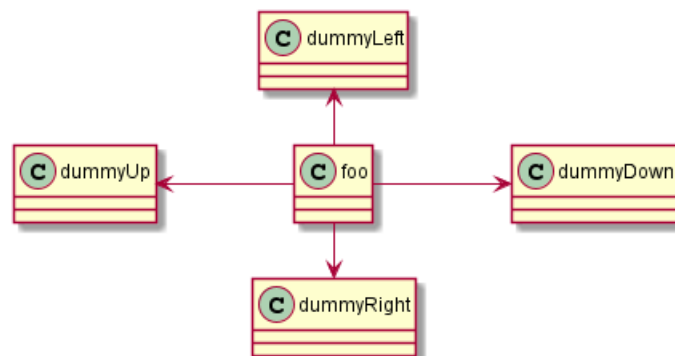

You can shorten the arrow by using only the first character of the direction (for example, `-d-` instead of `-down-`) or the two first characters (`-do-`).

Please note that you should not abuse this functionality : *Graphviz* gives usually good results without tweaking.

And with the `left to right direction` parameter:

```

@startuml
left to right direction
foo -left-> dummyLeft
foo -right-> dummyRight
foo -up-> dummyUp
foo -down-> dummyDown
@enduml
  
```

3.26 Association classes

You can define *association class* after that a relation has been defined between two classes, like in this example:

```

@startuml
class Student {
    Name
}
Student "0..*" -- "1..*" Course
(Student, Course) .. Enrollment

class Enrollment {
    drop()
    cancel()
}
@enduml
  
```

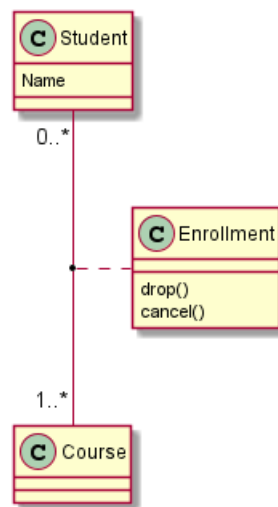

You can define it in another direction:

```

@startuml
class Student {
    Name
}
Student "0..*" -- "1..*" Course
(Student, Course) . Enrollment

class Enrollment {
    drop()
    cancel()
}
@enduml
  
```

3.27 Association on same classe

```

@startuml
class Station {
    +name: string
}

class StationCrossing {
    +cost: TimeInterval
}

<> diamond

StationCrossing . diamond
diamond - "from 0..*" Station
  
```

```
diamond - "to 0..*" Station
@enduml
```

[Ref. Incubation: Associations]

3.28 Skinparam

You can use the skinparam command to change colors and fonts for the drawing.

You can use this command :

- In the diagram definition, like any other commands,
- In an included file,
- In a configuration file, provided in the command line or the ANT task.

```
@startuml

skinparam class {
  BackgroundColor PaleGreen
  ArrowColor SeaGreen
  BorderColor SpringGreen
}
skinparam stereotypeCBackgroundColor YellowGreen

Class01 "1" *-- "many" Class02 : contains

Class03 o-- Class04 : aggregation

@enduml
```

```
Class01 "1" *-- "many" Class02 : contains
```

```
Class03 o-- Class04 : aggregation
```

```
@enduml
```

3.29 Skinned Stereotypes

You can define specific color and fonts for stereotyped classes.

```
@startuml

skinparam class {
  BackgroundColor PaleGreen
  ArrowColor SeaGreen
  BorderColor SpringGreen
  BackgroundColor<<Foo>> Wheat
  BorderColor<<Foo>> Tomato
}
skinparam stereotypeCBackgroundColor YellowGreen
skinparam stereotypeCBackgroundColor<< Foo >> DimGray
```

```

Class01 <<Foo>>
Class03 <<Foo>>
Class01 "1" *-- "many" Class02 : contains

Class03 o-- Class04 : aggregation

@enduml

```

3.30 Color gradient

You can declare individual colors for classes, notes etc using the `#` notation.

You can use standard color names or RGB codes in various notations, see Colors.

You can also use color gradient for background colors, with the following syntax: two colors names separated either by:

- |,
- /,
- \, or
- -

depending on the direction of the gradient.

For example:

```

@startuml

skinparam backgroundcolor AntiqueWhite/Gold
skinparam classBackgroundColor Wheat|CornflowerBlue

class Foo #red-green
note left of Foo #blue\9932CC
    this is my
    note on this class
end note

package example #GreenYellow/LightGoldenRodYellow {
    class Dummy
}

@enduml

```

3.31 Help on layout

Sometimes, the default layout is not perfect...

You can use **together** keyword to group some classes together : the layout engine will try to group them (as if they were in the same package).

You can also use **hidden** links to force the layout.

```
@startuml
class Bar1
class Bar2
together {
    class Together1
    class Together2
    class Together3
}
Together1 - Together2
Together2 - Together3
Together2 -[hidden]--> Bar1
Bar1 -[hidden]> Bar2
@enduml
```

3.32 Splitting large files

Sometimes, you will get some very large image files.

You can use the **page (hpages)x(vpages)** command to split the generated image into several files :

hpages is a number that indicated the number of horizontal pages, and **vpages** is a number that indicated the number of vertical pages.

You can also use some specific **skinparam** settings to put borders on splitted pages (see example).

```
@startuml
' Split into 4 pages
page 2x2
skinparam pageMargin 10
skinparam pageExternalColor gray
skinparam pageBorderColor black

class BaseClass

namespace net.dummy #DDDDDD {
    .BaseClass <|-- Person
    Meeting o-- Person
}
```

```

.BaseClass <|-- Meeting
}

namespace net.foo {
  net.dummy.Person <|-- Person
  .BaseClass <|-- Person

  net.dummy.Meeting o-- Person
}

BaseClass <|-- net.unused.Person
@enduml

```

3.33 Extends and implements

It is also possible to use `extends` and `implements` keywords.

```

@startuml
class ArrayList implements List
class ArrayList extends AbstractList
@enduml

```

3.34 Bracketed relations (linking or arrow) style

3.34.1 Line style

It's also possible to have explicitly **bold**, **dashed**, **dotted**, **hidden** or **plain** relation, links or arrows:

- without label

```

@startuml
title Bracketed line style without label
class foo
class bar
bar1 : [bold]
bar2 : [dashed]
bar3 : [dotted]

```

```

bar4 : [hidden]
bar5 : [plain]

foo --> bar
foo -[bold]-> bar1
foo -[dashed]-> bar2
foo -[dotted]-> bar3
foo -[hidden]-> bar4
foo -[plain]-> bar5
@enduml

```

Bracketed line style without label

- with label

```

@startuml
title Bracketed line style with label
class foo
class bar
bar1 : [bold]
bar2 : [dashed]
bar3 : [dotted]
bar4 : [hidden]
bar5 : [plain]

foo --> bar : 
foo -[bold]-> bar1 : [bold]
foo -[dashed]-> bar2 : [dashed]
foo -[dotted]-> bar3 : [dotted]
foo -[hidden]-> bar4 : [hidden]
foo -[plain]-> bar5 : [plain]

@enduml

```

Bracketed line style with label

[Adapted from QA-4181]

3.34.2 Line color

```

@startuml

```

```

title Bracketed line color
class foo
class bar
bar1 : [#red]
bar2 : [#green]
bar3 : [#blue]

foo --> bar
foo -[#red]-> bar1 : [#red]
foo -[#green]-> bar2 : [#green]
foo -[#blue]-> bar3 : [#blue]
'foo -[#blue;#yellow;#green]-> bar4
@enduml

```

3.34.3 Line thickness

```

@startuml
title Bracketed line thickness
class foo
class bar
bar1 : [thickness=1]
bar2 : [thickness=2]
bar3 : [thickness=4]
bar4 : [thickness=8]
bar5 : [thickness=16]

foo --> bar :
foo -[thickness=1]-> bar1 : [1]
foo -[thickness=2]-> bar2 : [2]
foo -[thickness=4]-> bar3 : [4]
foo -[thickness=8]-> bar4 : [8]
foo -[thickness=16]-> bar5 : [16]

@enduml

```

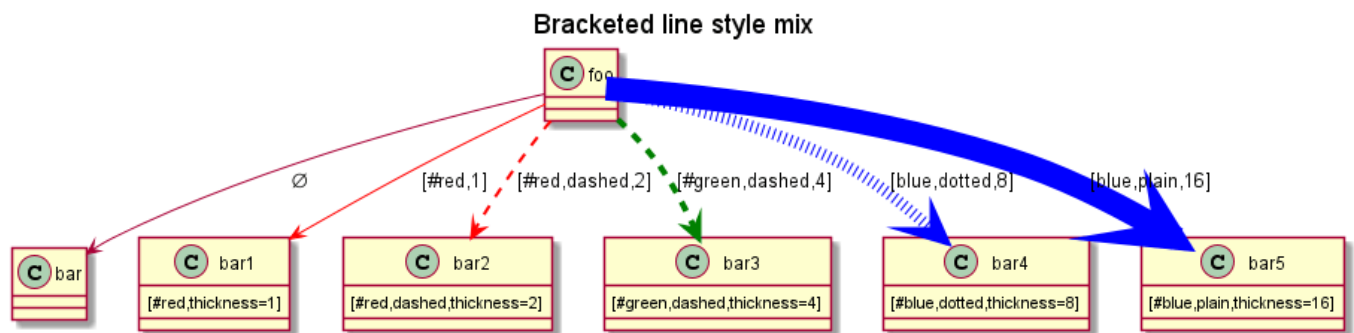

[Ref. QA-4949]

3.34.4 Mix

```
@startuml
title Bracketed line style mix
class foo
class bar
bar1 : [#red,thickness=1]
bar2 : [#red,dashed,thickness=2]
bar3 : [#green,dashed,thickness=4]
bar4 : [#blue,dotted,thickness=8]
bar5 : [#blue,plain,thickness=16]

foo --> bar
foo -[#red,thickness=1]-> bar1 : [#red,1]
foo -[#red,dashed,thickness=2]-> bar2 : [#red,dashed,2]
foo -[#green,dashed,thickness=4]-> bar3 : [#green,dashed,4]
foo -[#blue,dotted,thickness=8]-> bar4 : [blue,dotted,8]
foo -[#blue,plain,thickness=16]-> bar5 : [blue,plain,16]
@enduml
```

3.35 Change relation (linking or arrow) color and style (inline style)

You can change the color or style of individual relation or arrows using the inline following notation:

- #color;line.[bold|dashed|dotted];text:color

```
@startuml
class foo
class bar
foo --> bar : normal
foo --> bar1 #line:red;line.bold;text:red : red bold
foo --> bar2 #green;line.dashed;text:green : green dashed
foo --> bar3 #blue;line.dotted;text:blue : blue dotted
@enduml
```

[See similar feature on deployment]

3.36 Change class color and style (inline style)

You can change the color or style of individual class using the following notation:

- `#[color|back:color];header:color;line:color;line.[bold|dashed|dotted];text:color`

```
@startuml
abstract    abstract
annotation  annotation #pink;line:red;line.bold;text:red
class       class      #palegreen;line:green;line.dashed;text:green
interface   interface  #aliceblue;line:blue;line.dotted;text:blue
@enduml
```

First original example:

```
@startuml
class bar #line:green;back:lightblue
class bar2 #lightblue;line:green

class Foo1 #back:red;line:00FFFF
class FooDashed #line.dashed:blue
class FooDotted #line.dotted:blue
class FooBold #line.bold
class Demo1 #back:lightgreen|yellow;header:blue/red
@enduml
```

[Ref. QA-3770]

3.37 Arrows from/to class members

```
@startuml
class Foo {
+ field1
+ field2
}

class Bar {
```

```

+ field3
+ field4
}

```

```

Foo::field1 --> Bar::field3 : foo
Foo::field2 --> Bar::field4 : bar
@enduml

```

[Ref. QA-3636]

```

@startuml
left to right direction

```

```

class User {
    id : INTEGER
    ..
    other_id : INTEGER
}

```

```

class Email {
    id : INTEGER
    ..
    user_id : INTEGER
    address : INTEGER
}

```

```

User::id *-- Email::user_id
@enduml

```

[Ref. QA-5261]

4 Object Diagram

4.1 Definition of objects

You define instance of objects using the `object` keywords.

```
@startuml
object firstObject
object "My Second Object" as o2
@enduml
```

4.2 Relations between objects

Relations between objects are defined using the following symbols :

Type	Symbol	Image
Extension	< --	
Composition	*--	
Aggregation	o--	

It is possible to replace `--` by `..` to have a dotted line.

Knowing those rules, it is possible to draw the following drawings.

It is possible to add a label on the relation, using `:` followed by the text of the label.

For cardinality, you can use double-quotes `"` on each side of the relation.

```
@startuml
object Object01
object Object02
object Object03
object Object04
object Object05
object Object06
object Object07
object Object08

Object01 <|-- Object02
Object03 *-- Object04
Object05 o-- "4" Object06
Object07 .. Object08 : some labels
@enduml
```

4.3 Associations objects

```
@startuml
object o1
object o2
diamond dia
```

```

object o3

o1 --> dia
o2 --> dia
dia --> o3
@enduml

```

4.4 Adding fields

To declare fields, you can use the symbol `:` followed by the field's name.

```

@startuml

object user

user : name = "Dummy"
user : id = 123

@enduml

```

It is also possible to group all fields between brackets `{}`.

```

@startuml

object user {
    name = "Dummy"
    id = 123
}

@enduml

```

4.5 Common features with class diagrams

- Hide attributes, methods...
- Defines notes
- Use packages
- Skin the output

4.6 Map table or associative array

You can define a map table or associative array, with `map` keyword and `=>` separator.

```
@startuml
map CapitalCity {
  UK => London
  USA => Washington
  Germany => Berlin
}
@enduml
```

CapitalCity	
UK	London
USA	Washington
Germany	Berlin

```
@startuml
map "Map **Contry => CapitalCity**" as CC {
  UK => London
  USA => Washington
  Germany => Berlin
}
@enduml
```

Map Contry => CapitalCity	
UK	London
USA	Washington
Germany	Berlin

```
@startuml
map "map: Map<Integer, String>" as users {
  1 => Alice
  2 => Bob
  3 => Charlie
}
@enduml
```

map: Map<Integer, String>	
1	Alice
2	Bob
3	Charlie

And add link with object.

```
@startuml
object London

map CapitalCity {
  UK *-> London
  USA => Washington
  Germany => Berlin
}
@enduml
```

```
@startuml
object London
```

```
object Washington
object Berlin
object NewYork

map CapitalCity {
  UK *-> London
  USA *--> Washington
  Germany *---> Berlin
}

NewYork --> CapitalCity::USA
@enduml
```

[Ref. #307]

5 Activity Diagram (legacy)

This is the old **Activity Diagram (legacy)** syntax, to see the new current version see: **Activity Diagram (new)**.

5.1 Simple Action

You can use (*) for the starting point and ending point of the activity diagram.

In some occasion, you may want to use (*top) to force the starting point to be at the top of the diagram.

Use --> for arrows.

```
@startuml
(*) --> "First Action"
"First Action" --> (*)
@enduml
```

5.2 Label on arrows

By default, an arrow starts at the last used activity.

You can put a label on an arrow using brackets [and] just after the arrow definition.

```
@startuml
(*) --> "First Action"
-->[You can put also labels] "Second Action"
--> (*)
@enduml
```

5.3 Changing arrow direction

You can use -> for horizontal arrows. It is possible to force arrow's direction using the following syntax:

- -down-> (default arrow)

- -right-> or ->
- -left->
- -up->

```
@startuml
```

```
(*) -up-> "First Action"
-right-> "Second Action"
--> "Third Action"
-left-> (*)
```

```
@enduml
```

5.4 Branches

You can use if/then/else keywords to define branches.

```
@startuml
```

```
(*) --> "Initialization"
```

```
if "Some Test" then
```

```
  -->[true] "Some Action"
```

```
  --> "Another Action"
```

```
  -right-> (*)
```

```
else
```

```
  ->[false] "Something else"
```

```
  -->[Ending process] (*)
```

```
endif
```

```
@enduml
```

Unfortunately, you will have to sometimes repeat the same activity in the diagram text:

```

@startuml
(*) --> "check input"
If "input is verbose" then
--> [Yes] "turn on verbosity"
--> "run command"
else
--> "run command"
Endif
-->(*)
@enduml

```

5.5 More on Branches

By default, a branch is connected to the last defined activity, but it is possible to override this and to define a link with the `if` keywords.

It is also possible to nest branches.

```

@startuml
(*) --> if "Some Test" then

-->[true] "action 1"

if "" then
-> "action 3" as a3
else
if "Other test" then
-left-> "action 5"
else
--> "action 6"
endif
endif

else

->[false] "action 2"

endif

```

```

a3 --> if "last test" then
  --> "action 7"
else
  -> "action 8"
endif

@enduml

```

5.6 Synchronization

You can use `=== code ===` to display synchronization bars.

```

@startuml

(*) --> ===B1===
--> "Parallel Action 1"
--> ===B2===

===B1=== --> "Parallel Action 2"
--> ===B2===

--> (*)

@enduml

```

5.7 Long action description

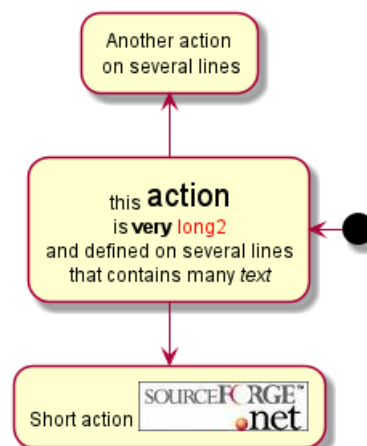

When you declare activities, you can span on several lines the description text. You can also add in the description.

You can also give a short code to the activity with the `as` keyword. This code can be used latter in the diagram description.

```
@startuml
(*) -left-> "this <size:20>action</size>
is <b>very</b> <color:red>long2</color>
and defined on several lines
that contains many <i>text</i>" as A1

-up-> "Another action\n on several lines"

A1 --> "Short action <img:sourceforge.jpg>"
@enduml
```

5.8 Notes

You can add notes on a activity using the commands `note left`, `note right`, `note top` or `note bottom`, just after the description of the activity you want to note.

If you want to put a note on the starting point, define the note at the very beginning of the diagram description.

You can also have a note on several lines, using the `endnote` keywords.

```
@startuml
```

```

(*) --> "Some action"
note right: This action has to be defined
"Some action" --> (*)
note left
  This note is on
  several lines
end note

@enduml

```

5.9 Partition

You can define a partition using the **partition** keyword, and optionally declare a background color for your partition (Using a html color code or name)

When you declare activities, they are automatically put in the last used partition.

You can close the partition definition using a closing bracket **}**.

```

@startuml

partition Conductor {
  (*) --> "Climbs on Platform"
  --> === S1 ===
  --> Bows
}

partition Audience #LightSkyBlue {
  === S1 === --> Applauds
}

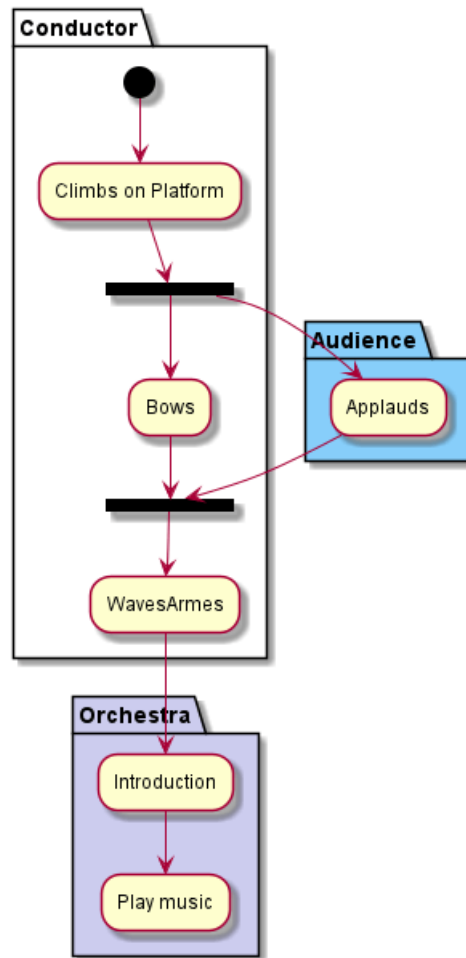

partition Conductor {
  Bows --> === S2 ===
  --> WavesArmes
  Applauds --> === S2 ===
}

partition Orchestra #CCCCEE {
  WavesArmes --> Introduction
  --> "Play music"
}

@enduml

```

5.10 Skinparam

You can use the skinparam command to change colors and fonts for the drawing.

You can use this command :

- In the diagram definition, like any other commands,
- In an included file,
- In a configuration file, provided in the command line or the ANT task.

You can define specific color and fonts for stereotyped activities.

@startuml

```

skinparam backgroundColor #AAFFFF
skinparam activity {
  StartColor red
  BarColor SaddleBrown
  EndColor Silver
  BackgroundColor Peru
  BackgroundColor<< Begin >> Olive
  BorderColor Peru
  FontName Impact
}

(*) --> "Climbs on Platform" << Begin >>
--> === S1 ===
--> Bows

```

```

--> === S2 ===
--> WavesArmes
--> (*)

@enduml

```

5.11 Octagon

You can change the shape of activities to octagon using the `skinparam activityShape octagon` command.

```

@startuml
'Default is skinparam activityShape roundBox
skinparam activityShape octagon

(*) --> "First Action"
"First Action" --> (*)

@enduml

```

5.12 Complete example

```

@startuml
title Servlet Container

(*) --> "ClickServlet.handleRequest()"
--> "new Page"

```

```
if "Page.onSecurityCheck" then
  ->[true] "Page.onInit()"

  if "isForward?" then
    ->[no] "Process controls"

    if "continue processing?" then
      -->[yes] ===RENDERING===
    else
      -->[no] ===REDIRECT_CHECK===
    endif

  else
    -->[yes] ===RENDERING===
  endif

  if "is Post?" then
    -->[yes] "Page.onPost()"
    --> "Page.onRender()" as render
    --> ===REDIRECT_CHECK===
  else
    -->[no] "Page.onGet()"
    --> render
  endif

else
  -->[false] ===REDIRECT_CHECK===
endif

if "Do redirect?" then
  ->[yes] "redirect request"
  --> ==BEFORE_DESTROY==
else
  if "Do Forward?" then
    -left->[yes] "Forward request"
    --> ==BEFORE_DESTROY==
  else
    -right->[no] "Render page template"
    --> ==BEFORE_DESTROY==
  endif
endif

--> "Page.onDestroy()"
-->(*)

@enduml
```

6 Activity Diagram (new)

Old syntax for activity diagram had several limitations and drawbacks (for example, it's difficult to maintain).

So a completely new syntax and implementation is now available to users. Another advantage of this implementation is that it's done without the need of having Graphviz installed (as for sequence diagrams).

This syntax will replace the old legacy one. However, for compatibility reason, the old syntax will still be recognized, to ensure *ascending compatibility*.

Users are simply encouraged to migrate to the new syntax.

6.1 Simple action

Activities label starts with `:` and ends with `;`.

Text formatting can be done using creole wiki syntax.

They are implicitly linked in their definition order.

```
@startuml
:Hello world;
:This is defined on
several lines;
@enduml
```

6.2 Start/Stop/End

You can use `start` and `stop` keywords to denote the beginning and the end of a diagram.

```
@startuml
start
:Hello world;
:This is defined on
several lines;
stop
@enduml
```

You can also use the `end` keyword.

```
@startuml
start
:Hello world;
:This is defined on
```

```

several **lines**;  

end  

@enduml

```

6.3 Conditional

You can use `if`, `then` and `else` keywords to put tests in your diagram. Labels can be provided using parentheses.

The 3 syntaxes are possible:

- `if (...) then (...)`

```

@startuml

start

if (Graphviz installed?) then (yes)
    :process all\ndiagrams;
else (no)
    :process only
    __sequence__ and __activity__ diagrams;
endif

stop

@enduml

```

- `if (...) is (...) then`

```

@startuml
if (color?) is (<color:red>red) then
    :print red;
else
    :print not red;
endif
@enduml

```

- if (...) equals (...) then

```

@startuml
if (counter?) equals (5) then
:print 5;
else
:print not 5;
@enduml
  
```

[Ref. QA-301]

6.3.1 Several tests (horizontal mode)

You can use the `elseif` keyword to have several tests (*by default, it is the horizontal mode*):

```

@startuml
start
if (condition A) then (yes)
:Text 1;
elseif (condition B) then (yes)
:Text 2;
stop
elseif (condition C) then (yes)
:Text 3;
elseif (condition D) then (yes)
:Text 4;
else (nothing)
:Text else;
endif
stop
@enduml
  
```

6.3.2 Several tests (vertical mode)

You can use the command `!pragma useVerticalIf on` to have the tests in vertical mode:

```
@startuml
!pragma useVerticalIf on
start
if (condition A) then (yes)
  :Text 1;
elseif (condition B) then (yes)
  :Text 2;
  stop
elseif (condition C) then (yes)
  :Text 3;
elseif (condition D) then (yes)
  :Text 4;
else (nothing)
  :Text else;
endif
stop
@enduml
```

[Ref. QA-3931]

6.4 Conditional with stop on an action [kill, detach]

You can stop action on a if loop.

```
@startuml
if (condition?) then
  :error;
  stop
endif
```

```

endif
#palegreen:action;
@enduml

```

But if you want to stop at an precise action, you can use the `kill` or `detach` keyword:

- `kill`

```

@startuml
if (condition?) then
    #pink:error;
    kill
endif
#palegreen:action;
@enduml

```

[Ref. QA-265]

- `detach`

```

@startuml
if (condition?) then
    #pink:error;
    detach
endif
#palegreen:action;
@enduml

```

6.5 Repeat loop

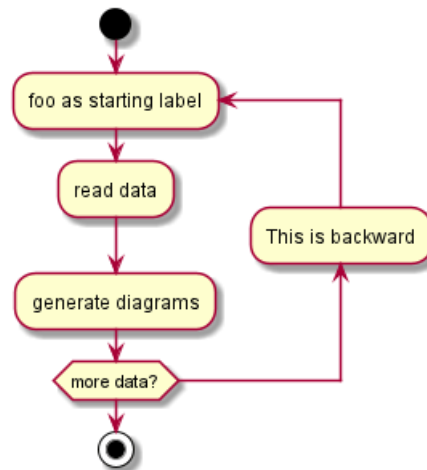

You can use `repeat` and `repeatwhile` keywords to have repeat loops.

```
@startuml
start
repeat
  :read data;
  :generate diagrams;
repeat while (more data?) is (yes)
->no;
stop
@enduml
```

It is also possible to use a full action as `repeat` target and insert an action in the return path using the `backward` keyword.

```
@startuml
start
repeat :foo as starting label;
  :read data;
  :generate diagrams;
backward:This is backward;
repeat while (more data?)
stop
@enduml
```

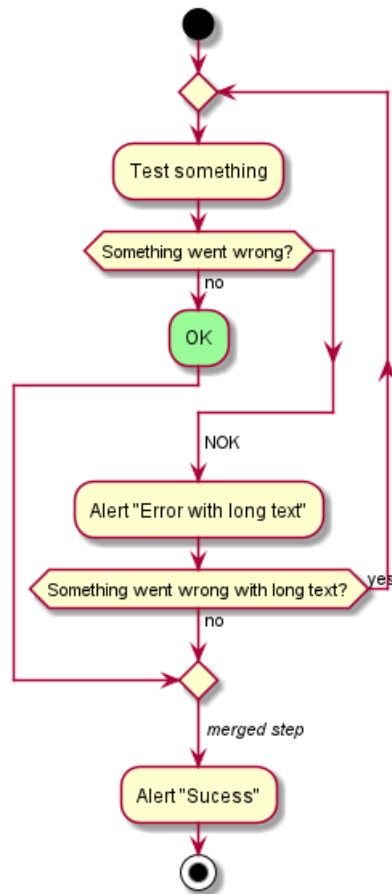

6.6 Break on a repeat loop [break]

You can break after an action on a loop.

```

@startuml
start
repeat
  :Test something;
  if (Something went wrong?) then (no)
    #palegreen:OK;
    break
  endif
  ->NOK;
  :Alert "Error with long text";
repeat while (Something went wrong with long text?) is (yes) not (no)
->//merged step//;
:Alert "Sucess";
stop
@enduml
  
```

[Ref. QA-6105]

6.7 While loop

You can use `while` and `end while` keywords to have repeat loops.

```

@startuml

start

while (data available?)
    :read data;
    :generate diagrams;
endwhile

stop

@enduml
  
```

It is possible to provide a label after the `endwhile` keyword, or using the `is` keyword.

```

@startuml
while (check filesize ?) is (not empty)
  :read file;
endwhile (empty)
:close file;
@enduml
  
```

6.8 Parallel processing

You can use `fork`, `fork again` and `end fork` keywords to denote parallel processing.

```

@startuml
start

if (multiprocessor?) then (yes)
  fork
    :Treatment 1;
  fork again
    :Treatment 2;
  end fork
else (monoproc)
  :Treatment 1;
  :Treatment 2;
endif

@enduml
  
```

6.9 Split processing

6.9.1 Split

You can use `split`, `split again` and `end split` keywords to denote split processing.

```

@startuml
start
split
  :A;
split again
  :B;
split again
  :C;
split again
  :a;
  :b;
end split
:D;
end
@enduml
  
```

6.9.2 Input split (multi-start)

You can use `hidden` arrows to make an input split (multi-start):

```

@startuml
split
  -[hidden]->
  :A;
split again
  -[hidden]->
  :B;
end split
end
  
```

```

    :B;
split again
-[hidden]->
    :C;
end split
:D;
@enduml

```

```

@startuml
split
-[hidden]->
    :A;
split again
-[hidden]->
    :a;
    :b;
split again
-[hidden]->
    (Z)
end split
:D;
@enduml

```

[Ref. QA-8662]

6.9.3 Output split (multi-end)

You can use **kill** or **detach** to make an output split (multi-end):

```

@startuml
start
split
    :A;
    kill
split again
    :B;
    detach
split again
    :C;
    kill

```

```
end split
@enduml
```

```
@startuml
start
split
:A;
kill
split again
:b;
:c;
detach
split again
(Z)
detach
split again
end
split again
stop
end split
@enduml
```

6.10 Notes

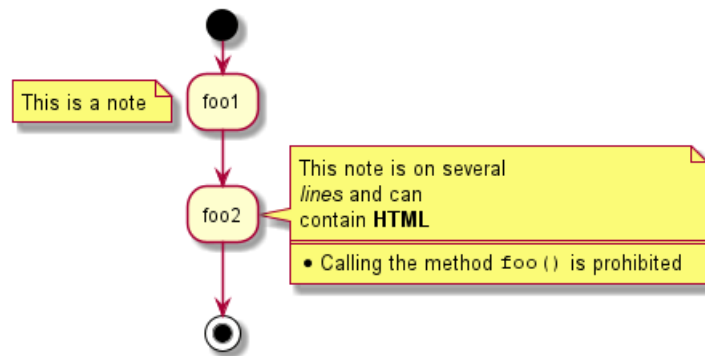

Text formatting can be done using creole wiki syntax.

A note can be floating, using `floating` keyword.

```
@startuml
start
:foo1;
floating note left: This is a note
:foo2;
note right
  This note is on several
  //lines// and can
  contain <b>HTML</b>
  ====
  * Calling the method ""foo()"" is prohibited
end note
stop
```

@enduml

You can add note on backward activity.

```

@startuml
start
repeat :Enter data;
:Submit;
backward :Warning;
note right: Note
repeat while (Valid?) is (No) not (Yes)
stop
@enduml
  
```

[Ref. QA-11788]

6.11 Colors

You can specify a color for some activities.

```

@startuml
start
:starting progress;
#HotPink:reading configuration files
These files should be edited at this point!;
#AAAAAA:ending of the process;
@enduml
  
```

6.12 Lines without arrows

You can use skinparam ArrowHeadColor none in order to connect activities using lines only, without arrows.

```

@startuml
skinparam ArrowHeadColor none
start
:Hello world;
:This is on defined on
several **lines**;
stop
@enduml
  
```

```

@startuml
skinparam ArrowHeadColor none
start
repeat :Enter data;
:Submit;
backward :Warning;
repeat while (Valid?) is (No) not (Yes)
stop
@enduml
  
```

6.13 Arrows

Using the `->` notation, you can add texts to arrow, and change their color.

It's also possible to have dotted, dashed, bold or hidden arrows.

```

@startuml
:foo1;
-> You can put text on arrows;
if (test) then
  -[#blue]->
  :foo2;
  -[#green,dashed]-> The text can
    also be on several lines
    and very long...;
  :foo3;
else
  -[#black,dotted]->
  :foo4;
endif
-[#gray,bold]->
:foo5;
@enduml
  
```

6.14 Connector

You can use parentheses to denote connector.

```

@startuml
start
:Some activity;
(A)
detach
(A)
:Other activity;
@enduml

```

6.15 Color on connector

You can add color on connector.

```

@startuml
start
:The connector below
wishes he was blue;
#blue:(B)
:This next connector
feels that she would
be better off green;
#green:(G)
stop
@enduml

```

[Ref. QA-10077]

6.16 Grouping or partition

You can group activity together by defining partition:

```

@startuml
start
partition Initialization {
    :read config file;
    :init internal variable;
}
partition Running {
    :wait for user interaction;
    :print information;
}

stop
@enduml

```

6.17 Swimlanes

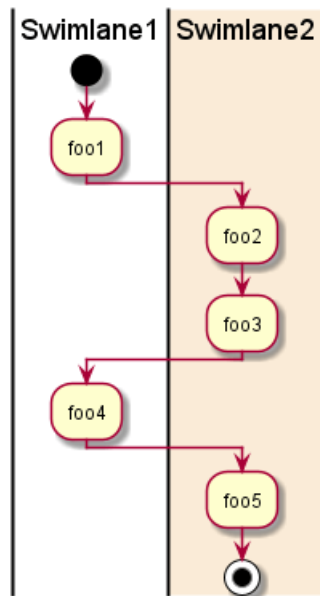

Using pipe |, you can define swimlanes.

It's also possible to change swimlanes color.

```

@startuml
|Swimlane1|
start
:foo1;
|#AntiqueWhite|Swimlane2|
:foo2;
:foo3;
|Swimlane1|
:foo4;
|Swimlane2|
:foo5;
stop
@enduml

```

You can add if conditional or repeat or while loop within swimlanes.

```

@startuml
|#pink|Actor_For_red|
start
if (color?) is (red) then
#pink:**action red**;
:foo1;
else (not red)
|#lightgray|Actor_For_no_red|
#lightgray:**action not red**;
:foo2;
endif
|Next_Actor|
#lightblue:foo3;
:foo4;
|Final_Actor|
#palegreen:foo5;
stop
@enduml
  
```

6.18 Detach or kill [detach, kill]

It's possible to remove an arrow using the `detach` or `kill` keyword:

- `detach`

```

@startuml
: start;
fork
: foo1;
: foo2;
fork again
: foo3;
detach
endifork
if (foo4) then
: foo5;
detach
endif
: foo6;
detach
: foo7;
stop
@enduml
  
```

- kill

```

@startuml
: start;
fork
  : foo1;
  : foo2;
fork again
  : foo3;
  kill
endifork
if (foo4) then
  : foo5;
  kill
endif
: foo6;
kill
: foo7;
stop
@enduml

```

6.19 SDL (Specification and Description Language)

By changing the final ; separator, you can set different rendering for the activity:

- |
- <
- >
- /
- \\
-]
- }

```

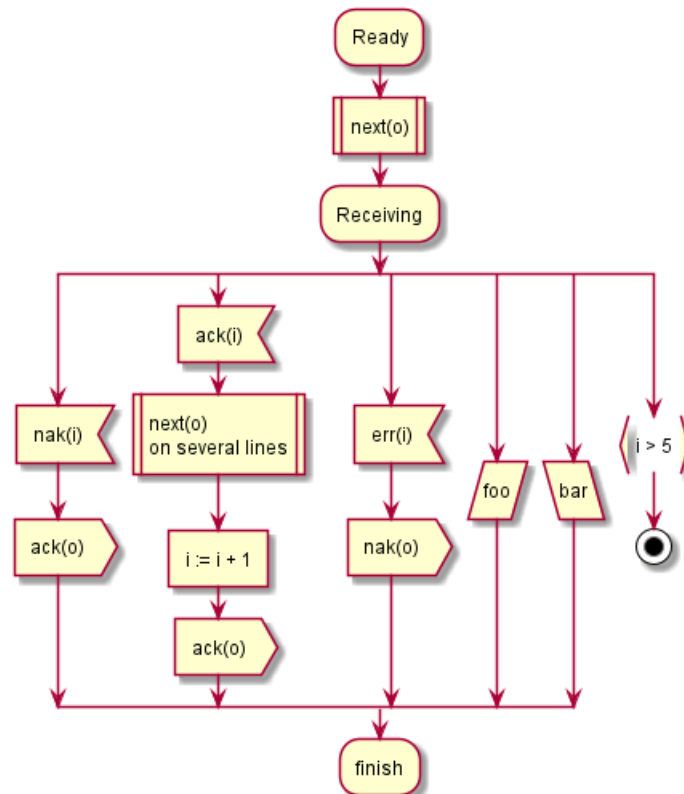

@startuml
:Ready;
:next(o)|
:Receiving;
split
:nak(i)<
:ack(o)>
split again
:ack(i)<
:next(o)
on several lines|
:i := i + 1]
:ack(o)>
split again
:err(i)<
:nak(o)>
split again
:foo/
  
```

```

split again
:bar\\
split again
:i > 5}
stop
end split
:finish;
@enduml

```

6.20 Complete example

```

@startuml
start
:ClickServlet.handleRequest();
:new page;
if (Page.onSecurityCheck) then (true)
:Page.onInit();
if (isForward?) then (no)
:Process controls;
if (continue processing?) then (no)
stop
endif
endif

if (isPost?) then (yes)
:Page.onPost();
else (no)
:Page.onGet();
endif
:Page.onRender();
endif
else (false)

```

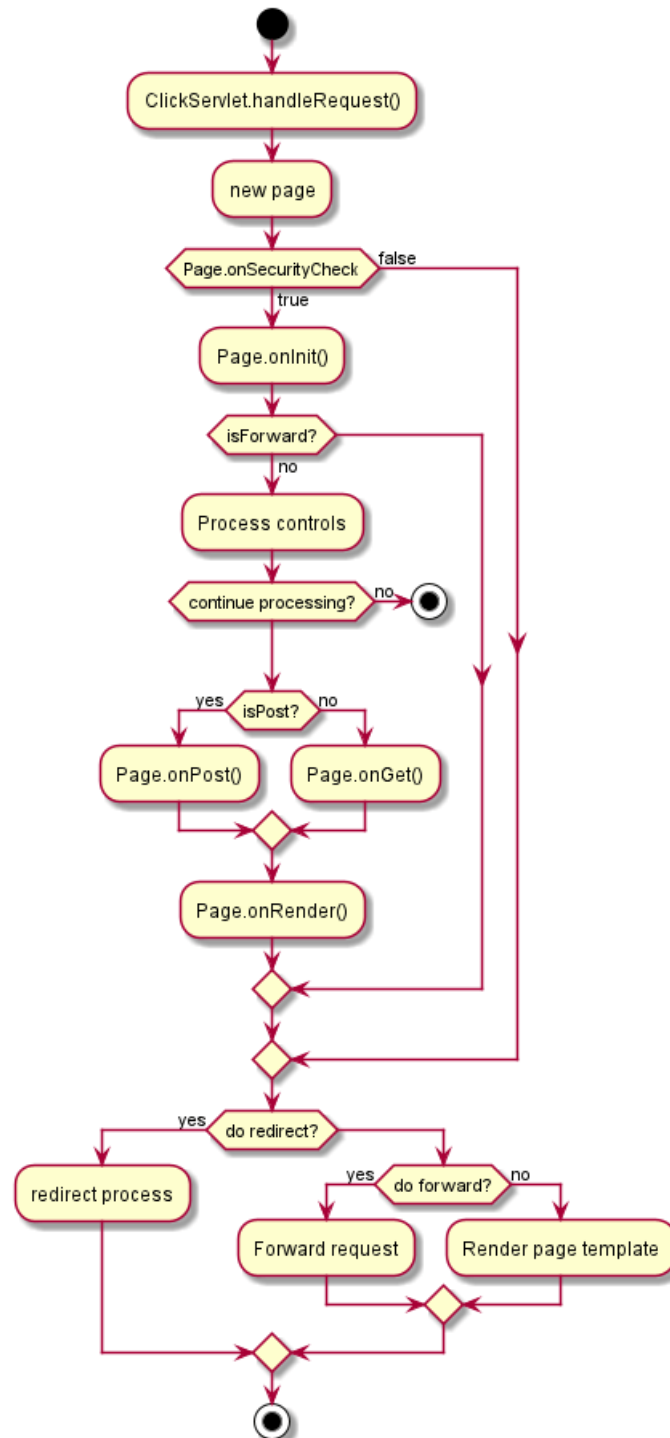

```
endif

if (do redirect?) then (yes)
  :redirect process;
else
  if (do forward?) then (yes)
    :Forward request;
  else (no)
    :Render page template;
  endif
endif

stop

@enduml
```

6.21 Condition Style

6.21.1 Inside style (by default)

```

@startuml
skinparam conditionStyle inside
start
repeat
    :act1;
    :act2;
repeatwhile (<b>end)
:act3;
  
```

```
@enduml
```

```
@startuml
start
repeat
  :act1;
  :act2;
repeatwhile (<b>end)
:act3;
@enduml
```

6.21.2 Diamond style

```
@startuml
skinparam conditionStyle diamond
start
repeat
  :act1;
  :act2;
repeatwhile (<b>end)
:act3;
@enduml
```

6.21.3 InsideDiamond (or *Foo1*) style

```

@startuml
skinparam conditionStyle InsideDiamond
start
repeat
    :act1;
    :act2;
repeatwhile (<b>end)
:act3;
@enduml
  
```

```

@startuml
skinparam conditionStyle foo1
start
repeat
    :act1;
    :act2;
repeatwhile (<b>end)
:act3;
@enduml
  
```

[Ref. QA-1290 and #400]

6.22 Condition End Style

6.22.1 Diamond style (by default)

- With one branch

```

@startuml
skinparam ConditionEndStyle diamond
:A;
if (decision) then (yes)
    :B1;
else (no)
endif
:C;
@enduml
  
```

- With two branches (B1, B2)

```

@startuml
skinparam ConditionEndStyle diamond
:A;
if (decision) then (yes)
    :B1;
else (no)
    :B2;
endif
:C;
@enduml
  
```

```
@enduml
```

6.22.2 Horizontal line (hline) style

- With one branch

```

@startuml
skinparam ConditionEndStyle hline
:A;
if (decision) then (yes)
    :B1;
else (no)
endif
:C;
@enduml

```

- With two branches (B1, B2)

```

@startuml
skinparam ConditionEndStyle hline
:A;
if (decision) then (yes)
    :B1;
else (no)
    :B2;
endif
:C;
@enduml

```

[Ref. QA-4015]

7 Component Diagram

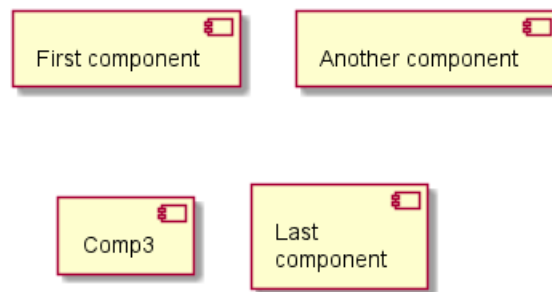

Let's have few examples.

7.1 Components

Components must be bracketed.

You can also use the `component` keyword to define a component. And you can define an alias, using the `as` keyword. This alias will be used later, when defining relations.

```
@startuml
[First component]
[Another component] as Comp2
component Comp3
component [Last\ncomponent] as Comp4
@enduml
```

7.2 Interfaces

Interface can be defined using the `()` symbol (because this looks like a circle).

You can also use the `interface` keyword to define an interface. And you can define an alias, using the `as` keyword. This alias will be used latter, when defining relations.

We will see latter that interface definition is optional.

```
@startuml
() "First Interface"
() "Another interface" as Interf2
interface Interf3
interface "Last\ninterface" as Interf4

[component]
footer //Adding "component" to force diagram to be a **component diagram**//
@enduml
```

Adding "component" to force diagram to be a component diagram

7.3 Basic example

Links between elements are made using combinations of dotted line (..), straight line (--), and arrows (-->) symbols.

```
@startuml
```

```
DataAccess - [First Component]
[First Component] ..> HTTP : use
```

```
@enduml
```

7.4 Using notes

You can use the `note left of`, `note right of`, `note top of`, `note bottom of` keywords to define notes related to a single object.

A note can be also define alone with the `note` keywords, then linked to other objects using the `..` symbol.

```
@startuml
```

```
interface "Data Access" as DA
```

```
DA - [First Component]
[First Component] ..> HTTP : use
```

```
note left of HTTP : Web Service only
```

```
note right of [First Component]
  A note can also
  be on several lines
end note
```

```
@enduml
```

7.5 Grouping Components

You can use several keywords to group components and interfaces together:

- `package`

- node
- folder
- frame
- cloud
- database

```
@startuml

package "Some Group" {
    HTTP - [First Component]
    [Another Component]
}

node "Other Groups" {
    FTP - [Second Component]
    [First Component] --> FTP
}

cloud {
    [Example 1]
}

database "MySQL" {
    folder "This is my folder" {
        [Folder 3]
    }
    frame "Foo" {
        [Frame 4]
    }
}

[Another Component] --> [Example 1]
[Example 1] --> [Folder 3]
[Folder 3] --> [Frame 4]

@enduml
```

7.6 Changing arrows direction

By default, links between classes have two dashes -- and are vertically oriented. It is possible to use horizontal link by putting a single dash (or dot) like this:

```
@startuml
[Component] --> Interface1
[Component] -> Interface2
@enduml
```

You can also change directions by reversing the link:

```
@startuml
Interface1 <-- [Component]
Interface2 <- [Component]
@enduml
```

It is also possible to change arrow direction by adding **left**, **right**, **up** or **down** keywords inside the arrow:

```

@startuml
[Component] -left-> left
[Component] -right-> right
[Component] -up-> up
[Component] -down-> down
@enduml
  
```

You can shorten the arrow by using only the first character of the direction (for example, **-d-** instead of **-down-**) or the two first characters (**-do-**).

Please note that you should not abuse this functionality : *Graphviz* gives usually good results without tweaking.

And with the **left to right direction** parameter:

```

@startuml
left to right direction
[Component] -left-> left
[Component] -right-> right
[Component] -up-> up
[Component] -down-> down
@enduml
  
```

7.7 Use UML2 notation

By default (from v1.2020.13-14), UML2 notation is used.

```
@startuml
```

```
interface "Data Access" as DA
```

```
DA - [First Component]
```

```
[First Component] ..> HTTP : use
```

```
@enduml
```

7.8 Use UML1 notation

The `skinparam componentStyle uml1` command is used to switch to UML1 notation.

```
@startuml
```

```
skinparam componentStyle uml1
```

```
interface "Data Access" as DA
```

```
DA - [First Component]
```

```
[First Component] ..> HTTP : use
```

```
@enduml
```

7.9 Use rectangle notation (remove UML notation)

The `skinparam componentStyle rectangle` command is used to switch to rectangle notation (*without any UML notation*).

```
@startuml
```

```
skinparam componentStyle rectangle
```

```
interface "Data Access" as DA
```

```
DA - [First Component]
```

```
[First Component] ..> HTTP : use
```

```
@enduml
```

7.10 Long description

It is possible to put description on several lines using square brackets.

```
@startuml
component comp1 [
This component
has a long comment
on several lines
]
@enduml
```

7.11 Individual colors

You can specify a color after component definition.

```
@startuml
component [Web Server] #Yellow
@enduml
```

7.12 Using Sprite in Stereotype

You can use sprites within stereotype components.

```
@startuml
sprite $businessProcess [16x16/16] {
FFFFFFFFFFFFFFFF
FFFFFFFFFFFFFFFF
FFFFFFFFFFFFFFFF
FFFFFFFFFFFFFFFF
FFFFFFFFFOFFFFF
FFFFFFFFF0FFFFF
FF000000000000FF
FF000000000000FF
FF000000000000FF
FFFFFFFFF0FFFFF
FFFFFFFFFOFFFFF
FFFFFFFFFFFFFFFF
}
```

```

FFFFFFFFFFFFFFFFF
FFFFFFFFFFFFFFFFF
FFFFFFFFFFFFFFFFF
FFFFFFFFFFFFFFFFF
}

```

```

rectangle " End to End\nbusiness process" <<$businessProcess>> {
  rectangle "inner process 1" <<$businessProcess>> as src
  rectangle "inner process 2" <<$businessProcess>> as tgt
  src -> tgt
}
@enduml

```

7.13 Skinparam

You can use the skinparam command to change colors and fonts for the drawing.

You can use this command :

- In the diagram definition, like any other commands;
- In an included file;
- In a configuration file, provided in the command line or the Ant task.

You can define specific color and fonts for stereotyped components and interfaces.

```
@startuml
```

```

skinparam interface {
  backgroundColor RosyBrown
  borderColor orange
}

```

```

skinparam component {
  FontSize 13
  BackgroundColor<<Apache>> Red
  BorderColor<<Apache>> #FF6655
  FontName Courier
  BorderColor black
  BackgroundColor gold
  ArrowFontName Impact
  ArrowColor #FF6655
  ArrowFontColor #777777
}

```

```
() "Data Access" as DA
```

```

DA - [First Component]
[First Component] ..> () HTTP : use
HTTP - [Web Server] << Apache >>

```

@enduml

@startuml

[AA] <<static lib>>

[BB] <<shared lib>>

[CC] <<static lib>>

node node1

node node2 <<shared node>>

database Production

```
skinparam component {
    backgroundColor<<static lib>> DarkKhaki
    backgroundColor<<shared lib>> Green
}
```

```
skinparam node {
    borderColor Green
    backgroundColor Yellow
    backgroundColor<<shared node>> Magenta
}
skinparam databaseBackgroundColor Aqua
```

@enduml

7.14 Specific SkinParameter

7.14.1 componentStyle

- By default (or with `skinparam componentStyle uml2`), you have an icon for component

```
@startuml
skinparam BackgroundColor transparent
skinparam componentStyle uml2
component A {
    component "A.1" {
    }
    component A.44 {
        [A4.1]
    }
}
```

```

}
  component "A.2"
    [A.3]
    component A.5 [
A.5]
    component A.6 [
]
}
[a]->[b]
@enduml

```

- If you want to suppress it, and to have only the rectangle, you can use `skinparam componentStyle rectangle`

```

@startuml
skinparam BackgroundColor transparent
skinparam componentStyle rectangle
component A {
  component "A.1" {
}
  component A.44 {
    [A.4.1]
}
  component "A.2"
    [A.3]
    component A.5 [
A.5]
    component A.6 [
]
}
[a]->[b]
@enduml

```

[Ref. 10798]

7.15 Hide or Remove unlinked component

By default, all components are displayed:

```
@startuml
component C1
component C2
component C3
C1 -- C2
@enduml
```

But you can:

- hide @unlinked components:

```
@startuml
component C1
component C2
component C3
C1 -- C2

hide @unlinked
@enduml
```

- or remove @unlinked components:

```
@startuml
component C1
component C2
component C3
C1 -- C2

remove @unlinked
@enduml
```

[Ref. QA-11052]

8 Deployment Diagram

8.1 Declaring element

```
@startuml
actor actor
actor/ "actor/"
agent agent
artifact artifact
boundary boundary
card card
circle circle
cloud cloud
collections collections
component component
control control
database database
entity entity
file file
folder folder
frame frame
hexagon hexagon
interface interface
label label
node node
package package
queue queue
rectangle rectangle
stack stack
storage storage
usecase usecase
usecase/ "usecase/"
@enduml
```

You can optionally put text using bracket [] for a long description.

```
@startuml
folder folder [
This is a <b>folder
----
You can use separator
====
of different kind
....
and style
]

node node [
This is a <b>node
----
You can use separator
====
of different kind
....
and style
]

database database [
This is a <b>database
----
You can use separator
====
of different kind
....
and style
```

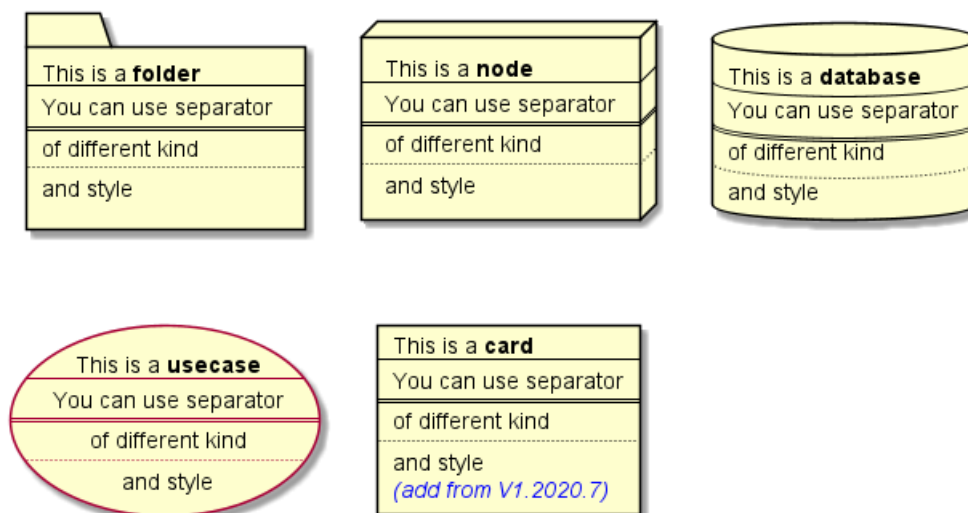

```

]

usecase usecase [
This is a <b>usecase
----
You can use separator
====
of different kind
....
and style
]

card card [
This is a <b>card
----
You can use separator
====
of different kind
....
and style
<i><color:blue>(add from V1.2020.7)</color></i>
]
@enduml

```

8.2 Declaring element (using short form)

We can declare element using some short forms.

Long form Keyword	Short form Keyword	Long form example	Short form example	Ref.
actor	: <i>a</i> :	actor actor1	:actor2:	Actors
component	[<i>c</i>]	component component1	[component2]	Components
interface	() <i>i</i>	interface interface1	() "interface2"	Interfaces
usecase	(<i>u</i>)	usecase usecase1	(usecase2)	Usecases

8.2.1 Actor

```

@startuml

actor actor1
:actor2:

@enduml

```

NB: *There is an old syntax for actor with guillemet which is now deprecated and will be removed some days. Please do not use in your diagram.*

8.2.2 Component

```
@startuml
component component1
[component2]
@enduml
```

8.2.3 Interface

```
@startuml
interface interface1
() "interface2"
label "//interface example//"
@enduml
```

interface example

8.2.4 Usecase

```
@startuml
usecase usecase1
(usecase2)
@enduml
```

8.3 Linking or arrow

You can create simple links between elements with or without labels:

```
@startuml
node node1
node node2
node node3
```

```

node node4
node node5
node1 -- node2 : label1
node1 .. node3 : label2
node1 ~~ node4 : label3
node1 == node5

@enduml

```

It is possible to use several types of links:

```

@startuml

artifact artifact1
artifact artifact2
artifact artifact3
artifact artifact4
artifact artifact5
artifact artifact6
artifact artifact7
artifact artifact8
artifact artifact9
artifact artifact10
artifact1 --> artifact2
artifact1 --* artifact3
artifact1 --o artifact4
artifact1 --+ artifact5
artifact1 --# artifact6
artifact1 -->> artifact7
artifact1 --0 artifact8
artifact1 --^ artifact9
artifact1 --(0 artifact10

@enduml

```

You can also have the following types:

```

@startuml

cloud cloud1
cloud cloud2
cloud cloud3

```

```

cloud cloud4
cloud cloud5
cloud1 -0- cloud2
cloud1 -0)- cloud3
cloud1 -(0- cloud4
cloud1 -(0)- cloud5

```

```
@enduml
```

or another example:

```

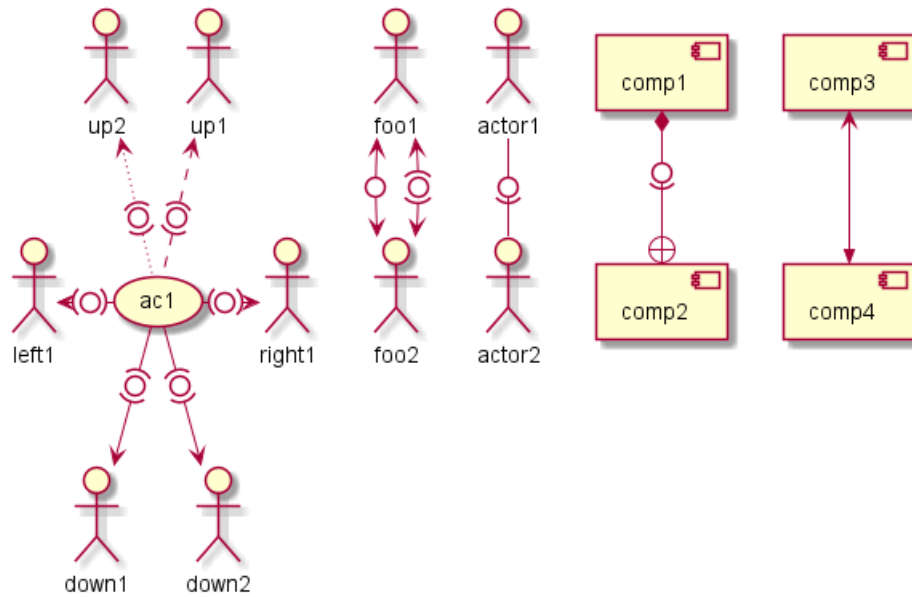

@startuml
actor foo1
actor foo2
foo1 <-0-> foo2
foo1 <-(0)-> foo2

(ac1) -le(0)-> left1
ac1 -ri(0)-> right1
ac1 .up(0).> up1
ac1 ~up(0)~> up2
ac1 -do(0)-> down1
ac1 -do(0)-> down2

actor1 -0)- actor2

component comp1
component comp2
comp1 *-0)-+ comp2
[comp3] <-->> [comp4]
@enduml

```

[Ref. QA-1736]

See all type on **Appendix**.

8.4 Bracketed arrow style

Similar as Bracketed **class** relations (linking or arrow) style

8.4.1 Line style

It's also possible to have explicitly bold, dashed, dotted, hidden or plain arrows:

- without label

```
@startuml
node foo
title Bracketed line style without label
foo --> bar
foo -[bold]-> bar1
foo -[dashed]-> bar2
foo -[dotted]-> bar3
foo -[hidden]-> bar4
foo -[plain]-> bar5
@enduml
```

- with label

```
@startuml
title Bracketed line style with label
node foo
```

```

foo --> bar      :
foo -[bold]-> bar1 : [bold]
foo -[dashed]-> bar2 : [dashed]
foo -[dotted]-> bar3 : [dotted]
foo -[hidden]-> bar4 : [hidden]
foo -[plain]-> bar5 : [plain]
@enduml

```

[Adapted from QA-4181]

8.4.2 Line color

```

@startuml
title Bracketed line color
node foo
foo --> bar
foo -[#red]-> bar1 : [#red]
foo -[#green]-> bar2 : [#green]
foo -[#blue]-> bar3 : [#blue]
foo -[#blue;#yellow;#green]-> bar4
@enduml

```

8.4.3 Line thickness

```

@startuml
title Bracketed line thickness
node foo
foo --> bar      :
foo -[thickness=1]-> bar1 : [1]
foo -[thickness=2]-> bar2 : [2]
foo -[thickness=4]-> bar3 : [4]
foo -[thickness=8]-> bar4 : [8]
foo -[thickness=16]-> bar5 : [16]
@enduml

```

[Adapted from QA-4949]

8.4.4 Mix

```

@startuml
title Bracketed line style mix
node foo
foo --> bar : 
foo -[#red,thickness=1]-> bar1 : [#red,1]
foo -[#red,dashed,thickness=2]-> bar2 : [#red,dashed,2]
foo -[#green,dashed,thickness=4]-> bar3 : [#green,dashed,4]
foo -[#blue,dotted,thickness=8]-> bar4 : [blue,dotted,8]
foo -[#blue,plain,thickness=16]-> bar5 : [blue,plain,16]
foo -[#blue;#green,dashed,thickness=4]-> bar6 : [blue;green,dashed,4]
@enduml
  
```

8.5 Change arrow color and style (inline style)

You can change the color or style of individual arrows using the inline following notation:

- #color;line.[bold|dashed|dotted];text:color

```

@startuml
node foo
foo --> bar : normal
foo --> bar1 #line:red;line.bold;text:red : red bold
foo --> bar2 #green;line.dashed;text:green : green dashed
foo --> bar3 #blue;line.dotted;text:blue : blue dotted
@enduml
  
```

[Ref. QA-3770 and QA-3816] [See similar feature on class diagram]

8.6 Change element color and style (inline style)

You can change the color or style of individual element using the following notation:

- `#[color|back:color];line:color;line.[bold|dashed|dotted];text:color`

```

@startuml
agent a
cloud c #pink;line:red;line.bold;text:red
file f #palegreen;line:green;line.dashed;text:green
node n #aliceblue;line:blue;line.dotted;text:blue
@enduml

```

```

@startuml
agent a
cloud c #pink;line:red;line.bold;text:red [
c
cloud description
]
file f #palegreen;line:green;line.dashed;text:green {
[c1]
[c2]
}
frame frame {
node n #aliceblue;line:blue;line.dotted;text:blue
}
@enduml

```

[Ref. QA-6852]

8.7 Nestable elements

Here are the nestable elements:

```
@startuml
artifact artifact {
}
card card {
}
cloud cloud {
}
component component {
}
database database {
}
file file {
}
folder folder {
}
frame frame {
}
hexagon hexagon {
}
node node {
}
package package {
}
queue queue {
}
rectangle rectangle {
}
stack stack {
}
storage storage {
}
@enduml
```

8.8 Packages and nested elements

8.8.1 Example with one level

```
@startuml
artifact      artifactVeryL00000000000000000000g      as "artifact" {
file f1
}
card          cardVeryL00000000000000000000g        as "card" {
file f2
}
cloud         cloudVeryL00000000000000000000g       as "cloud" {
file f3
}
component     componentVeryL00000000000000000000g   as "component" {
file f4
}
database      databaseVeryL00000000000000000000g    as "database" {
file f5
}
```

```

}
file      fileVeryL0000000000000000000g      as "file" {
file f6
}
folder    folderVeryL0000000000000000000g      as "folder" {
file f7
}
frame     frameVeryL0000000000000000000g      as "frame" {
file f8
}
hexagon   hexagonVeryL0000000000000000000g    as "hexagon" {
file f9
}
node      nodeVeryL0000000000000000000g      as "node" {
file f10
}
package   packageVeryL0000000000000000000g    as "package" {
file f11
}
queue     queueVeryL0000000000000000000g      as "queue" {
file f12
}
rectangle rectangleVeryL0000000000000000000g  as "rectangle" {
file f13
}
stack     stackVeryL0000000000000000000g      as "stack" {
file f14
}
storage   storageVeryL0000000000000000000g    as "storage" {
file f15
}
@enduml

```

8.8.2 Other example

```

@startuml
artifact Foo1 {
  folder Foo2
}

folder Foo3 {
  artifact Foo4
}

frame Foo5 {
  database Foo6
}

cloud vpc {
  node ec2 {
    stack stack
  }
}

```

@enduml

```

@startuml
node Foo1 {
  cloud Foo2
}

cloud Foo3 {
  frame Foo4
}

database Foo5 {
  storage Foo6
}

storage Foo7 {
  storage Foo8
}
@enduml

```

8.8.3 Full nesting

Here is all the nested elements:

- by alphabetical order:

```

@startuml
artifact artifact {
  card card {
    cloud cloud {
      component component {
        database database {
          file file {
            folder folder {
              frame frame {
                hexagon hexagon {
                  node node {
                    package package {
                      queue queue {
                        rectangle rectangle {
                          stack stack {
                            storage storage {

```

```
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
}  
@enduml
```

- or reverse alphabetical order

```
@startuml
storage storage {
stack stack {
rectangle rectangle {
queue queue {
```

```
package package {  
  node node {  
    hexagon hexagon {  
      frame frame {  
        folder folder {  
          file file {  
            database database {  
              component component {  
                cloud cloud {  
                  card card {  
                    artifact artifact {  
                      }  
                    }  
                  }  
                }  
              }  
            }  
          }  
        }  
      }  
    }  
  }  
}  
@enduml
```

8.9 Alias

8.9.1 Simple alias with as

```
@startuml
node Node1 as n1
node "Node 2" as n2
```

```

file f1 as "File 1"
cloud c1 as "this
is
a
cloud"
cloud c2 [this
is
another
cloud]

n1 -> n2
n1 --> f1
f1 -> c1
c1 -> c2
@enduml

```

8.9.2 Examples of long alias

```

@startuml
actor      "actor"      as actorVeryL00000000000000000000g
agent      "agent"      as agentVeryL00000000000000000000g
artifact   "artifact"   as artifactVeryL00000000000000000000g
boundary   "boundary"   as boundaryVeryL00000000000000000000g
card        "card"       as cardVeryL00000000000000000000g
cloud      "cloud"      as cloudVeryL00000000000000000000g
collections "collections" as collectionsVeryL00000000000000000000g
component  "component"  as componentVeryL00000000000000000000g
control     "control"    as controlVeryL00000000000000000000g
database    "database"   as databaseVeryL00000000000000000000g
entity      "entity"     as entityVeryL00000000000000000000g

9 State Diagram

State diagrams are used to give an abstract description of the behavior of a system. This behavior is represented as a series of events that can occur in one or more possible states.

9.1 Simple State

You can use `[*]` for the starting point and ending point of the state diagram.

Use `-->` for arrows.

```
@startuml
[*] --> State1
State1 --> [*]
State1 : this is a string
State1 : this is another string

State1 -> State2
State2 --> [*]

@enduml
```

9.2 Change state rendering

You can use `hide empty description` to render state as simple box.

```
@startuml
hide empty description
[*] --> State1
State1 --> [*]
State1 : this is a string
State1 : this is another string

State1 -> State2
State2 --> [*]

@enduml
```

9.3 Composite state

A state can also be composite. You have to define it using the **state** keywords and brackets.

9.3.1 Internal sub-state

```

@startuml
scale 350 width
[*] --> NotShooting

state NotShooting {
    [*] --> Idle
    Idle --> Configuring : EvConfig
    Configuring --> Idle : EvConfig
}

state Configuring {
    [*] --> NewValueSelection
    NewValueSelection --> NewValuePreview : EvNewValue
    NewValuePreview --> NewValueSelection : EvNewValueRejected
    NewValuePreview --> NewValueSelection : EvNewValueSaved

    state NewValuePreview {
        State1 -> State2
    }
}

@enduml
  
```

9.3.2 Sub-state to sub-state

```

@startuml
state A {
    state X {
    }
    state Y {
    }
}

state B {
    state Z {
    }
}

X --> Z
Z --> Y
@enduml
  
```

[Ref. QA-3300]

9.4 Long name

You can also use the `state` keyword to use long description for states.

```

@startuml
scale 600 width

[*] -> State1
State1 --> State2 : Succeeded
State1 --> [*] : Aborted
State2 --> State3 : Succeeded
State2 --> [*] : Aborted
state State3 {
    state "Accumulate Enough Data\nLong State Name" as long1
    long1 : Just a test
    [*] --> long1
    long1 --> long1 : New Data
    long1 --> ProcessData : Enough Data
}
State3 --> State3 : Failed
State3 --> [*] : Succeeded / Save Result
State3 --> [*] : Aborted

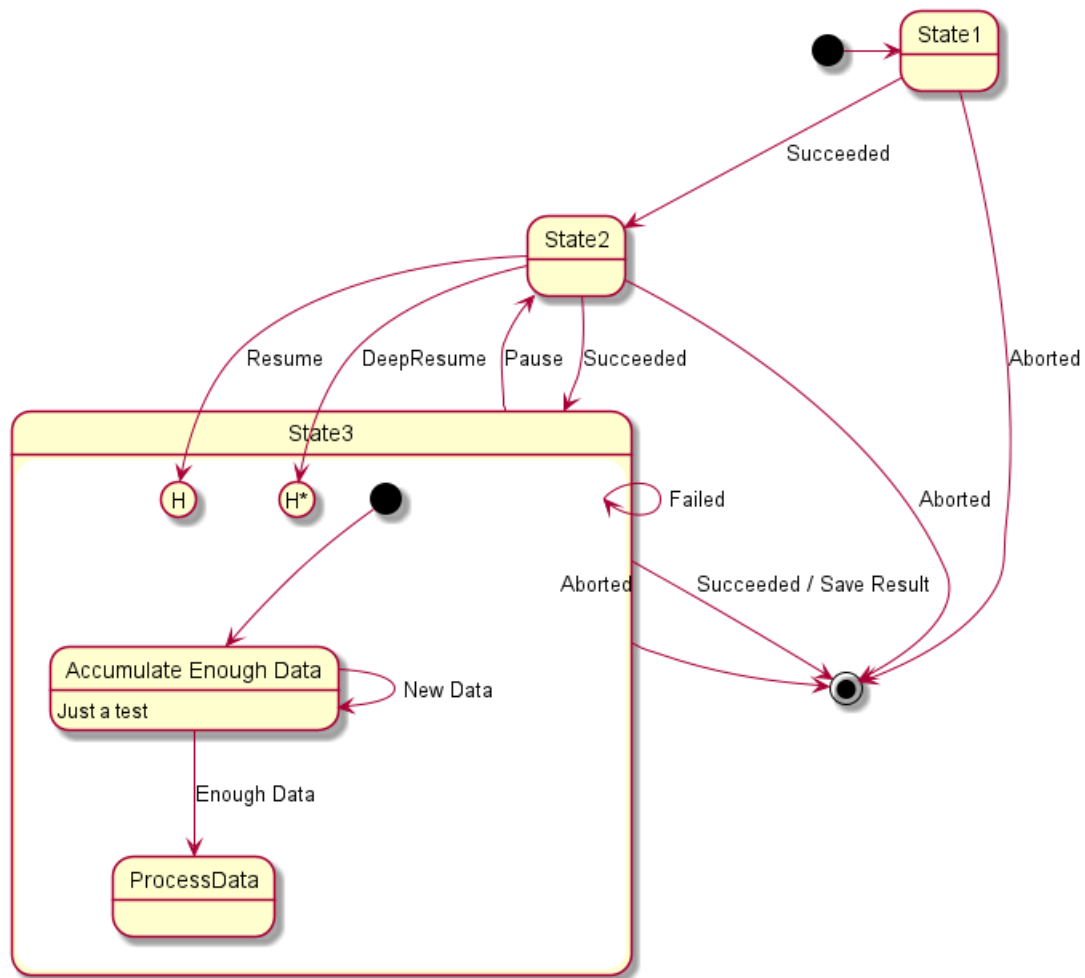

@enduml
  
```

9.5 History $[[H], [H^*]]$

You can use $[H]$ for the history and $[H^*]$ for the deep history of a substate.

```
@startuml
[*] -> State1
State1 --> State2 : Succeeded
State1 --> [*] : Aborted
State2 --> State3 : Succeeded
State2 --> [*] : Aborted
state State3 {
    state "Accumulate Enough Data" as long1
    long1 : Just a test
    [*] --> long1
    long1 --> long1 : New Data
    long1 --> ProcessData : Enough Data
    State2 --> [H] : Resume
}
State3 --> State2 : Pause
State2 --> State3[H*] : DeepResume
State3 --> State3 : Failed
State3 --> [*] : Succeeded / Save Result
State3 --> [*] : Aborted
@enduml
```

9.6 Fork [fork, join]

You can also fork and join using the `<<fork>>` and `<<join>>` stereotypes.

```
@startuml
```

```
state fork_state <<fork>>
[*] --> fork_state
fork_state --> State2
fork_state --> State3
```

```
state join_state <<join>>
State2 --> join_state
State3 --> join_state
join_state --> State4
State4 --> [*]
```

```
@enduml
```

9.7 Concurrent state $[-, ||]$

You can define concurrent state into a composite state using either `--` or `||` symbol as separator.

9.7.1 Horizontal separator `--`

```
@startuml
[*] --> Active

state Active {
    [*] -> NumLockOff
    NumLockOff --> NumLockOn : EvNumLockPressed
    NumLockOn --> NumLockOff : EvNumLockPressed
    --
    [*] -> CapsLockOff
    CapsLockOff --> CapsLockOn : EvCapsLockPressed
    CapsLockOn --> CapsLockOff : EvCapsLockPressed
    --
    [*] -> ScrollLockOff
    ScrollLockOff --> ScrollLockOn : EvCapsLockPressed
    ScrollLockOn --> ScrollLockOff : EvCapsLockPressed
}

@enduml
```

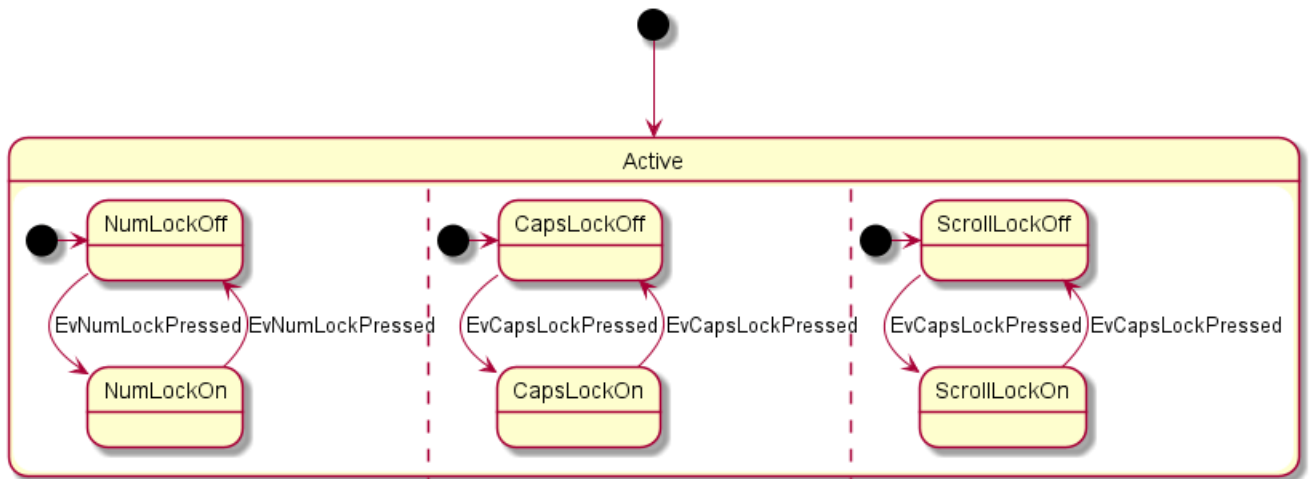

9.7.2 Vertical separator ||

```

@startuml
[*] --> Active

state Active {
    [*] -> NumLockOff
    NumLockOff --> NumLockOn : EvNumLockPressed
    NumLockOn --> NumLockOff : EvNumLockPressed
    ||
    [*] -> CapsLockOff
    CapsLockOff --> CapsLockOn : EvCapsLockPressed
    CapsLockOn --> CapsLockOff : EvCapsLockPressed
    ||
    [*] -> ScrollLockOff
    ScrollLockOff --> ScrollLockOn : EvCapsLockPressed
    ScrollLockOn --> ScrollLockOff : EvCapsLockPressed
}

@enduml
  
```

9.8 Conditional [choice]

The stereotype <<choice>> can be used to use conditional state.

```
@startuml
state "Req(Id)" as ReqId <<sdlreceive>>
state "Minor(Id)" as MinorId
state "Major(Id)" as MajorId

state c <<choice>>

Idle --> ReqId
ReqId --> c
c --> MinorId : [Id <= 10]
c --> MajorId : [Id > 10]
@enduml
```

9.9 Stereotypes full example [choice, fork, join, end]

```
@startuml
state choice1 <<choice>>
state fork1 <<fork>>
```

```

state join2    <<join>>
state end3     <<end>>

[*]    --> choice1 : from start\nto choice
choice1 --> fork1   : from choice\nto fork
choice1 --> join2   : from choice\nto join
choice1 --> end3    : from choice\nto end

fork1   ---> State1 : from fork\nto state
fork1   ---> State2 : from fork\nto state

State2 --> join2    : from state\nto join
State1 --> [*]      : from state\nto end

join2   --> [*]     : from join\nto end
@enduml

```

[Ref. QA-404 and QA-1159]

9.10 Point [entryPoint, exitPoint]

You can add **point** with `<<entryPoint>>` and `<<exitPoint>>` stereotypes:

```

@startuml
state Somp {

```

```

state entry1 <<entryPoint>>
state entry2 <<entryPoint>>
state sin
entry1 --> sin
entry2 -> sin
sin -> sin2
sin2 --> exitA <<exitPoint>>
}

[*] --> entry1
exitA --> Foo
Foo1 -> entry2
@enduml

```

9.11 Pin [inputPin, outputPin]

You can added **pin** with <<inputPin>> and <<outputPin>> stereotypes:

```

@startuml
state Somp {
    state entry1 <<inputPin>>
    state entry2 <<inputPin>>
    state sin
    entry1 --> sin
    entry2 -> sin
    sin -> sin2
    sin2 --> exitA <<outputPin>>
}

[*] --> entry1
exitA --> Foo
Foo1 -> entry2
@enduml

```

[Ref. QA-4309]

9.12 Expansion [expansionInput, expansionOutput]

You can added **expansion** with `<<expansionInput>>` and `<<expansionOutput>>` stereotypes:

```

@startuml
state Somp {
    state entry1 <<expansionInput>>
    state entry2 <<expansionInput>>
    state sin
    state sin2
    entry1 --> sin
    entry2 -> sin
    sin -> sin2
    sin2 --> exitA <<expansionOutput>>
}

[*] --> entry1
exitA --> Foo
Foo1 -> entry2
@enduml
  
```

[Ref. QA-4309]

9.13 Arrow direction

You can use `->` for horizontal arrows. It is possible to force arrow's direction using the following syntax:

- `-down->` or `-->`
- `-right->` or `->` (default arrow)
- `-left->`
- `-up->`

@startuml

```

[*] -up-> First
First -right-> Second
Second --> Third
Third -left-> Last
  
```

@enduml

You can shorten the arrow definition by using only the first character of the direction (for example, `-d-` instead of `-down-`) or the two first characters (`-do-`).

Please note that you should not abuse this functionality : *Graphviz* gives usually good results without tweaking.

9.14 Change line color and style

You can change line color and/or line style.

```
@startuml
State S1
State S2
S1 -[#DD00AA]-> S2
S1 -left[#yellow]-> S3
S1 -up[#red,dashed]-> S4
S1 -right[#red,dashed]-> S5

X1 -[dashed]-> X2
Z1 -[dotted]-> Z2
Y1 -[#blue,bold]-> Y2
@enduml
```

[Ref. Incubation: Change line color in state diagrams]

9.15 Note

You can also define notes using `note left of`, `note right of`, `note top of`, `note bottom of` keywords.

You can also define notes on several lines.

```
@startuml

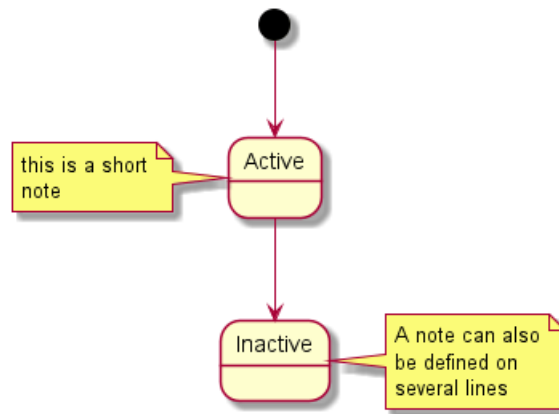

[*] --> Active
Active --> Inactive

note left of Active : this is a short\nnote

note right of Inactive
  A note can also
  be defined on
  several lines
end note

@enduml
```

You can also have floating notes.

```

@startuml

state foo
note "This is a floating note" as N1

@enduml
  
```

9.16 Note on link

You can put notes on state-transition or link, with `note on link` keyword.

```

@startuml
[*] -> State1
State1 --> State2
note on link
    this is a state-transition note
end note
@enduml
  
```

9.17 More in notes

You can put notes on composite states.

```

@startuml

[*] --> NotShooting

state "Not Shooting State" as NotShooting {
  Note
}
  
```

```

state "Idle mode" as Idle
state "Configuring mode" as Configuring
[*] --> Idle
Idle --> Configuring : EvConfig
Configuring --> Idle : EvConfig
}

note right of NotShooting : This is a note on a composite state

@enduml

```

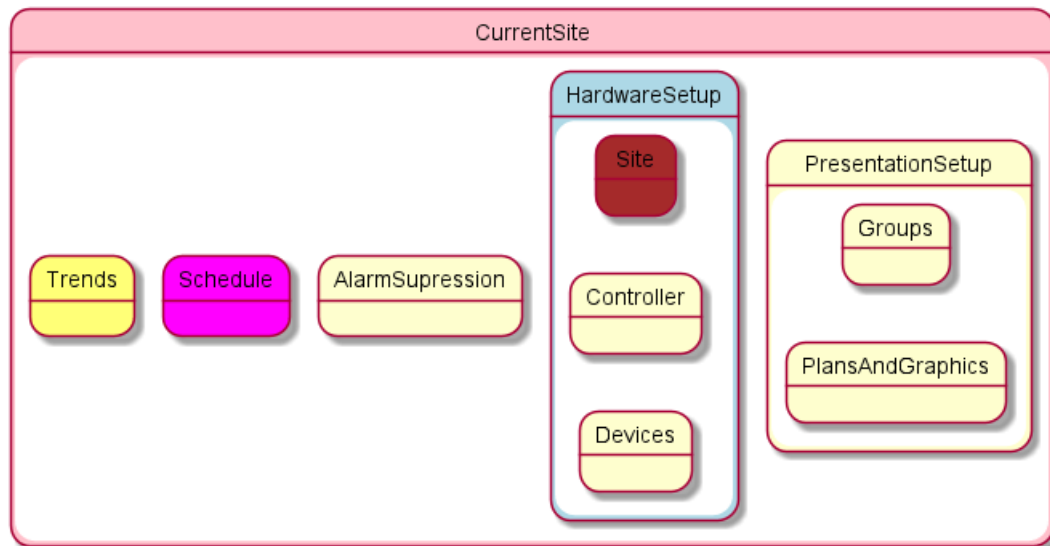

9.18 Inline color

```

@startuml
state CurrentSite #pink {
    state HardwareSetup #lightblue {
        state Site #brown
        Site -[hidden]-> Controller
        Controller -[hidden]-> Devices
    }
    state PresentationSetup{
        Groups -[hidden]-> PlansAndGraphics
    }
    state Trends #FFFF77
    state Schedule #magenta
    state AlarmSupression
}
@enduml

```

[Ref. QA-1812]

9.19 Skinparam

You can use the skinparam command to change colors and fonts for the drawing.

You can use this command :

- In the diagram definition, like any other commands,
- In an included file,
- In a configuration file, provided in the command line or the ANT task.

You can define specific color and fonts for stereotyped states.

```

@startuml
skinparam backgroundColor LightYellow
skinparam state {
  StartColor MediumBlue
  EndColor Red
  BackgroundColor Peru
  BackgroundColor<<Warning>> Olive
  BorderColor Gray
  FontName Impact
}

[*] --> NotShooting

state "Not Shooting State" as NotShooting {
  state "Idle mode" as Idle <<Warning>>
  state "Configuring mode" as Configuring
  [*] --> Idle
  Idle --> Configuring : EvConfig
  Configuring --> Idle : EvConfig
}

NotShooting --> [*]
@enduml

```

9.20 Changing style

You can change style.

```
@startuml
```

```

<style>
stateDiagram {
  BackgroundColor Peru
  'LineColor Gray
  FontName Impact
  FontColor Red
  arrow {
    FontSize 13
    LineColor Blue
  }
}
</style>

```

```
[*] --> NotShooting
```

```

state "Not Shooting State" as NotShooting {
  state "Idle mode" as Idle <<Warning>>
  state "Configuring mode" as Configuring
  [*] --> Idle
  Idle --> Configuring : EvConfig
  Configuring --> Idle : EvConfig
}

```

```
NotShooting --> [*]
```

```
@enduml
```

9.21 Change state color and style (inline style)

You can change the color or style of individual state using the following notation:

- `#color ##[style]color`

With background color first (`#color`), then line style and line color (`##[style]color`).

```

@startuml
state FooGradient #red-green ##00FFFF
state FooDashed #red|green ##[dashed]blue {
}
state FooDotted ##[dotted]blue {
}
state FooBold ##[bold] {
}
state Foo1 ##[dotted]green {
state inner1 ##[dotted]yellow
}
  
```

```

state out ##[dotted]gold
  
```

```

state Foo2 ##[bold]green {
state inner2 ##[dotted]yellow
}
inner1 -> inner2
out -> inner2
@enduml
  
```

[Ref. QA-1487]

- #color;line:color;line.[bold|dashed|dotted];text:color

TODO: FIXME text:color seems not to be taken into account **TODO: FIXME**

```
@startuml
@startuml
state FooGradient #red-green;line:00FFFF
state FooDashed #red|green;line.dashed;line:blue {
}
state FooDotted #line.dotted;line:blue {
}
state FooBold #line.bold {
}
state Foo1 #line.dotted;line:green {
state inner1 #line.dotted;line:yellow
}

state out #line.dotted;line:gold

state Foo2 #line.bold;line:green {
state inner2 #line.dotted;line:yellow
}
inner1 -> inner2
out -> inner2
@enduml
@enduml
```

```
@startuml
state s1 : s1 description
state s2 #pink;line:red;line.bold;text:red : s2 description
state s3 #palegreen;line:green;line.dashed;text:green : s3 description
state s4 #aliceblue;line:blue;line.dotted;text:blue : s4 description
@enduml
```

[Adapted from QA-3770]

10 Timing Diagram

This is still under construction. You can propose new features if you need some.

10.1 Declaring participant

You declare participant using the following keywords, depending on how you want them to be drawn.

- **concise**: A simplified signal designed to show the movement of data (great for messages).
- **robust**: A complex line signal designed to show the transition from one state to another (can have many states).
- **clock**: A 'clocked' signal that repeatedly transitions from high to low
- **binary**: A specific signal restricted to only 2 states (binary).

You define state change using the @ notation, and the **is** verb.

```
@startuml
robust "Web Browser" as WB
concise "Web User" as WU

@0
WU is Idle
WB is Idle

@100
WU is Waiting
WB is Processing

@300
WB is Waiting
WU is Idle

@enduml
```

10.2 Binary and Clock

It's also possible to have binary and clock signal, using the following keywords:

- **binary**
- **clock**

```
@startuml
clock clk with period 1
binary "Enable" as EN

@0
EN is low

@5
EN is high

@10
```

EN is low
@enduml

10.3 Adding message

You can add message using the following syntax.

```
@startuml
robust "Web Browser" as WB
concise "Web User" as WU
```

```
@0
WU is Idle
WB is Idle
```

```
@100
WU -> WB : URL
WU is Waiting
WB is Processing
```

```
@300
WB is Waiting
@enduml
```

10.4 Relative time

It is possible to use relative time with @.

```
@startuml
robust "DNS Resolver" as DNS
robust "Web Browser" as WB
concise "Web User" as WU
```

```
@0
WU is Idle
WB is Idle
DNS is Idle
```

```
@+100
WU -> WB : URL
WU is Waiting
WB is Processing
```

```
@+200
WB is Waiting
```

```
WB -> DNS@+50 : Resolve URL
```

```
@+100
```

```
DNS is Processing
```

```
@+300
```

```
DNS is Idle
```

```
@enduml
```

10.5 Anchor Points

Instead of using absolute or relative time on an absolute time you can define a time as an anchor point by using the `as` keyword and starting the name with a `:`.

```
@XX as :<anchor point name>
```

```
@startuml
```

```
clock clk with period 1
```

```
binary "enable" as EN
```

```
concise "dataBus" as db
```

```
@0 as :start
```

```
@5 as :en_high
```

```
@10 as :en_low
```

```
@:start
```

```
EN is low
```

```
db is "0x0000"
```

```
@:en_high
```

```
EN is high
```

```
@:en_low
```

```
EN is low
```

```
@:en_high-2
```

```
db is "0xf23a"
```

```
@:en_high+6
```

```
db is "0x0000"
```

```
@enduml
```

10.6 Participant oriented

Rather than declare the diagram in chronological order, you can define it by participant.

```
@startuml
robust "Web Browser" as WB
concise "Web User" as WU
```

```
@WB
0 is idle
+200 is Proc.
+100 is Waiting
```

```
@WU
0 is Waiting
+500 is ok
@enduml
```

10.7 Setting scale

You can also set a specific scale.

```
@startuml
concise "Web User" as WU
scale 100 as 50 pixels
```

```
@WU
0 is Waiting
+500 is ok
@enduml
```

10.8 Initial state

You can also define an initial state.

```
@startuml
robust "Web Browser" as WB
```

concise "Web User" as WU

WB is Initializing

WU is Absent

@WB

0 is idle

+200 is Processing

+100 is Waiting

@WU

0 is Waiting

+500 is ok

@enduml

10.9 Intricated state

A signal could be in some undefined state.

@startuml

robust "Signal1" as S1

robust "Signal2" as S2

S1 has 0,1,2,hello

S2 has 0,1,2

@0

S1 is 0

S2 is 0

@100

S1 is {0,1} #SlateGrey

S2 is {0,1}

@200

S1 is 1

S2 is 0

@300

S1 is hello

S2 is {0,2}

@enduml

10.10 Hidden state

It is also possible to hide some state.

```
@startuml
concise "Web User" as WU

@0
WU is {-}

@100
WU is A1

@200
WU is {-}

@300
WU is {hidden}

@400
WU is A3

@500
WU is {-}
@enduml
```

10.11 Hide time axis

It is possible to hide time axis.

```
@startuml
hide time-axis
concise "Web User" as WU

WU is Absent

@WU
0 is Waiting
+500 is ok
@enduml
```

10.12 Using Time and Date

It is possible to use time or date.

```
@startuml
robust "Web Browser" as WB
concise "Web User" as WU

@2019/07/02
WU is Idle
```

WB is Idle

@2019/07/04

WU is Waiting : some note

WB is Processing : some other note

@2019/07/05

WB is Waiting

@enduml

@startuml

robust "Web Browser" as WB

concise "Web User" as WU

@1:15:00

WU is Idle

WB is Idle

@1:16:30

WU is Waiting : some note

WB is Processing : some other note

@1:17:30

WB is Waiting

@enduml

10.13 Adding constraint

It is possible to display time constraints on the diagrams.

@startuml

robust "Web Browser" as WB

concise "Web User" as WU

WB is Initializing

WU is Absent

@WB

0 is idle

+200 is Processing

```
+100 is Waiting
WB@0 <-> @50 : {50 ms lag}
```

```
@WU
0 is Waiting
+500 is ok
@200 <-> @+150 : {150 ms}
@enduml
```

10.14 Highlighted period

You can highlight a part of diagram.

```
@startuml
robust "Web Browser" as WB
concise "Web User" as WU

@0
WU is Idle
WB is Idle

@100
WU -> WB : URL
WU is Waiting #LightCyan;line:Aqua

@200
WB is Proc.

@300
WU -> WB@350 : URL2
WB is Waiting

@+200
WU is ok

@+200
WB is Idle

highlight 200 to 450 #Gold;line:DimGrey : This is my caption
@enduml
```

10.15 Adding texts

You can optionally add a title, a header, a footer, a legend and a caption:

```
@startuml
Title This is my title
header: some header
footer: some footer
legend
Some legend
end legend
caption some caption

robust "Web Browser" as WB
concise "Web User" as WU

@0
WU is Idle
WB is Idle

@100
WU is Waiting
WB is Processing

@300
WB is Waiting
@enduml
```

10.16 Complete example

Thanks to Adam Rosien for this example.

```
@startuml
concise "Client" as Client
concise "Server" as Server
```

concise "Response freshness" as Cache

Server is idle

Client is idle

@Client

0 is send

Client -> Server@+25 : GET

+25 is await

+75 is recv

+25 is idle

+25 is send

Client -> Server@+25 : GET\nIf-Modified-Since: 150

+25 is await

+50 is recv

+25 is idle

@100 <-> @275 : no need to re-request from server

@Server

25 is recv

+25 is work

+25 is send

Server -> Client@+25 : 200 OK\nExpires: 275

+25 is idle

+75 is recv

+25 is send

Server -> Client@+25 : 304 Not Modified

+25 is idle

@Cache

75 is fresh

+200 is stale

@enduml

10.17 Digital Example

@startuml

scale 5 as 150 pixels

clock clk with period 1

binary "enable" as en

binary "R/W" as rw

binary "data Valid" as dv

concise "dataBus" as db

concise "address bus" as addr

```
@6 as :write_beg
@10 as :write_end

@15 as :read_beg
@19 as :read_end

@0
en is low
db is "0x0"
addr is "0x03f"
rw is low
dv is 0

@:write_beg-3
  en is high

  db is "0xDEADBEEF"
@:write_beg-1
  dv is 1
@:write_beg
  rw is high

@:write_end
  rw is low
  dv is low
@:write_end+1
  rw is low
  db is "0x0"
  addr is "0x23"

@12
dv is high
@13
db is "0xFFFF"

@20
en is low
dv is low
@21
db is "0x0"

highlight :write_beg to :write_end #Gold:Write
highlight :read_beg to :read_end #lightBlue:Read

db@:write_beg-1 <-> @:write_end : setup time
db@:write_beg-1 -> addr@:write_end+1 : hold
@enduml
```

10.18 Adding color

You can add color.

```
@startuml
concise "LR" as LR
concise "ST" as ST
```

```
LR is AtPlace #palegreen
ST is AtLoad #gray
```

```
@LR
0 is Lowering
100 is Lowered #pink
350 is Releasing
```

```
@ST
200 is Moving
@enduml
```

[Ref. QA-5776]

11 Display JSON Data

JSON format is widely used in software.

You can use PlantUML to visualize your data.

To activate this feature, the diagram must:

- begin with `@startjson` keyword
- end with `@endjson` keyword.

```
@startjson
{
  "fruit": "Apple",
  "size": "Large",
  "color": "Red"
}
@endjson
```

fruit	Apple
size	Large
color	Red

11.1 Complex example

You can use complex JSON structure.

```
@startjson
{
  "firstName": "John",
  "lastName": "Smith",
  "isAlive": true,
  "age": 27,
  "address": {
    "streetAddress": "21 2nd Street",
    "city": "New York",
    "state": "NY",
    "postalCode": "10021-3100"
  },
  "phoneNumbers": [
    {
      "type": "home",
      "number": "212 555-1234"
    },
    {
      "type": "office",
      "number": "646 555-4567"
    }
  ],
  "children": [],
  "spouse": null
}
@endjson
```

11.2 Highlight parts

```
@startjson
#highlight "lastName"
#highlight "address" / "city"
#highlight "phoneNumbers" / "0" / "number"
{
  "firstName": "John",
  "lastName": "Smith",
  "isAlive": true,
  "age": 28,
  "address": {
    "streetAddress": "21 2nd Street",
    "city": "New York",
    "state": "NY",
    "postalCode": "10021-3100"
  },
  "phoneNumbers": [
    {
      "type": "home",
      "number": "212 555-1234"
    },
    {
      "type": "office",
      "number": "646 555-4567"
    }
  ],
  "children": [],
  "spouse": null
}
@endjson
```

11.3 JSON basic element

11.3.1 Synthesis of all JSON basic element

```
@startjson
```

```

{
  "null": null,
  "true": true,
  "false": false,
  "JSON_Number": [-1, -1.1, "<color:green>TBC"],
  "JSON_String": "a\\nb\\rc\\td <color:green>TBC...",
  "JSON_Object": {
    "{}": {},
    "k_int": 123,
    "k_str": "abc",
    "k_obj": {"k": "v"}
  },
  "JSON_Array" : [
    [],
    [true, false],
    [-1, 1],
    ["a", "b", "c"],
    ["mix", null, true, 1, {"k": "v"}]
  ]
}
@endjson

```

11.4 JSON array or table

11.4.1 Array type

```

@startjson
{
  "Numeric": [1, 2, 3],
  "String ": ["v1a", "v2b", "v3c"],
  "Boolean": [true, false, true]
}

```

```
@endjson
```

11.4.2 Minimal array or table

11.4.3 Number array

```
@startjson
[1, 2, 3]
@endjson
```

11.4.4 String array

```
@startjson
["1a", "2b", "3c"]
@endjson
```

11.4.5 Boolean array

```
@startjson
[true, false, true]
@endjson
```

11.5 JSON numbers

```
@startjson
{
  "DecimalNumber": [-1, 0, 1],
  "DecimalNumber . Digits": [-1.1, 0.1, 1.1],
  "DecimalNumber ExponentPart": [1E5]
}
@endjson
```

11.6 JSON strings

11.6.1 JSON Unicode

On JSON you can use Unicode directly or by using escaped form like .

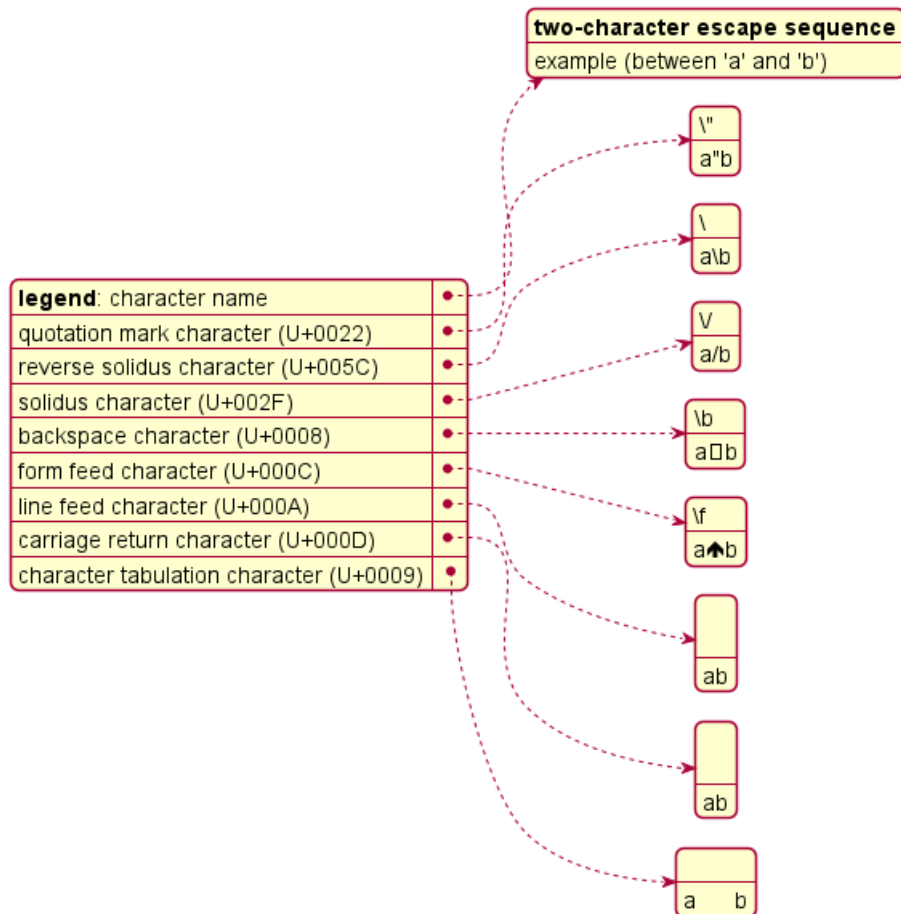

```
@startjson
{
  "<color:blue><b>code": "<color:blue><b>value",
  "a\\u005Cb":      "a\\u005Cb",
  "\\uD83D\\uDE10": "\\uD83D\\uDE10",
  " ":              " "
}
@endjson
```

code	value
a\\u005Cb	a\\b
\\uD83D\\uDE10	😄
😊	😊

11.6.2 JSON two-character escape sequence

```
@startjson
{
  "***legend**": "character name":
  "quotation mark character (U+0022)": ["**two-character escape sequence**", "example (between",
  "reverse solidus character (U+005C)": ["\\", "a\\b"],
  "solidus character (U+002F)": ["\\/", "a\\/b"],
  "backspace character (U+0008)": ["\\b", "a\\bb"],
  "form feed character (U+000C)": ["\\f", "a\\fb"],
  "line feed character (U+000A)": ["\\n", "a\\nb"],
  "carriage return character (U+000D)": ["\\r", "a\\rb"],
  "character tabulation character (U+0009)": ["\\t", "a\\tb"]
}
@endjson
```

TODO: FIXME FIXME or not , on the same item as management in PlantUML **TODO:** FIXME

```
@startjson
[
  "\\\\",
  "\\n",
  "\\r",
  "\\t"
]
@endjson
```

11.7 Minimal JSON examples

```
@startjson
"Hello world!"
@endjson
```

Hello world!

```
@startjson
```

```
42
@endjson
```

```
@startjson
true
@endjson
```

(Examples come from STD 90 - Examples)

11.8 Using (global) style

11.8.1 Without style (by default)

```
@startjson
#highlight "1" / "hr"
[
  {
    "name": "Mark McGwire",
    "hr": 65,
    "avg": 0.278
  },
  {
    "name": "Sammy Sosa",
    "hr": 63,
    "avg": 0.288
  }
]
@endjson
```

11.8.2 With style

You can use style to change rendering of elements.

```
@startjson
<style>
jsonDiagram {
  node {
    BackgroundColor Khaki
    LineColor lightblue
    FontName Helvetica
    FontColor red
    FontSize 18
    FontStyle bold
    RoundCorner 0
    LineThickness 2
    LineStyle 10;5
```

```

    separator {
        LineThickness 0.5
        LineColor black
        LineStyle 1;5
    }
}
arrow {
    BackGroundColor lightblue
    LineColor green
    LineThickness 2
    LineStyle 2;5
}
highlight {
    BackGroundColor red
    FontColor white
    FontStyle italic
}
}
</style>
#highlight "1" / "hr"
[
    {
        "name": "Mark McGwire",
        "hr": 65,
        "avg": 0.278
    },
    {
        "name": "Sammy Sosa",
        "hr": 63,
        "avg": 0.288
    }
]
@endjson

```

[Adapted from QA-13123 and QA-13288]

12 Display YAML Data

YAML format is widely used in software.

You can use PlantUML to visualize your data.

To activate this feature, the diagram must:

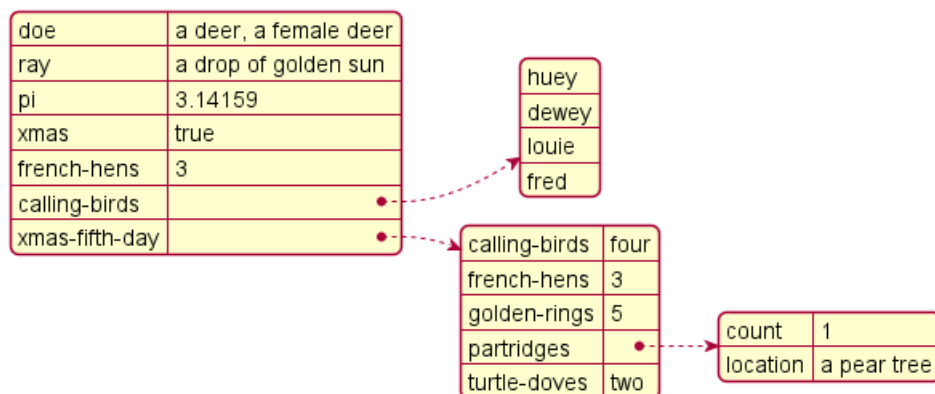

- begin with `@startyaml` keyword
- end with `@endyaml` keyword.

```
@startyaml
fruit: Apple
size: Large
color: Red
@endyaml
```

fruit	Apple
size	Large
color	Red

12.1 Complex example

```
@startyaml
doe: "a deer, a female deer"
ray: "a drop of golden sun"
pi: 3.14159
xmas: true
french-hens: 3
calling-birds:
- huey
- dewey
- louie
- fred
xmas-fifth-day:
calling-birds: four
french-hens: 3
golden-rings: 5
partridges:
count: 1
location: "a pear tree"
turtle-doves: two
@endyaml
```

12.2 Specific key (with symbols or unicode)

```
@startyaml
@fruit: Apple
$size: Large
&color: Red
: Heart
%: Per mille
@endyaml
```

@fruit	Apple
\$size	Large
&color	Red
♥	Heart
‰	Per mille

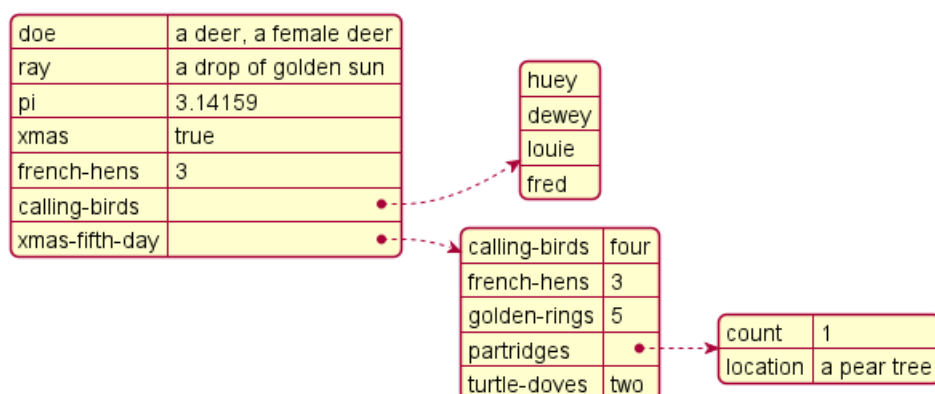

[Ref. QA-13376]

12.3 Highlight parts

12.3.1 Normal style

```
@startyaml
#highlight "french-hens"
#highlight "xmas-fifth-day" / "partridges"

doe: "a deer, a female deer"
ray: "a drop of golden sun"
pi: 3.14159
xmas: true
french-hens: 3
calling-birds:
- huey
- dewey
- louie
- fred
xmas-fifth-day:
calling-birds: four
french-hens: 3
golden-rings: 5
partridges:
count: 1
location: "a pear tree"
turtle-doves: two
@endyaml
```

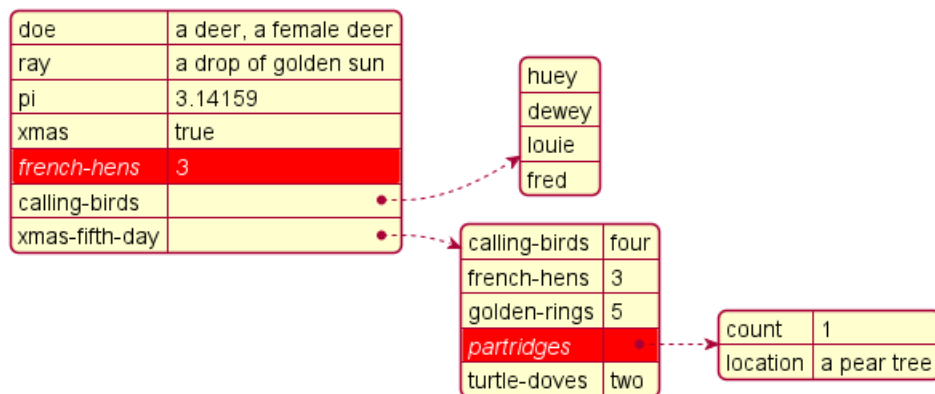

12.3.2 Customised style

```

@startyaml
<style>
yamlDiagram {
  highlight {
    BackGroundColor red
    FontColor white
    FontStyle italic
  }
}
</style>
#highlight "french-hens"
#highlight "xmas-fifth-day" / "partridges"

doe: "a deer, a female deer"
ray: "a drop of golden sun"
pi: 3.14159
xmas: true
french-hens: 3
calling-birds:
- huey
- dewey
- louie
- fred
xmas-fifth-day:
calling-birds: four
french-hens: 3
golden-rings: 5
partridges:
count: 1
location: "a pear tree"
turtle-doves: two
@endyaml

```

[Ref. QA-13288]

12.4 Using (global) style

12.4.1 Without style (by default)

```

@startyaml
-
  name: Mark McGwire
  hr: 65
  avg: 0.278

```

```
-
  name: Sammy Sosa
  hr:   63
  avg:  0.288
@endyaml
```

12.4.2 With style

You can use style to change rendering of elements.

```
@startyaml
<style>
yamlDiagram {
  node {
    BackgroundColor lightblue
    LineColor lightblue
    FontName Helvetica
    FontColor red
    FontSize 18
    FontStyle bold
    BackgroundColor Khaki
    RoundCorner 0
    LineThickness 2
    LineStyle 10;5
    separator {
      LineThickness 0.5
      LineColor black
      LineStyle 1;5
    }
  }
  arrow {
    BackgroundColor lightblue
    LineColor green
    LineThickness 2
    LineStyle 2;5
  }
}
</style>
-
  name: Mark McGwire
  hr:   65
  avg:  0.278
-
  name: Sammy Sosa
  hr:   63
  avg:  0.288
@endyaml
```

[Ref. QA-13123]

13 Network diagram (nwdiag)

nwdiag has been created by Takeshi Komiya and allows to quickly draw network diagrams. So we thank him for his creation!

Since the syntax is clear and simple, this has been integrated within PlantUML. We reuse here the examples that Takeshi has documented.

13.1 Simple diagram

```
@startuml
nwdiag {
  network dmz {
    address = "210.x.x.x/24"

    web01 [address = "210.x.x.1"];
    web02 [address = "210.x.x.2"];
  }
  network internal {
    address = "172.x.x.x/24";

    web01 [address = "172.x.x.1"];
    web02 [address = "172.x.x.2"];
    db01;
    db02;
  }
}
@enduml
```

13.2 Define multiple addresses

```
@startuml
nwdiag {
  network dmz {
    address = "210.x.x.x/24"

    // set multiple addresses (using comma)
    web01 [address = "210.x.x.1, 210.x.x.20"];
    web02 [address = "210.x.x.2"];
  }
  network internal {
    address = "172.x.x.x/24";

    web01 [address = "172.x.x.1"];
    web02 [address = "172.x.x.2"];
    db01;
  }
}
@enduml
```

```

    db02;
  }
}
@enduml

```

13.3 Grouping nodes

13.3.1 Define group inside network definitions

```

@startuml
nwdiag {
  network Sample_front {
    address = "192.168.10.0/24";

    // define group
    group web {
      web01 [address = ".1"];
      web02 [address = ".2"];
    }
  }
  network Sample_back {
    address = "192.168.20.0/24";
    web01 [address = ".1"];
    web02 [address = ".2"];
    db01 [address = ".101"];
    db02 [address = ".102"];

    // define network using defined nodes
    group db {
      db01;
      db02;
    }
  }
}
@enduml

```

13.3.2 Define group outside of network definitions

```

@startuml
nwdiag {
    // define group outside of network definitions
    group {
        color = "#FFAAAA";

        web01;
        web02;
        db01;
    }

    network dmz {
        web01;
        web02;
    }
    network internal {
        web01;
        web02;
        db01;
        db02;
    }
}
@enduml

```

13.3.3 Define several groups on same network

13.3.4 Example with 2 group

```

@startuml
nwdiag {
    group {

```

```

    color = "#FFaaaa";
    web01;
    db01;
}
group {
    color = "#aaaaFF";
    web02;
    db02;
}
network dmz {
    address = "210.x.x.x/24"

    web01 [address = "210.x.x.1"];
    web02 [address = "210.x.x.2"];
}
network internal {
    address = "172.x.x.x/24";

    web01 [address = "172.x.x.1"];
    web02 [address = "172.x.x.2"];
    db01 ;
    db02 ;
}
}
@enduml

```

[Ref. QA-12663]

13.3.5 Example with 3 groups

```

@startuml
nwdiag {
    group {
        color = "#FFaaaa";
        web01;
        db01;
    }
    group {
        color = "#aaFFaa";
        web02;
        db02;
    }
    group {
        color = "#aaaaFF";
        web03;
        db03;
    }
}

```

```

}

network dmz {
    web01;
    web02;
    web03;
}
network internal {
    web01;
    db01 ;
    web02;
    db02 ;
    web03;
    db03;
}
}
@enduml

```

[Ref. QA-13138]

13.4 Extended Syntax (for network or group)

13.4.1 Network

For network or network's component, you can add or change:

- addresses (*separated by comma ,*);
- color;
- description;
- shape.

```

@startuml
nwdiag {
    network Sample_front {
        address = "192.168.10.0/24"
        color = "red"

        // define group
        group web {
            web01 [address = ".1, .2", shape = "node"]
            web02 [address = ".2, .3"]
        }
    }
    network Sample_back {
        address = "192.168.20.0/24"
        color = "palegreen"
        web01 [address = ".1"]
    }
}

```

```

web02 [address = ".2"]
db01 [address = ".101", shape = database ]
db02 [address = ".102"]

// define network using defined nodes
group db {
    db01;
    db02;
}
}
}
@enduml

```

13.4.2 Group

For a group, you can add or change:

- color;
- description.

```

@startuml
nwdiag {
    group {
        color = "#CCFFCC";
        description = "Long group description";

        web01;
        web02;
        db01;
    }

    network dmz {
        web01;
        web02;
    }
    network internal {
        web01;
        web02;
        db01 [address = ".101", shape = database];
    }
}
}
@enduml

```

[Ref. QA-12056]

13.5 Using Sprites

You can use all sprites (icons) from the Standard Library or any other library.

Use the notation `<$sprite>` to use a sprite, to make a new line, or any other Creole syntax.

```

@startuml
!include <office/Servers/application_server>
!include <office/Servers/database_server>

nwdiag {
  network dmz {
    address = "210.x.x.x/24"

    // set multiple addresses (using comma)
    web01 [address = "210.x.x.1, 210.x.x.20", description = "<$application_server>\n web01"]
    web02 [address = "210.x.x.2", description = "<$application_server>\n web02"];
  }
  network internal {
    address = "172.x.x.x/24";

    web01 [address = "172.x.x.1"];
    web02 [address = "172.x.x.2"];
    db01 [address = "172.x.x.100", description = "<$database_server>\n db01"];
    db02 [address = "172.x.x.101", description = "<$database_server>\n db02"];
  }
}
@enduml

```

[Ref. QA-11862]

13.6 Using OpenIconic

You can also use the icons from OpenIconic in network or node descriptions.

Use the notation `<&icon>` to make an icon, `<&icon*n>` to multiply the size by a factor `n`, and `\n` to make a newline:

```

@startuml

nwdiag {
  group nightly {
    color = "#FFAAAA";
    description = "<&clock> Restarted nightly <&clock>";
    web02;
    db01;
  }
  network dmz {
    address = "210.x.x.x/24"

    user [description = "<&person*4.5>\n user1"];
    // set multiple addresses (using comma)
    web01 [address = "210.x.x.1, 210.x.x.20", description = "<&cog*4>\nweb01"]
    web02 [address = "210.x.x.2", description = "<&cog*4>\nweb02"];
  }
  network internal {
    address = "172.x.x.x/24";

    web01 [address = "172.x.x.1"];
    web02 [address = "172.x.x.2"];
    db01 [address = "172.x.x.100", description = "<&spreadsheet*4>\n db01"];
    db02 [address = "172.x.x.101", description = "<&spreadsheet*4>\n db02"];
    ptr [address = "172.x.x.110", description = "<&print*4>\n ptr01"];
  }
}
@enduml

```

13.7 Same nodes on more than two networks

You can use same nodes on different networks (more than two networks); *nwdiag* use in this case 'jump line' over networks.

```
@startuml
nwdiag {
  // define group at outside network definitions
  group {
    color = "#7777FF";

    web01;
    web02;
    db01;
  }

  network dmz {
    color = "pink"

    web01;
    web02;
  }

  network internal {
    web01;
    web02;
    db01 [shape = database ];
  }

  network internal2 {
    color = "LightBlue";

    web01;
    web02;
    db01;
  }
}
@enduml
```

13.8 Peer networks

Peer networks are simple connections between two nodes, for which we don't use a horizontal "busbar" network

```
@startuml
nwdiag {
  inet [shape = cloud];
  inet -- router;

  network {
    router;
    web01;
    web02;
  }
}
@enduml
```

13.9 Peer networks and group

13.9.1 Without group

```
@startuml
nwdiag {
  internet [ shape = cloud];
  internet -- router;
```

```

network proxy {
    router;
    app;
}
network default {
    app;
    db;
}
}
@enduml

```

13.9.2 Group on first

```

@startuml
nwdiag {
    internet [ shape = cloud];
    internet -- router;

    group {
        color = "pink";
        app;
        db;
    }

    network proxy {
        router;
        app;
    }

    network default {
        app;
        db;
    }
}
@enduml

```

13.9.3 Group on second

```

@startuml
nwdiag {
    internet [ shape = cloud];
    internet -- router;

    network proxy {
        router;
        app;
    }

    group {
        color = "pink";
        app;
        db;
    }

    network default {
        app;
        db;
    }
}
@enduml

```

TODO: FIXME Why the line on proxy for 'db'? ('db' must be only on 'default network') [See example without group]

13.9.4 Group on third

```

@startuml
nwdiag {
    internet [ shape = cloud];
    internet -- router;

    network proxy {
        router;
        app;
    }
    network default {
        app;
        db;
    }
    group {
        color = "pink";
        app;
        db;
    }
}
@enduml

```

TODO: FIXME [Ref. Issue#408 and QA-12655] **TODO:** Not totally fixed

13.10 Add title, caption, header, footer or legend on network diagram

```
@startuml

header some header

footer some footer

title My title

nwdiag {
    network inet {
        web01 [shape = cloud]
    }
}

legend
The legend
end legend

caption This is caption
@enduml
```

[Ref. QA-11303 and Common commands]

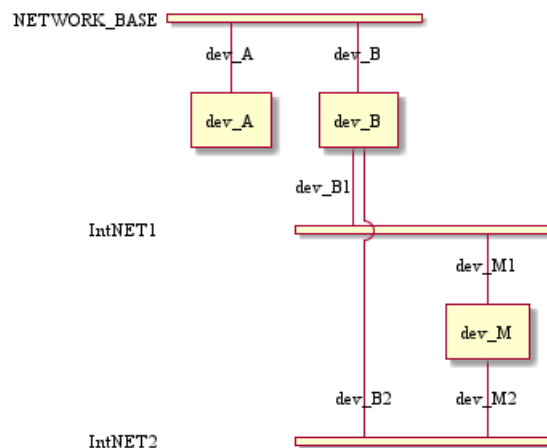

13.11 Change width of the networks

You can change the width of the networks, especially in order to have the same full width for only some or all networks.

Here are some examples, with all the possibilities:

- without

```
@startuml
nwdiag {
  network NETWORK_BASE {
    dev_A [address = "dev_A" ]
    dev_B [address = "dev_B" ]
  }
  network IntNET1 {
    dev_B [address = "dev_B1" ]
    dev_M [address = "dev_M1" ]
  }
  network IntNET2 {
    dev_B [address = "dev_B2" ]
    dev_M [address = "dev_M2" ]
  }
}
@enduml
```

- only the first

```
@startuml
```

```

nwdiag {
  network NETWORK_BASE {
    width = full
    dev_A [address = "dev_A" ]
    dev_B [address = "dev_B" ]
  }
  network IntNET1 {
    dev_B [address = "dev_B1" ]
    dev_M [address = "dev_M1" ]
  }
  network IntNET2 {
    dev_B [address = "dev_B2" ]
    dev_M [address = "dev_M2" ]
  }
}
@enduml

```

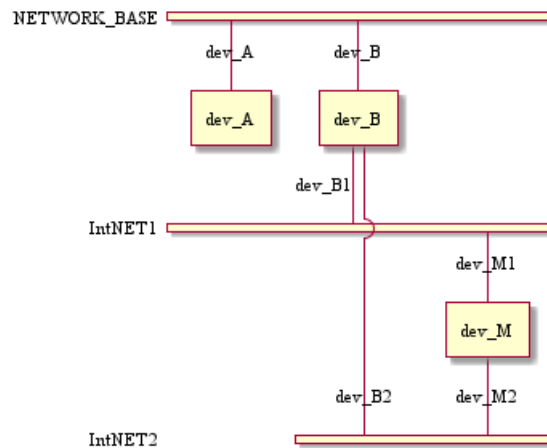

- the first and the second

```

@startuml
nwdiag {
  network NETWORK_BASE {
    width = full
    dev_A [address = "dev_A" ]
    dev_B [address = "dev_B" ]
  }
  network IntNET1 {
    width = full
    dev_B [address = "dev_B1" ]
    dev_M [address = "dev_M1" ]
  }
  network IntNET2 {
    dev_B [address = "dev_B2" ]
    dev_M [address = "dev_M2" ]
  }
}
@enduml

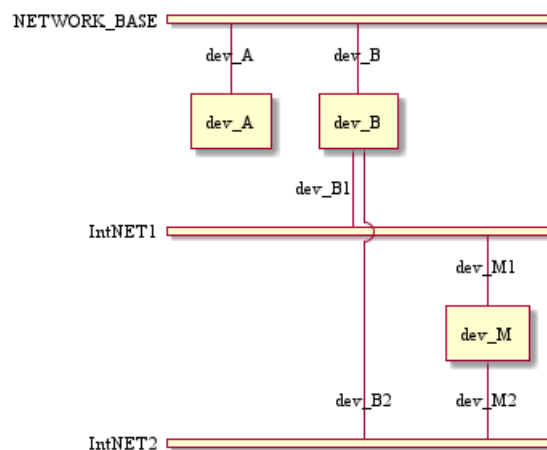

```

- all the network (with same full width)

```

@startuml
nwdiag {
  network NETWORK_BASE {
    width = full
    dev_A [address = "dev_A" ]
    dev_B [address = "dev_B" ]
  }
  network IntNET1 {
    width = full
    dev_B [address = "dev_B1" ]
    dev_M [address = "dev_M1" ]
  }
  network IntNET2 {
    width = full
    dev_B [address = "dev_B2" ]
    dev_M [address = "dev_M2" ]
  }
}
}
@enduml
  
```

13.12 Other internal networks

You can define other internal networks (TCP/IP, USB, SERIAL,...).

- Without adress or type

```
@startuml
nwdiag {
  network LAN1 {
    a [address = "a1"];
  }
  network LAN2 {
    a [address = "a2"];
    switch;
  }
  switch -- equip;
  equip -- printer;
}
@enduml
```

- With adress or type

```
@startuml
nwdiag {
  network LAN1 {
    a [address = "a1"];
  }
  network LAN2 {
    a [address = "a2"];
    switch [address = "s2"];
  }
  switch -- equip;
  equip [address = "e3"];
  equip -- printer;
  printer [address = "USB"];
}
@enduml
```

[Ref. QA-12824]

14 Salt (Wireframe)

Salt is a subproject included in PlantUML that may help you to design graphical interface or *Website Wireframe* or *Page Schematic* or *Screen Blueprint*.

The goal of this tool is to discuss about simple and sample windows.

You can use either `@startsalt` keyword, or `@startuml` followed by a line with `salt` keyword.

14.1 Basic widgets

A window must start and end with brackets. You can then define:

- Button using `[` and `]`.
- Radio button using `(` and `)`.
- Checkbox using `[` and `]`.
- User text area using `"`.
- Droplist using `^`.

```
@startsalt
{
  Just plain text
  [This is my button]
  () Unchecked radio
  (X) Checked radio
  [] Unchecked box
  [X] Checked box
  "Enter text here  "
  ^This is a droplist^
}
@endsalt
```

14.2 Using grid [[]]

A table is automatically created when you use an opening bracket `{`. And you have to use `|` to separate columns.

For example:

```
@startsalt
{
  Login    | "MyName  "
  Password | "****    "
  [Cancel] | [ OK    ]
}
@endsalt
```

Just after the opening bracket, you can use a character to define if you want to draw lines or columns of the grid :

Symbol	Result
#	To display all vertical and horizontal lines
!	To display all vertical lines
-	To display all horizontal lines
+	To display external lines

```
@startsalt
{+
    Login    | "MyName  "
    Password | "****   "
    [Cancel] | [ OK   ]
}
@endsalt
```

14.3 Group box [^]

```
@startsalt
{^"My group box"
    Login    | "MyName  "
    Password | "****   "
    [Cancel] | [ OK   ]
}
@endsalt
```

[Ref. QA-5840]

14.4 Using separator [..., ==, ~~ , -]

You can use several horizontal lines as separator.

```
@startsalt
{
    Text1
    ..
    "Some field"
    ==
    Note on usage
    ~~
    Another text
    --
    [Ok]
}
@endsalt
```

14.5 Tree widget [T]

To have a Tree, you have to start with {T and to use + to denote hierarchy.

```
@startsalt
{
{T
+ World
++ America
+++ Canada
+++ USA
++++ New York
++++ Boston
+++ Mexico
++ Europe
+++ Italy
+++ Germany
++++ Berlin
++ Africa
}
}
@endsalt
```

14.6 Tree table [T]

You can combine trees with tables.

```
@startsalt
{
{T
+Region      | Population   | Age
+ World     | 7.13 billion | 30
++ America  | 964 million  | 30
+++ Canada  | 35 million   | 30
+++ USA     | 319 million  | 30
++++ NYC    | 8 million    | 30
++++ Boston | 617 thousand | 30
+++ Mexico  | 117 million  | 30
++ Europe   | 601 million  | 30
+++ Italy   | 61 million   | 30
+++ Germany | 82 million   | 30
++++ Berlin | 3 million    | 30
}
```

```

++ Africa      | 1 billion    | 30
}
}
@endsalt

```

Region	Population	Age
World	7.13 billion	30
America	964 million	30
Canada	35 million	30
USA	319 million	30
NYC	8 million	30
Boston	617 thousand	30
Mexico	117 million	30
Europe	601 million	30
Italy	61 million	30
Germany	82 million	30
Berlin	3 million	30
Africa	1 billion	30

And add lines.

```

@startsalt
{
  ..
  == with T!
  {T!
  +Region      | Population    | Age
  + World      | 7.13 billion | 30
  ++ America   | 964 million  | 30
  }
  ..
  == with T-
  {T-
  +Region      | Population    | Age
  + World      | 7.13 billion | 30
  ++ America   | 964 million  | 30
  }
  ..
  == with T+
  {T+
  +Region      | Population    | Age
  + World      | 7.13 billion | 30
  ++ America   | 964 million  | 30
  }
  ..
  == with T#
  {T#
  +Region      | Population    | Age
  + World      | 7.13 billion | 30
  ++ America   | 964 million  | 30
  }
  ..
  }
@endsalt

```

with T!		
Region	Population	Age
World	7.13 billion	30
America	964 million	30

with T-		
Region	Population	Age
World	7.13 billion	30
America	964 million	30

with T+		
Region	Population	Age
World	7.13 billion	30
America	964 million	30

with T#		
Region	Population	Age
World	7.13 billion	30
America	964 million	30

[Ref. QA-1265]

14.7 Enclosing brackets [{, }]

You can define subelements by opening a new opening bracket.

```
@startsalt
{
  Name          | "          "
  Modifiers:    | { (X) public | () default | () private | () protected
                | [] abstract | [] final   | [] static }
  Superclass:   | { "java.lang.Object " | [Browse...] }
}
@endsalt
```

Name	<input type="text"/>
Modifiers:	<input checked="" type="radio"/> public <input type="radio"/> default <input type="radio"/> private <input type="radio"/> protected <input type="checkbox"/> abstract <input type="checkbox"/> final <input type="checkbox"/> static
Superclass:	<input type="text" value="java.lang.Object"/> <input type="button" value="Browse..."/>

14.8 Adding tabs [/]

You can add tabs using {/ notation. Note that you can use HTML code to have bold text.

```
@startsalt
{+
  {/ <b>General | Fullscreen | Behavior | Saving }
  {
    { Open image in: | ^Smart Mode^ }
    [X] Smooth images when zoomed
    [X] Confirm image deletion
    [ ] Show hidden images
  }
  [Close]
}
@endsalt
```

General	<input type="checkbox"/> Fullscreen	<input type="checkbox"/> Behavior	<input type="checkbox"/> Saving
Open image in: <input type="text" value="Smart Mode"/>			
<input checked="" type="checkbox"/> Smooth images when zoomed			
<input checked="" type="checkbox"/> Confirm image deletion			
<input type="checkbox"/> Show hidden images			
<input type="button" value="Close"/>			

Tab could also be vertically oriented:

```
@startsalt
{+
{/ <b>General
Fullscreen
Behavior
Saving } |
{
{ Open image in: | ^Smart Mode^ }
[X] Smooth images when zoomed
[X] Confirm image deletion
[ ] Show hidden images
[Close]
}
}
@endsalt
```

14.9 Using menu [*]

You can add a menu by using {* notation.

```
@startsalt
{+
{* File | Edit | Source | Refactor }
{/ General | Fullscreen | Behavior | Saving }
{
{ Open image in: | ^Smart Mode^ }
[X] Smooth images when zoomed
[X] Confirm image deletion
[ ] Show hidden images
}
[Close]
}
@endsalt
```

It is also possible to open a menu:

```
@startsalt
{+
{* File | Edit | Source | Refactor
  Refactor | New | Open File | - | Close | Close All }
{/ General | Fullscreen | Behavior | Saving }
{
{ Open image in: | ^Smart Mode^ }
```

```

[X] Smooth images when zoomed
[X] Confirm image deletion
[ ] Show hidden images
}
[Close]
}
@endsalt

```

14.10 Advanced table

You can use two special notations for table :

- * to indicate that a cell with span with left
- . to denote an empty cell

```

@startsalt
{#
. | Column 2 | Column 3
Row header 1 | value 1 | value 2
Row header 2 | A long cell | *
}
@endsalt

```

	Column 2	Column 3
Row header 1	value 1	value 2
Row header 2	A long cell	

14.11 Scroll Bars [S, SI, S-]

You can use {S notation for scroll bar like in following examples:

- {S: for horizontal and vertical scrollbars

```

@startsalt
{S
Message
.
.
.
.
}
@endsalt

```

- {SI : for vertical scrollbar only

```

@startsalt
{SI

```

```
Message
```

```
.
.
.
.
}
@endsalt
```

- {S- : for horizontal scrollbar only

```
@startsalt
{S-
Message
.
.
.
.
}
@endsalt
```

14.12 Colors

It is possible to change text color of widget.

```
@startsalt
{
  <color:Blue>Just plain text
  [This is my default button]
  [<color:green>This is my green button]
  [<color:#9a9a9a>This is my disabled button]
  [] <color:red>Unchecked box
  [X] <color:green>Checked box
  "Enter text here  "
  ^This is a droplist^
  ^<color:#9a9a9a>This is a disabled droplist^
  ^<color:red>This is a red droplist^
}
@endsalt
```

[Ref. QA-12177]

14.13 Pseudo sprite [«, »]

Using << and >> you can define a pseudo-sprite or sprite-like drawing and reusing it latter.

```
@startsalt
{
  [X] checkbox|[] checkbox
  () radio | (X) radio
  This is a text|[This is my button]|This is another text
  "A field"|"Another long Field"| [A button]
  <<folder
  .....
  .XXXXX.....
  .X...X.....
  .XXXXXXXXXX.
  .X.....X.
  .X.....X.
  .X.....X.
  .X.....X.
  .XXXXXX....
  .....
  >>|<color:blue>other folder|<<folder>>
  ^Droplist^
}
@endsalt
```

[Ref. QA-5849]

14.14 OpenIconic

OpenIconic is a very nice open source icon set. Those icons have been integrated into the creole parser, so you can use them out-of-the-box. You can use the following syntax: <&ICON_NAME>.

```
@startsalt
{
  Login<&person> | "MyName   "
  Password<&key> | "****    "
  [Cancel <&circle-x>] | [OK <&account-login>]
}

```

@endsalt

The complete list is available on OpenIconic Website, or you can use the following special diagram:

```
@startuml
listopeniconic
@enduml
```

14.15 Include Salt "on activity diagram"

You can read the following explanation.

```
@startuml
(*) --> "
{{
salt
{+
<b>an example
choose one option
()one
()two
[ok]
}
}}
" as choose

choose -right-> "
{{
salt
{+
<b>please wait
```

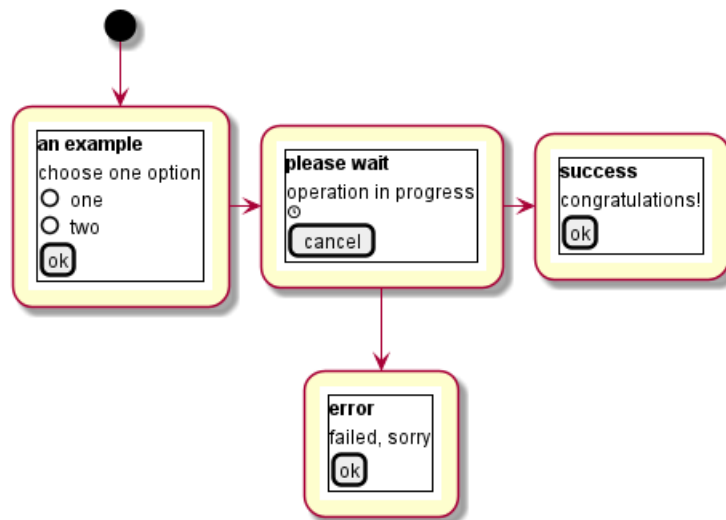

```

operation in progress
<&clock>
[cancel]
}
}}
" as wait
wait -right-> "
{{
salt
{+
<b>success
congratulations!
[ok]
}
}}
" as success

wait -down-> "
{{
salt
{+
<b>error
failed, sorry
[ok]
}
}}
"
@enduml

```

It can also be combined with define macro.

```

@startuml
!unquoted procedure SALT($x)
"{{
salt
%invoke_procedure("_" + $x)
}}" as $x
!endprocedure

!procedure _choose()
{+
<b>an example

```

```

choose one option
()one
()two
[ok]
}
!endprocedure

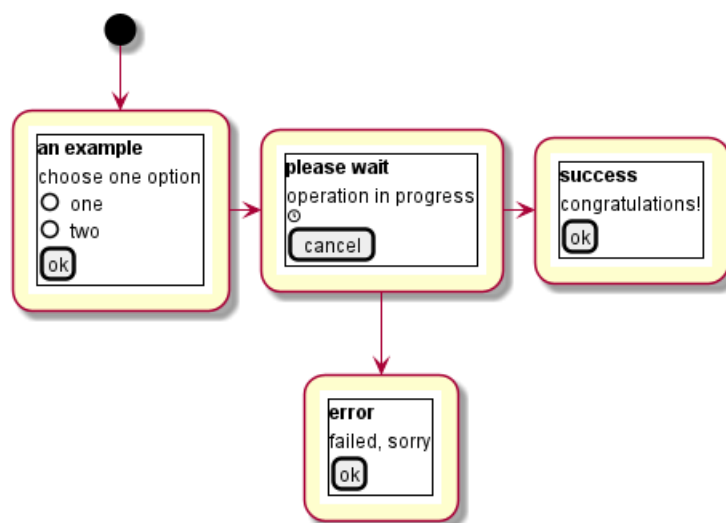

!procedure _wait()
{+
<b>please wait
operation in progress
<&clock>
[cancel]
}
!endprocedure

!procedure _success()
{+
<b>success
congratulations!
[ok]
}
!endprocedure

!procedure _error()
{+
<b>error
failed, sorry
[ok]
}
!endprocedure

(*) --> SALT(choose)
-right-> SALT(wait)
wait -right-> SALT(success)
wait -down-> SALT(error)
@enduml

```

14.16 Include salt "on while condition of activity diagram"

You can include **salt** on while condition of activity diagram.

```

@startuml
start
while (\n{\nsalt\n{+\nPassword | "****      "\n[Cancel] | [ OK  ]}\n}}\n) is (Incorrect)
  :log attempt;
  :attempt_count++;
  if (attempt_count > 4) then (yes)
    :increase delay timer;
    :wait for timer to expire;
  else (no)
  endif
endif
endwhile (correct)
:log request;
:disable service;
@enduml

```

[Ref. QA-8547]

15 Archimate Diagram

This is only a proposal and subject to change.

You are very welcome to create a new discussion on this future syntax. Your feedbacks, ideas and suggestions help us to find the right solution.

15.1 Archimate keyword

You can use the `archimate` keyword to define an element. Stereotype can optionally specify an additional icon. Some colors (Business, Application, Motivation, Strategy, Technology, Physical, Implementation) are also available.

```
@startuml
archimate #Technology "VPN Server" as vpnServerA <<technology-device>>

rectangle GO #lightgreen
rectangle STOP #red
rectangle WAIT #orange
@enduml
```

15.2 Defining Junctions

Using the `circle` keyword and the preprocessor, you can also create junctions.

```
@startuml
!define Junction_Or circle #black
!define Junction_And circle #whitesmoke

Junction_And JunctionAnd
Junction_Or JunctionOr

archimate #Technology "VPN Server" as vpnServerA <<technology-device>>

rectangle GO #lightgreen
rectangle STOP #red
rectangle WAIT #orange
GO -up-> JunctionOr
STOP -up-> JunctionOr
STOP -down-> JunctionAnd
WAIT -down-> JunctionAnd
@enduml
```

15.3 Example 1

```

@startuml
skinparam rectangle<<behavior>> {
  roundCorner 25
}
sprite $bProcess jar:archimate/business-process
sprite $aService jar:archimate/application-service
sprite $aComponent jar:archimate/application-component

rectangle "Handle claim" as HC <<$bProcess>><<behavior>> #Business
rectangle "Capture Information" as CI <<$bProcess>><<behavior>> #Business
rectangle "Notify\nAdditional Stakeholders" as NAS <<$bProcess>><<behavior>> #Business
rectangle "Validate" as V <<$bProcess>><<behavior>> #Business
rectangle "Investigate" as I <<$bProcess>><<behavior>> #Business
rectangle "Pay" as P <<$bProcess>><<behavior>> #Business

15.6 ArchiMate Macros

15.6.1 Archimate Macros and Library

A list of Archimate macros are defined Archimate-PlantUML here which simplifies the creation of ArchiMate diagrams, and Archimate is natively on the Standard Library of PlantUML.

15.6.2 Archimate elements

Using the macros, creation of ArchiMate elements are done using the following format: `Category_ElementName(nameOfThe "description")`

For example:

- To define a *Stakeholder* element, which is part of Motivation category, the syntax will be `Motivation_Stakeholder(S "Stakeholder Description")`:

```
@startuml
!include <archimate/Archimate>
Motivation_Stakeholder(StakeholderElement, "Stakeholder Description")
@enduml
```

- To define a *Business Service* element, `Business_Service(BService, "Business Service")`:

```
@startuml
!include <archimate/Archimate>
Business_Service(BService, "Business Service")
@enduml
```

15.6.3 Archimate relationships

The ArchiMate relationships are defined with the following pattern: `Rel_RelationType(fromElement, toElement, "description")` and to define the direction/orientation of the two elements: `Rel_RelationType_Direction toElement, "description")`

The `RelationTypes` supported are:

- Access
- Aggregation
- Assignment
- Association
- Composition
- Flow
- Influence
- Realization
- Serving
- Specialization
- Triggering

The `Directions` supported are:

- Up
- Down
- Left
- Right

For example:

- To denote a composition relationship between the *Stakeholder* and *Business Service* defined above, the syntax will be

```
Rel_Composition(StakeholderElement, BService, "Description for the relationship")

@startuml
!include <archimate/Archimate>
Motivation_Stakeholder(StakeholderElement, "Stakeholder Description")
```

```

Business_Service(BService, "Business Service")
Rel_Composition(StakeholderElement, BService, "Description for the relationship")
@enduml

```

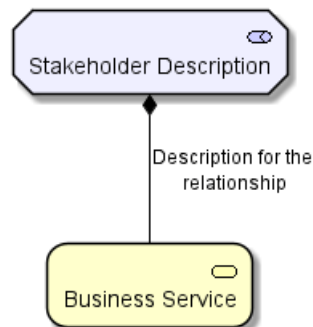

- Unordered List Item To orient the two elements in top - down position, the syntax will be

```

Rel_Composition_Down(StakeholderElement, BService, "Description for the relationship")
@startuml
!include <archimate/Archimate>
Motivation_Stakeholder(StakeholderElement, "Stakeholder Description")
Business_Service(BService, "Business Service")
Rel_Composition_Down(StakeholderElement, BService, "Description for the relationship")
@enduml

```

15.6.4 Appendix: Examples of all Archimate RelationTypes

```

@startuml
left to right direction
!include <archimate/Archimate>
Rel_Triggering(i15, j15, Triggering)
Rel_Specialization(i14, j14, Specialization)
Rel_Serving(i13, j13, Serving)
Rel_Realization(i12, j12, Realization)
Rel_Influence(i11, j11, Influence)
Rel_Flow(i10, j10, Flow)
Rel_Composition(i9, j9, Composition)
'Rel_Association_dir(i8, j8, Association_dir)
Rel_Association(i7, j7, Association)
Rel_Assignment(i6, j6, Assignment)
Rel_Aggregation(i5, j5, Aggregation)
Rel_Access_w(i4, j4, Access_w)
Rel_Access_rw(i3, j3, Access_rw)
Rel_Access_r(i2, j2, Access_r)
Rel_Access(i1, j1, Access)
@enduml

```

16 Gantt Diagram

The Gantt is described in *natural* language, using very simple sentences (subject-verb-complement).

16.1 Declaring tasks

Tasks defined using square bracket.

16.1.1 Duration

Their durations are defined using the **lasts** verb:

```
@startgantt
[Prototype design] lasts 15 days
[Test prototype] lasts 10 days
-- All example --
[Task 1 (1 day)] lasts 1 day
[T2 (5 days)] lasts 5 days
[T3 (1 week)] lasts 1 week
[T4 (1 week and 4 days)] lasts 1 week and 4 days
[T5 (2 weeks)] lasts 2 weeks
@endgantt
```

16.1.2 Start

Their beginning are defined using the **start** verb:

```
@startuml
[Prototype design] lasts 15 days
[Test prototype] lasts 10 days

Project starts 2020-07-01
[Prototype design] starts 2020-07-01
[Test prototype] starts 2020-07-16
@enduml
```

16.1.3 End

Their ending are defined using the **end** verb:

```
@startuml
[Prototype design] lasts 15 days
[Test prototype] lasts 10 days

Project starts 2020-07-01
[Prototype design] ends 2020-07-15
```

```
[Test prototype] ends 2020-07-25
```

```
@enduml
```

16.1.4 Start/End

It is possible to define both absolutely, by specifying dates:

```
@startuml
```

```
Project starts 2020-07-01
```

```
[Prototype design] starts 2020-07-01
```

```
[Test prototype] starts 2020-07-16
```

```
[Prototype design] ends 2020-07-15
```

```
[Test prototype] ends 2020-07-25
```

```
@enduml
```

16.2 One-line declaration (with the and conjunction)

It is possible to combine declaration on one line with the and conjunction.

```
@startuml
```

```
Project starts 2020-07-01
```

```
[Prototype design] starts 2020-07-01 and ends 2020-07-15
```

```
[Test prototype] starts 2020-07-16 and lasts 10 days
```

```
@enduml
```

16.3 Adding constraints

It is possible to add constraints between tasks.

```
@startgantt
```

```
[Prototype design] lasts 15 days
```

```
[Test prototype] lasts 10 days
```

```
[Test prototype] starts at [Prototype design]'s end
```

```
@endgantt
```

```

@startgantt
[Prototype design] lasts 10 days
[Code prototype] lasts 10 days
[Write tests] lasts 5 days
[Code prototype] starts at [Prototype design]'s end
[Write tests] starts at [Code prototype]'s start
@endgantt

```

16.4 Short names

It is possible to define short name for tasks with the `as` keyword.

```

@startgantt
[Prototype design] as [D] lasts 15 days
[Test prototype] as [T] lasts 10 days
[T] starts at [D]'s end
@endgantt

```

16.5 Customize colors

It is also possible to customize colors with `is colored in`.

```

@startgantt
[Prototype design] lasts 13 days
[Test prototype] lasts 4 days
[Test prototype] starts at [Prototype design]'s end
[Prototype design] is colored in Fuchsia/FireBrick
[Test prototype] is colored in GreenYellow/Green
@endgantt

```

16.6 Completion status

You can set the completion status of a task.

```

@startgantt
[foo] lasts 21 days
[foo] is 40% completed
[bar] lasts 30 days and is 10% complete
@endgantt

```

16.7 Milestone

You can define Milestones using the `happen` verb.

16.7.1 Relative milestone (use of constraints)

```
@startgantt
[Test prototype] lasts 10 days
[Prototype completed] happens at [Test prototype]'s end
[Setup assembly line] lasts 12 days
[Setup assembly line] starts at [Test prototype]'s end
@endgantt
```

16.7.2 Absolute milestone (use of fixed date)

```
@startgantt
Project starts 2020-07-01
[Test prototype] lasts 10 days
[Prototype completed] happens 2020-07-10
[Setup assembly line] lasts 12 days
[Setup assembly line] starts at [Test prototype]'s end
@endgantt
```

16.7.3 Milestone of maximum end of tasks

```
@startgantt
[Task1] lasts 4 days
then [Task1.1] lasts 4 days
[Task1.2] starts at [Task1]'s end and lasts 7 days

[Task2] lasts 5 days
then [Task2.1] lasts 4 days

[MaxTaskEnd] happens at [Task1.1]'s end
[MaxTaskEnd] happens at [Task1.2]'s end
[MaxTaskEnd] happens at [Task2.1]'s end
@endgantt
```

[Ref. QA-10764]

16.8 Hyperlinks

You can add hyperlinks to tasks.

```
@startgantt
[task1] lasts 10 days
[task1] links to [[http://plantuml.com]]
@endgantt
```

16.9 Calendar

You can specify a starting date for the whole project. By default, the first task starts at this date.

```
@startgantt
Project starts the 20th of september 2017
[Prototype design] as [TASK1] lasts 13 days
[TASK1] is colored in Lavender/LightBlue
@endgantt
```

16.10 Coloring days

It is possible to add colors to some days.

```
@startgantt
Project starts the 2020/09/01

2020/09/07 is colored in salmon
2020/09/13 to 2020/09/16 are colored in lightblue

[Prototype design] as [TASK1] lasts 22 days
[TASK1] is colored in Lavender/LightBlue
[Prototype completed] happens at [TASK1]'s end
@endgantt
```

16.11 Changing scale

You can change scale for very long project, with one of those parameters:

- printscale
- gantt scale
- project scale

and one of the values:

- daily (*by default*)
- weekly
- monthly

(See QA-11272, QA-9041 and QA-10948)

16.11.1 Daily (by default)

```
@startuml
saturday are closed
sunday are closed
```

```
Project starts the 1st of january 2021
[Prototype design end] as [TASK1] lasts 19 days
[TASK1] is colored in Lavender/LightBlue
[Testing] lasts 14 days
[TASK1]->[Testing]
```

```
2021-01-18 to 2021-01-22 are named [End's committee]
```

```
2021-01-18 to 2021-01-22 are colored in salmon
```

```
@enduml
```

16.11.2 Weekly

```
@startuml
printscale weekly
saturday are closed
sunday are closed
```

```
Project starts the 1st of january 2021
[Prototype design end] as [TASK1] lasts 19 days
[TASK1] is colored in Lavender/LightBlue
[Testing] lasts 14 days
[TASK1]->[Testing]
```

```
2021-01-18 to 2021-01-22 are named [End's committee]
```

```
2021-01-18 to 2021-01-22 are colored in salmon
```

```
@enduml
```

```
@startgantt
printscale weekly
Project starts the 20th of september 2020
[Prototype design] as [TASK1] lasts 130 days
[TASK1] is colored in Lavender/LightBlue
[Testing] lasts 20 days
[TASK1]->[Testing]
```

```
2021-01-18 to 2021-01-22 are named [End's committee]
```

```
2021-01-18 to 2021-01-22 are colored in salmon
```

```
@endgantt
```

16.11.3 Monthly

```
@startgantt
projectscale monthly
Project starts the 20th of september 2020
[Prototype design] as [TASK1] lasts 130 days
[TASK1] is colored in Lavender/LightBlue
[Testing] lasts 20 days
[TASK1]->[Testing]

2021-01-18 to 2021-01-22 are named [End's committee]
2021-01-18 to 2021-01-22 are colored in salmon
@endgantt
```

16.12 Close day

It is possible to close some day.

```
@startgantt
project starts the 2018/04/09
saturday are closed
sunday are closed
2018/05/01 is closed
2018/04/17 to 2018/04/19 is closed
[Prototype design] lasts 14 days
[Test prototype] lasts 4 days
[Test prototype] starts at [Prototype design]'s end
[Prototype design] is colored in Fuchsia/FireBrick
[Test prototype] is colored in GreenYellow/Green
@endgantt
```

Then it is possible to open some closed day.

```
@startgantt
2020-07-07 to 2020-07-17 is closed
2020-07-13 is open

Project starts the 2020-07-01
[Prototype design] lasts 10 days
Then [Test prototype] lasts 10 days
@endgantt
```

16.13 Simplified task succession

It's possible to use the `then` keyword to denote consecutive tasks.

```
@startgantt
[Prototype design] lasts 14 days
then [Test prototype] lasts 4 days
then [Deploy prototype] lasts 6 days
@endgantt
```

You can also use arrow `->`

```
@startgantt
[Prototype design] lasts 14 days
[Build prototype] lasts 4 days
[Prepare test] lasts 6 days
[Prototype design] -> [Build prototype]
[Prototype design] -> [Prepare test]
@endgantt
```

16.14 Separator

You can use `--` to separate sets of tasks.

```
@startgantt
[Task1] lasts 10 days
then [Task2] lasts 4 days
-- Phase Two --
then [Task3] lasts 5 days
then [Task4] lasts 6 days
@endgantt
```

16.15 Working with resources

You can affect tasks on resources using the `on` keyword and brackets for resource name.

```
@startgantt
[Task1] on {Alice} lasts 10 days
```

```
[Task2] on {Bob:50%} lasts 2 days
then [Task3] on {Alice:25%} lasts 1 days
@endgantt
```

Multiple resources can be assigned to a task:

```
@startgantt
[Task1] on {Alice} {Bob} lasts 20 days
@endgantt
```

Resources can be marked as off on specific days:

```
@startgantt
project starts on 2020-06-19
[Task1] on {Alice} lasts 10 days
{Alice} is off on 2020-06-24 to 2020-06-26
@endgantt
```

16.16 Complex example

It also possible to use the **and** conjunction.

You can also add delays in constraints.

```
@startgantt
[Prototype design] lasts 13 days and is colored in Lavender/LightBlue
[Test prototype] lasts 9 days and is colored in Coral/Green and starts 3 days after [Prototype design]
[Write tests] lasts 5 days and ends at [Prototype design]'s end
[Hire tests writers] lasts 6 days and ends at [Write tests]'s start
[Init and write tests report] is colored in Coral/Green
[Init and write tests report] starts 1 day before [Test prototype]'s start and ends at [Test prototype]'s end
@endgantt
```

16.17 Comments

As is mentioned on Common Commands page: `blockquote` Everything that starts with `simple quote` ' is a comment.

You can also put comments on several lines using `/'` to start and `/'` to end. `blockquote` (i.e.: the first character (except space character) of a comment line must be a *simple quote* ')

```
@startgantt
' This is a comment

[T1] lasts 3 days

/' this comment
is on several lines '/

[T2] starts at [T1]'s end and lasts 1 day
@endgantt
```

16.18 Using style

16.18.1 Without style (by default)

```
@startuml
[Task1] lasts 20 days
note bottom
  memo1 ...
  memo2 ...
  explanations1 ...
  explanations2 ...
end note
[Task2] lasts 4 days
[Task1] -> [Task2]
-- Separator title --
[M1] happens on 5 days after [Task1]'s end
-- end --
@enduml
```

16.18.2 With style

You can use `style` to change rendering of elements.

```
@startuml
<style>
ganttDiagram {
task {
  FontName Helvetica
  FontColor red
  FontSize 18

```

```

FontStyle bold
BackColor GreenYellow
LineColor blue
}
milestone {
FontColor blue
FontSize 25
FontStyle italic
BackColor yellow
LineColor red
}
note {
FontColor DarkGreen
FontSize 10
LineColor OrangeRed
}
arrow {
FontName Helvetica
FontColor red
FontSize 18
FontStyle bold
BackColor GreenYellow
LineColor blue
}
separator {
LineColor red
BackColor green
FontSize 16
FontStyle bold
FontColor purple
}
}
</style>
[Task1] lasts 20 days
note bottom
  memo1 ...
  memo2 ...
  explanations1 ...
  explanations2 ...
end note
[Task2] lasts 4 days
[Task1] -> [Task2]
-- Separator title --
[M1] happens on 5 days after [Task1]'s end
-- end --
@enduml

```

[Ref. QA-10835, QA-12045, QA-11877 and PR-438]

TODO: TODO Awaiting style for Separator and all style for Arrow (thickness...)

16.19 Add notes

```
@startgantt
[task01] lasts 15 days
note bottom
    memo1 ...
    memo2 ...
    explanations1 ...
    explanations2 ...
end note

[task01] -> [task02]

@endgantt
```

Example with overlap.

```
@startgantt
[task01] lasts 15 days
note bottom
    memo1 ...
    memo2 ...
    explanations1 ...
    explanations2 ...
end note

[task01] -> [task02]
[task03] lasts 5 days

@endgantt
```

```
@startgantt

-- test01 --

[task01] lasts 4 days
note bottom
'note left
memo1 ...
memo2 ...
explanations1 ...
explanations2 ...
end note

[task02] lasts 8 days
[task01] -> [task02]
note bottom
```

```

'note left
memo1 ...
memo2 ...
explanations1 ...
explanations2 ...
end note
-- test02 --

[task03] as [t3] lasts 7 days
[t3] -> [t4]
@endgantt

```

TODO: DONE Thanks for correction (of #386 on v1.2020.18) when overlapping

```
@startgantt
```

```
Project starts 2020-09-01
```

```

[taskA] starts 2020-09-01 and lasts 3 days
[taskB] starts 2020-09-10 and lasts 3 days
[taskB] displays on same row as [taskA]

```

```
[task01] starts 2020-09-05 and lasts 4 days
```

@endgantt

```

16.20 Pause tasks

```

@startgantt
Project starts the 5th of december 2018
saturday are closed
sunday are closed
2018/12/29 is opened
[Prototype design] lasts 17 days
[Prototype design] pauses on 2018/12/13
[Prototype design] pauses on 2018/12/14
[Prototype design] pauses on monday
[Test prototype] starts at [Prototype design]'s end and lasts 2 weeks
@endgantt

```

16.21 Change link colors

```

@startgantt
[T1] lasts 4 days
[T2] lasts 4 days and starts 3 days after [T1]'s end with blue dotted link
[T3] lasts 4 days and starts 3 days after [T2]'s end with green bold link
[T4] lasts 4 days and starts 3 days after [T3]'s end with green dashed link
@endgantt

```

```

@startuml
Links are colored in blue
[Prototype design] lasts 14 days
[Build prototype] lasts 4 days
[Prepare test] lasts 6 days

```

```
[Prototype design] -[#FF00FF]-> [Build prototype]
[Prototype design] -[dotted]-> [Prepare test]
@enduml
```

16.22 Tasks or Milestones on the same line

```
@startgantt
[Prototype design] lasts 13 days
[Test prototype] lasts 4 days and 1 week
[Test prototype] starts 1 week and 2 days after [Prototype design]'s end
[Test prototype] displays on same row as [Prototype design]
[r1] happens on 5 days after [Prototype design]'s end
[r2] happens on 5 days after [r1]'s end
[r3] happens on 5 days after [r2]'s end
[r2] displays on same row as [r1]
[r3] displays on same row as [r1]
@endgantt
```

16.23 Highlight today

```
@startgantt
Project starts the 20th of september 2018
sunday are close
2018/09/21 to 2018/09/23 are colored in salmon
2018/09/21 to 2018/09/30 are named [Vacation in the Bahamas]

today is 30 days after start and is colored in #AAF
[Foo] happens 40 days after start
[Dummy] lasts 10 days and starts 10 days after start
@endgantt
```

16.24 Task between two milestones

```
@startgantt
project starts on 2020-07-01
[P_start] happens 2020-07-03
[P_end] happens 2020-07-13
[Prototype design] occurs from [P_start] to [P_end]
@endgantt
```

16.25 Grammar and verbal form

Verbal form	Example
[T] starts	
[M] happens	

16.26 Add title, header, footer, caption or legend on gantt diagram

```
@startuml
```

```
header some header
```

```
footer some footer
```

```
title My title
```

```
[Prototype design] lasts 13 days
```

```
legend
```

```
The legend
```

```
end legend
```

```
caption This is caption
```

```
@enduml
```

(See also: *Common commands*)

16.27 Removing Foot Boxes

You can use the `hide footbox` keywords to remove the foot boxes of the gantt diagram (*as for sequence diagram*).

Examples on:

- daily scale (*without project start*)

```
@startgantt
```

```
hide footbox
```

```
title Foot Box removed
```

```
[Prototype design] lasts 15 days
```

```
[Test prototype] lasts 10 days
```

```
@endgantt
```

- daily scale

```
@startgantt
```

```
Project starts the 20th of september 2017
[Prototype design] as [TASK1] lasts 13 days
[TASK1] is colored in Lavender/LightBlue
```

```
hide footbox
@endgantt
```

- weekly scale

```
@startgantt
hide footbox
```

```
printscales weekly
saturday are closed
sunday are closed
```

```
Project starts the 1st of january 2021
[Prototype design end] as [TASK1] lasts 19 days
[TASK1] is colored in Lavender/LightBlue
[Testing] lasts 14 days
[TASK1]->[Testing]
```

```
2021-01-18 to 2021-01-22 are named [End's committee]
2021-01-18 to 2021-01-22 are colored in salmon
@endgantt
```

- monthly scale

```
@startgantt
```

```
hide footbox
```

```
projectscale monthly
Project starts the 20th of september 2020
[Prototype design] as [TASK1] lasts 130 days
[TASK1] is colored in Lavender/LightBlue
[Testing] lasts 20 days
[TASK1]->[Testing]
```

```
2021-01-18 to 2021-01-22 are named [End's committee]
2021-01-18 to 2021-01-22 are colored in salmon
```

@endgantt

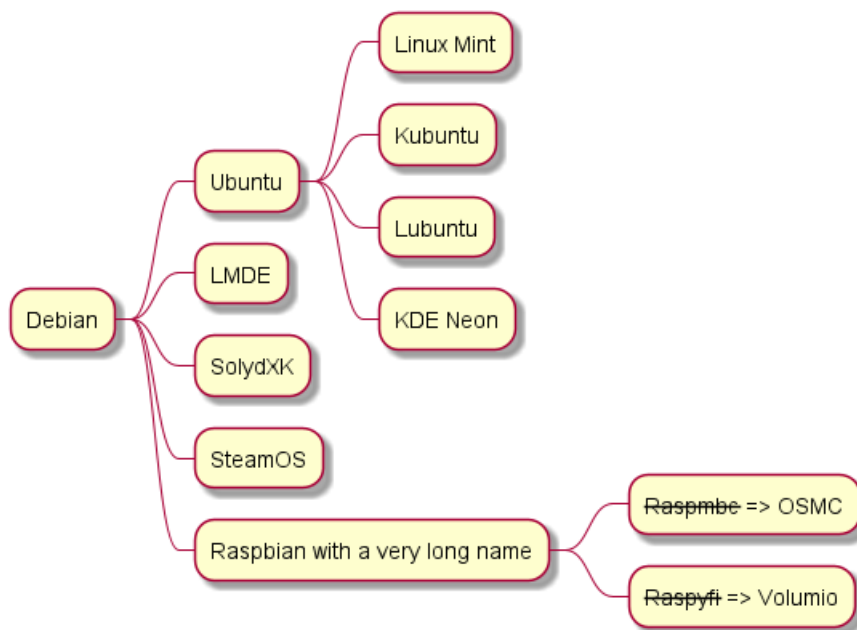

17 MindMap

MindMap diagram are still in beta: the syntax may change without notice.

17.1 OrgMode syntax

This syntax is compatible with OrgMode

```
@startmindmap
* Debian
** Ubuntu
*** Linux Mint
*** Kubuntu
*** Lubuntu
*** KDE Neon
** LMDE
** SolydXK
** SteamOS
** Raspbian with a very long name
*** <s>Raspmbc</s> => OSMC
*** <s>Raspyfi</s> => Volumio
@endmindmap
```

17.2 Markdown syntax

This syntax is compatible with Markdown

```
@startmindmap
* root node
* some first level node
* second level node
* another second level node
* another first level node
@endmindmap
```

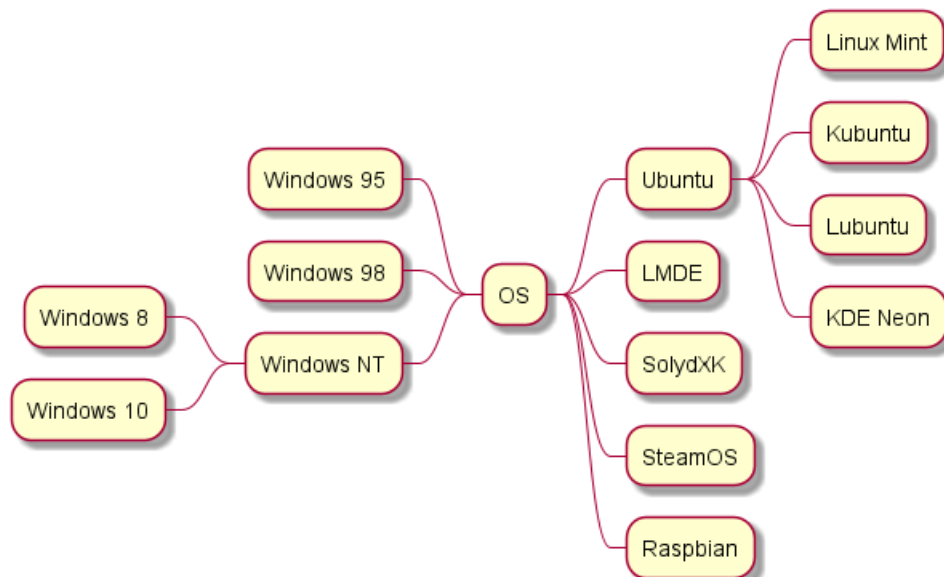

17.3 Arithmetic notation

You can use the following notation to choose diagram side.

```

@startmindmap
+ OS
++ Ubuntu
+++ Linux Mint
+++ Kubuntu
+++ Lubuntu
+++ KDE Neon
++ LMDE
++ SolydXK
++ SteamOS
++ Raspbian
-- Windows 95
-- Windows 98
-- Windows NT
--- Windows 8
--- Windows 10
@endmindmap
  
```

17.4 Multilines

You can use : and ; to have multilines box.

```

@startmindmap
* Class Templates
  
```

```

**Example 1
<code>
template <typename T>
class cname{
void f1()<U+003B>
...
}
</code>
;
**Example 2
<code>
other template <typename T>
class cname{
...
</code>
;
@endmindmap

```

17.5 Colors

It is possible to change node color.

17.5.1 With inline color

- OrgMode syntax mindmap

```

@startmindmap
* [#Orange] Colors
** [#lightgreen] Green
** [#FFBCC] Rose
** [#lightblue] Blue
@endmindmap

```

- Arithmetic notation syntax mindmap

```
@startmindmap
+[#Orange] Colors
++[#lightgreen] Green
++[#FFBBCC] Rose
--[#lightblue] Blue
@endmindmap
```

- Markdown syntax mindmap

```
@startmindmap
* [#Orange] root node
  * [#lightgreen] some first level node
    * [#FFBBCC] second level node
    * [#lightblue] another second level node
  * [#lightgreen] another first level node
@endmindmap
```

17.5.2 With style color

- OrgMode syntax mindmap

```
@startmindmap
<style>
mindmapDiagram {
  .green {
    BackgroundColor lightgreen
  }
  .rose {
    BackgroundColor #FFBBCC
  }
  .your_style_name {
    BackgroundColor lightblue
  }
}
</style>
* Colors
** Green <<green>>
** Rose <<rose>>
** Blue <<your_style_name>>
@endmindmap
```

- Arithmetic notation syntax mindmap

```

@startmindmap
<style>
mindmapDiagram {
  .green {
    BackgroundColor lightgreen
  }
  .rose {
    BackgroundColor #FFBBCC
  }
  .your_style_name {
    BackgroundColor lightblue
  }
}
</style>
+ Colors
++ Green <<green>>
++ Rose <<rose>>
-- Blue <<your_style_name>>
@endmindmap
  
```

- Markdown syntax mindmap

```

@startmindmap
<style>
mindmapDiagram {
  .green {
    BackgroundColor lightgreen
  }
  .rose {
    BackgroundColor #FFBBCC
  }
  .your_style_name {
    BackgroundColor lightblue
  }
}
</style>
* root node
* some first level node <<green>>
* second level node <<rose>>
* another second level node <<your_style_name>>
  
```

```
* another first level node <<green>>
@endmindmap
```

17.6 Removing box

You can remove the box drawing using an underscore.

```
@startmindmap
* root node
** some first level node
***_ second level node
***_ another second level node
***_ foo
***_ bar
***_ foobar
** another first level node
@endmindmap
```

```
@startmindmap
*_ root node
**_ some first level node
***_ second level node
***_ another second level node
***_ foo
***_ bar
***_ foobar
**_ another first level node
@endmindmap
```

```
@startmindmap
+ root node
++ some first level node
```

```

+++_ second level node
+++_ another second level node
+++_ foo
+++_ bar
+++_ foobar
++_ another first level node
-- some first right level node
--_ another first right level node
@endmindmap

```

17.7 Changing diagram direction

It is possible to use both sides of the diagram.

```

@startmindmap
* count
** 100
*** 101
*** 102
** 200

left side

** A
*** AA
*** AB
** B
@endmindmap

```

17.8 Complete example

```

@startmindmap
caption figure 1
title My super title

* <&flag>Debian
** <&globe>Ubuntu
*** Linux Mint
*** Kubuntu
*** Lubuntu
*** KDE Neon
** <&graph>LMDE
** <&pulse>SolydXK

```

```

** <&people>SteamOS
** <&star>Raspbian with a very long name
*** <s>Raspmbc</s> => OSMC
*** <s>Raspyfi</s> => Volumio

```

```

header
My super header
endheader

center footer My super footer

```

```

legend right
Short
legend
endlegend
@endmindmap

```

My super footer

17.9 Changing style

17.9.1 node, depth

```

@startmindmap
<style>
mindmapDiagram {
    node {
        BackgroundColor lightGreen
    }
    :depth(1) {
        BackGroundColor white
    }
}

```

```

    }
}
</style>
* Linux
** NixOS
** Debian
*** Ubuntu
**** Linux Mint
**** Kubuntu
**** Lubuntu
**** KDE Neon
@endmindmap

```

17.9.2 boxless

```

@startmindmap
<style>
mindmapDiagram {
    node {
        BackgroundColor lightGreen
    }
    boxless {
        FontColor darkgreen
    }
}
</style>
* Linux
** NixOS
** Debian
***_ Ubuntu
**** Linux Mint
**** Kubuntu
**** Lubuntu
**** KDE Neon
@endmindmap

```

17.10 Word Wrap

Using `MaximumWidth` setting you can control automatic word wrap. Unit used is pixel.

@startmindmap

```

<style>
node {
    Padding 12
    Margin 3
    HorizontalAlignment center
    LineColor blue
    LineThickness 3.0
    BackgroundColor gold
    RoundCorner 40
    MaximumWidth 100
}

rootNode {
    LineStyle 8.0;3.0
    LineColor red
    BackgroundColor white
    LineThickness 1.0
    RoundCorner 0
    Shadowing 0.0
}

leafNode {
    LineColor gold
    RoundCorner 0
    Padding 3
}

arrow {
    LineStyle 4
    LineThickness 0.5
    LineColor green
}
</style>

* Hi =)
** sometimes i have node in wich i want to write a long text
*** this results in really huge diagram
**** of course, i can explicit split with a\nnew line
  
```

**** but it could be cool if PlantUML was able to split long lines, maybe with an option

@endmindmap

18 Work Breakdown Structure (WBS)

WBS diagram are still in beta: the syntax may change without notice.

18.1 OrgMode syntax

This syntax is compatible with OrgMode

```
@startwbs
* Business Process Modelling WBS
** Launch the project
*** Complete Stakeholder Research
*** Initial Implementation Plan
** Design phase
*** Model of AsIs Processes Completed
**** Model of AsIs Processes Completed1
**** Model of AsIs Processes Completed2
*** Measure AsIs performance metrics
*** Identify Quick Wins
** Complete innovate phase
@endwbs
```

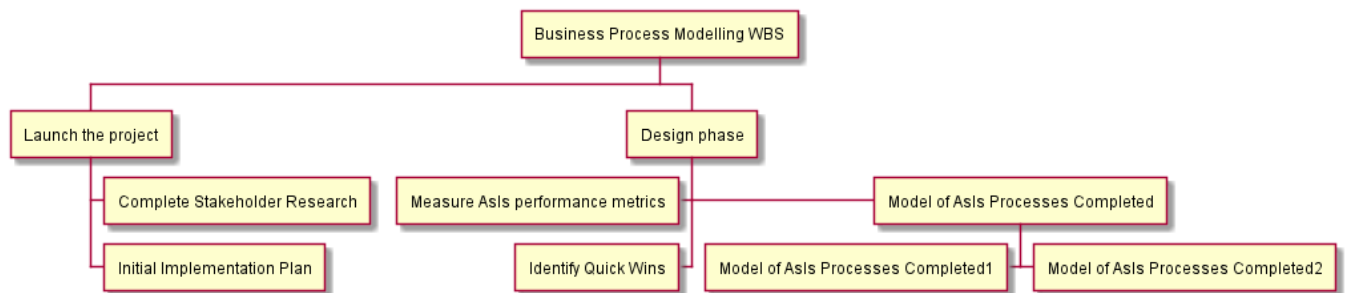

18.2 Change direction

You can change direction using < and >

```
@startwbs
* Business Process Modelling WBS
** Launch the project
*** Complete Stakeholder Research
*** Initial Implementation Plan
** Design phase
*** Model of AsIs Processes Completed
****< Model of AsIs Processes Completed1
****> Model of AsIs Processes Completed2
***< Measure AsIs performance metrics
***< Identify Quick Wins
@endwbs
```

18.3 Arithmetic notation

You can use the following notation to choose diagram side.

```

@startwbs
+ New Job
++ Decide on Job Requirements
+++ Identity gaps
+++ Review JDs
++++ Sign-Up for courses
++++ Volunteer
++++ Reading
++- Checklist
++-- Responsibilities
++-- Location
++ CV Upload Done
+++ CV Updated
++++ Spelling & Grammar
++++ Check dates
---- Skills
+++ Recruitment sites chosen
@endwbs
  
```

18.4 Removing box

You can use underscore _ to remove box drawing.

18.4.1 Boxless on Arithmetic notation

18.4.2 Several boxless node

```

@startwbs
+ Project
+ Part One
+ Task 1.1
- LeftTask 1.2
+ Task 1.3
+ Part Two
+ Task 2.1
+ Task 2.2
- _ Task 2.2.1 To the left boxless
- _ Task 2.2.2 To the Left boxless
+ _ Task 2.2.3 To the right boxless
@endwbs

```

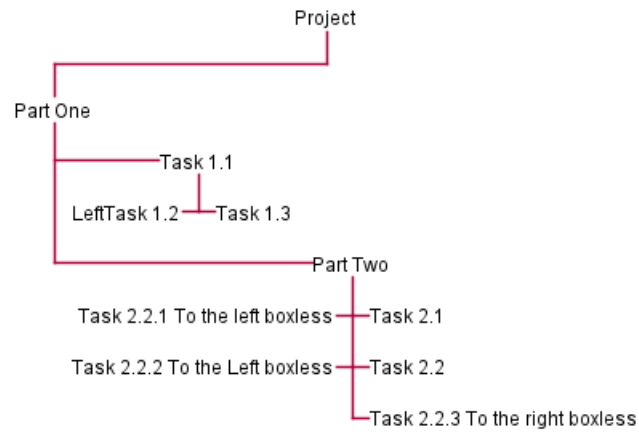

18.4.3 All boxless node

```

@startwbs
+_ Project
+_ Part One
+_ Task 1.1
- _ LeftTask 1.2
+_ Task 1.3
+_ Part Two
+_ Task 2.1
+_ Task 2.2
- _ Task 2.2.1 To the left boxless
- _ Task 2.2.2 To the Left boxless
+_ Task 2.2.3 To the right boxless
@endwbs

```

18.4.4 Boxless on OrgMode syntax

18.4.5 Several boxless node

```

@startwbs
* World
** America
*** _ Canada
*** _ Mexico
*** _ USA
** Europe
*** _ England
*** _ Germany
*** _ Spain
@endwbs
  
```

[Ref. QA-13297]

18.4.6 All boxless node

```

@startwbs
*_ World
**_ America
***_ Canada
***_ Mexico
***_ USA
**_ Europe
***_ England
***_ Germany
***_ Spain
@endwbs
  
```

[Ref. QA-13355]

18.5 Colors (with inline or style color)

It is possible to change node color:

- with inline color

```

@startwbs
* [#SkyBlue] this is the partner workpackage
** [#pink] this is my workpackage
** this is another workpackage
@endwbs
  
```

```

@startwbs
+ [#SkyBlue] this is the partner workpackage
++ [#pink] this is my workpackage
++ this is another workpackage
@endwbs
  
```

[Ref. QA-12374, only from v1.2020.20]

- with style color

```

@startwbs
<style>
wbsDiagram {
  .pink {
    BackgroundColor pink
  }
  .your_style_name {
    BackgroundColor SkyBlue
  }
}
</style>
* this is the partner workpackage <<your_style_name>>
  
```

```

** this is my workpackage <<pink>>
** this is another workpackage
@endwbs

```

```

@startwbs
<style>
wbsDiagram {
  .pink {
    BackgroundColor pink
  }
  .your_style_name {
    BackgroundColor SkyBlue
  }
}
</style>
+ this is the partner workpackage <<your_style_name>>
++ this is my workpackage <<pink>>
++ this is another workpackage
@endwbs

```

18.6 Using style

It is possible to change diagram style.

```

@startwbs
<style>
wbsDiagram {
  // all lines (meaning connector and borders, there are no other lines in WBS) are black by default
  LineColor black
  arrow {
    // note that connector are actually "arrow" even if they don't look like as arrow
    // This is to be consistent with other UML diagrams. Not 100% sure that it's a good idea
    // So now connector are green
    LineColor green
  }
  :depth(0) {
    // will target root node
    BackgroundColor White
    RoundCorner 10
    LineColor red
    // Because we are targetting depth(0) for everything, border and connector for level 0 will be
  }
  arrow {
    :depth(2) {

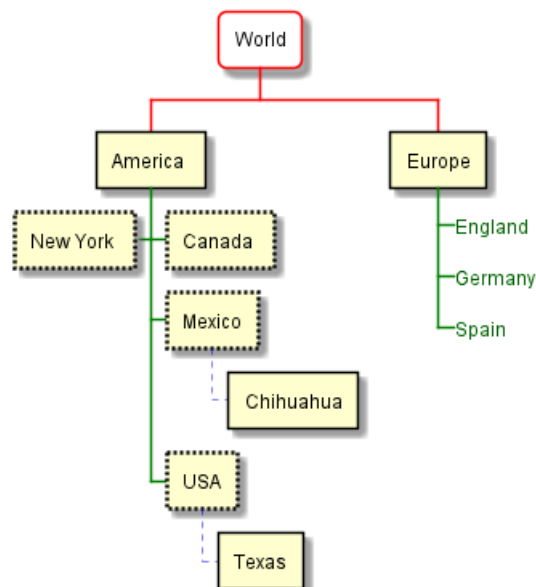

```

```

    // Targetting only connector between Mexico-Chihuahua and USA-Texas
    LineColor blue
    LineStyle 4
    LineThickness .5
  }
}
node {
  :depth(2) {
    LineStyle 2
    LineThickness 2.5
  }
}
boxless {
  // will target boxless node with '_'
  FontColor darkgreen
}
}
</style>
* World
** America
*** Canada
*** Mexico
**** Chihuahua
*** USA
**** Texas
***< New York
** Europe
***_ England
***_ Germany
***_ Spain
@endwbs

```

18.7 Word Wrap

Using `MaximumWidth` setting you can control automatic word wrap. Unit used is pixel.

@startwbs

```

<style>
node {
    Padding 12
    Margin 3
    HorizontalAlignment center
    LineColor blue
    LineThickness 3.0
    BackgroundColor gold
    RoundCorner 40
    MaximumWidth 100
}

rootNode {
    LineStyle 8.0;3.0
    LineColor red
    BackgroundColor white
    LineThickness 1.0
    RoundCorner 0
    Shadowing 0.0
}

leafNode {
    LineColor gold
    RoundCorner 0
    Padding 3
}

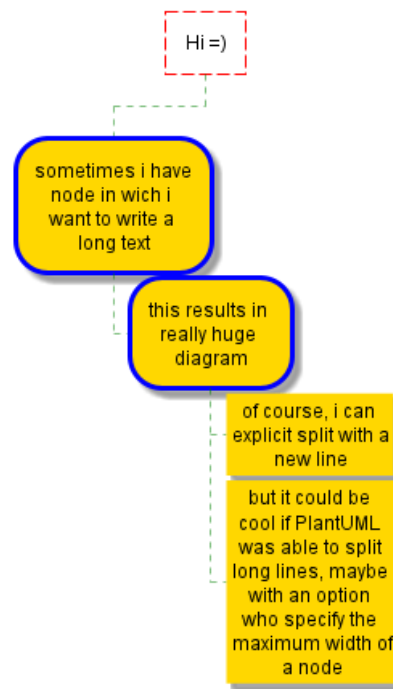

arrow {
    LineStyle 4
    LineThickness 0.5
    LineColor green
}
</style>

* Hi =)
** sometimes i have node in wich i want to write a long text
*** this results in really huge diagram
**** of course, i can explicit split with a\nnew line
**** but it could be cool if PlantUML was able to split long lines, maybe with an option who specify

@endwbs

```

19 Maths

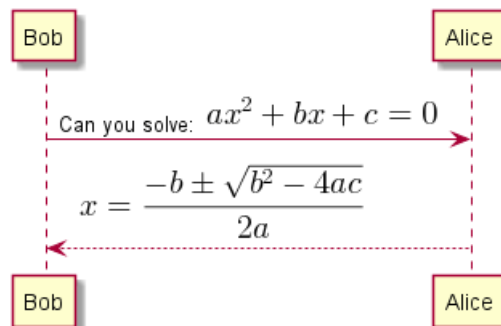

You can use AsciiMath or JLaTeXMath notation within PlantUML:

```
@startuml
:<math>int_0^1 f(x)dx</math>;
:<math>x^2+y_1+z_{12}^{34}</math>;
note right
Try also
<math>d/dxf(x)=lim_{h->0}(f(x+h)-f(x))/h</math>
<latex>P(y|\mathbf{x}) \mbox{ or } f(\mathbf{x})+\epsilon</latex>
end note
@enduml
```

or:

```
@startuml
Bob -> Alice : Can you solve: <math>ax^2+bx+c=0</math>
Alice --> Bob: <math>x = (-b+-sqrt(b^2-4ac))/(2a)</math>
@enduml
```

19.1 Standalone diagram

You can also use @startmath/@endmath to create standalone AsciiMath formula.

```
@startmath
f(t)=(a_0)/2 + \sum_{n=1}^{\infty} a_n \cos((n\pi t)/L) + \sum_{n=1}^{\infty} b_n \sin((n\pi t)/L)
@endmath
```

$$f(t) = \frac{a_0}{2} + \sum_{n=1}^{\infty} a_n \cos\left(\frac{n\pi t}{L}\right) + \sum_{n=1}^{\infty} b_n \sin\left(\frac{n\pi t}{L}\right)$$

Or use @startlatex/@endlatex to create standalone JLaTeXMath formula.

```
@startlatex
\sum_{i=0}^{n-1} (a_i + b_i^2)
@endlatex
```

$$\sum_{i=0}^{n-1} (a_i + b_i^2)$$

19.2 How is this working?

To draw those formulas, PlantUML uses two open source projects:

- AsciiMath that converts AsciiMath notation to LaTeX expression;
- JLatexMath that displays mathematical formulas written in LaTeX. JLaTeXMath is the best Java library to display LaTeX code.

ASCIIMathTeXImg.js is small enough to be integrated into PlantUML standard distribution.

PlantUML relies on the Java Scripting API (specifically: `new ScriptEngineManager().getEngineByName("JavaScript")` to load a JavaScript engine and execute JavaScript code. Java 8 includes a JavaScript engine called Nashorn but it was deprecated in Java 11.

If you are using AsciiMath in Java 11 you see the following warnings:

Warning: Nashorn engine is planned to be removed from a future JDK release

Nashorn was removed in Java 15. Fortunately, you can use the GraalVM JavaScript Engine instead by adding the following dependencies:

```
<dependency>
  <groupId>org.graalvm.js</groupId>
  <artifactId>js</artifactId>
  <version>20.2.0</version>
</dependency>
<dependency>
  <groupId>org.graalvm.js</groupId>
  <artifactId>js-scriptengine</artifactId>
  <version>20.2.0</version>
</dependency>
```

You can even use the GraalVM JavaScript Engine in Java 11 to get rid of the warning messages.

Since JLatexMath is bigger, you have to download it separately, then unzip the 4 jar files (*batik-all-1.7.jar*, *jlatexmath-minimal-1.0.3.jar*, *jlm_cyrillic.jar* and *jlm_greek.jar*) in the same folder as PlantUML.jar.

20 Entity Relationship Diagram

Based on the Information Engineering notation.

This is an extension to the existing Class Diagram. This extension adds:

- Additional relations for the Information Engineering notation.
- An **entity** alias that maps to the class diagram **class**.
- An additional visibility modifier ***** to identify mandatory attributes.

Otherwise, the syntax for drawing diagrams is the same as for class diagrams. All other features of class diagrams are also supported.

20.1 Information Engineering Relations

Type	Symbol
Zero or One	o--
Exactly One	--
Zero or Many	}o--
One or Many	} --

Examples:

```
@startuml
Entity01 }|..|| Entity02
Entity03 }o..o| Entity04
Entity05 ||--o{ Entity06
Entity07 |o--|| Entity08
@enduml
```

20.2 Entities

```
@startuml
entity Entity01 {
    * identifying_attribute
    --
    * mandatory_attribute
    optional_attribute
}
@enduml
```

Again, this is the normal class diagram syntax (aside from use of **entity** instead of **class**). Anything that you can do in a class diagram can be done here.

The ***** visibility modifier can be used to identify mandatory attributes. A space can be used after the modifier character to avoid conflicts with the creole bold:

```

@startuml
entity Entity01 {
    optional attribute
    **optional bold attribute**
    * **mandatory bold attribute**
}
@enduml

```

20.3 Complete Example

```

@startuml

' hide the spot
hide circle

' avoid problems with angled crows feet
skinparam linetype ortho

entity "Entity01" as e01 {
    *e1_id : number <<generated>>
    --
    *name : text
    description : text
}

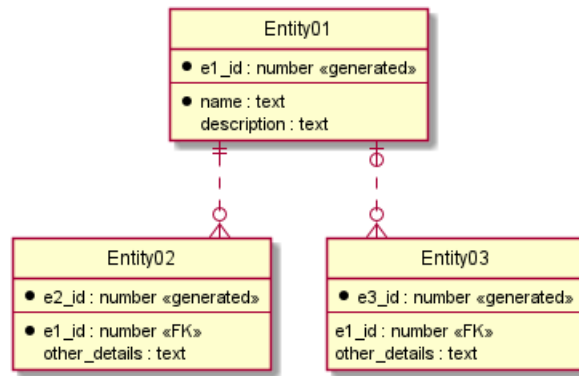

entity "Entity02" as e02 {
    *e2_id : number <<generated>>
    --
    *e1_id : number <<FK>>
    other_details : text
}

entity "Entity03" as e03 {
    *e3_id : number <<generated>>
    --
    e1_id : number <<FK>>
    other_details : text
}

e01 ||..o{ e02
e01 |o..o{ e03

@enduml

```

Currently the crows feet do not look very good when the relationship is drawn at an angle to the entity. This can be avoided by using the `linetype ortho` skinparam.

21 Common commands

21.1 Comments

Everything that starts with `simple quote '` is a comment.

You can also put comments on several lines using `/'` to start and `/'` to end.

21.2 Zoom

You can use the `scale` command to zoom the generated image.

You can use either a number or a fraction to define the scale factor. You can also specify either width or height (in pixel). And you can also give both width and height : the image is scaled to fit inside the specified dimension.

- `scale 1.5`
- `scale 2/3`
- `scale 200 width`
- `scale 200 height`
- `scale 200*100`
- `scale max 300*200`
- `scale max 1024 width`
- `scale max 800 height`

```
@startuml
scale 180*90
Bob->Alice : hello
@enduml
```

21.3 Title

The `title` keywords is used to put a title. You can add newline using `\n` in the title description.

Some `skinparam` settings are available to put borders on the title.

```
@startuml
skinparam titleBorderRoundCorner 15
skinparam titleBorderThickness 2
skinparam titleBorderColor red
skinparam titleBackgroundColor Aqua-CadetBlue

title Simple communication\nexample

Alice -> Bob: Authentication Request
Bob --> Alice: Authentication Response

@enduml
```

You can use creole formatting in the title.

You can also define title on several lines using `title` and `end title` keywords.

```

@startuml

title
  <u>Simple</u> communication example
  on <i>several</i> lines and using <back:cadetblue>creole tags</back>
end title

Alice -> Bob: Authentication Request
Bob -> Alice: Authentication Response

@enduml
  
```

**Simple communication example
on *several* lines and using creole tags**

21.4 Caption

There is also a `caption` keyword to put a caption under the diagram.

```

@startuml

caption figure 1
Alice -> Bob: Hello

@enduml
  
```

21.5 Footer and header

You can use the commands **header** or **footer** to add a footer or a header on any generated diagram.

You can optionally specify if you want a **center**, **left** or **right** footer/header, by adding a keyword.

As with title, it is possible to define a header or a footer on several lines.

It is also possible to put some HTML into the header or footer.

```
@startuml
Alice -> Bob: Authentication Request

header
<font color=red>Warning:</font>
Do not use in production.
endheader

center footer Generated for demonstration

@enduml
```

21.6 Legend the diagram

The **legend** and **end legend** are keywords is used to put a legend.

You can optionally specify to have **left**, **right**, **top**, **bottom** or **center** alignment for the legend.

```
@startuml
Alice -> Bob : Hello
legend right
Short
legend
endlegend
@enduml
```

```
@startuml
Alice -> Bob : Hello
legend top left
Short
legend
endlegend
```

```
@enduml
```

```

22 Creole

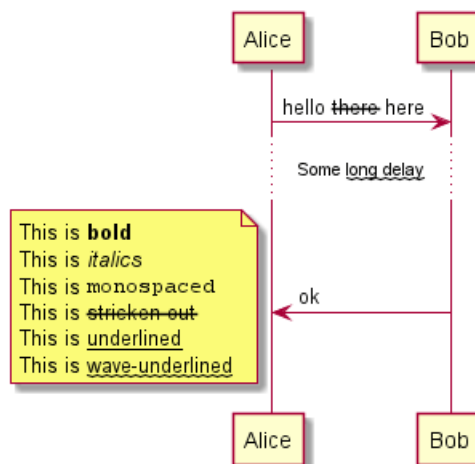

Creole is a lightweight common markup language for various wikis. A light-weight Creole engine is integrated in PlantUML to have a standardized way to emit styled text.

All diagrams support this syntax.

Note that compatibility with HTML syntax is preserved.

22.1 Emphasized text

```
@startuml
Alice -> Bob : hello --there-- here
... Some ~~long delay~~ ...
Bob -> Alice : ok
note left
  This is bold
  This is //italics//
  This is "monospaced"
  This is --stricken-out--
  This is underlined
  This is ~wave-underlined~
end note
@enduml
```

22.2 Lists

You can use numbered and bulleted lists in node text, notes, etc.

TODO: FIXME You cannot quite mix numbers and bullets in a list and its sublist.

```
@startuml
object demo {
  * Bullet list
  * Second item
}
note left
  * Bullet list
  * Second item
  ** Sub item
end note

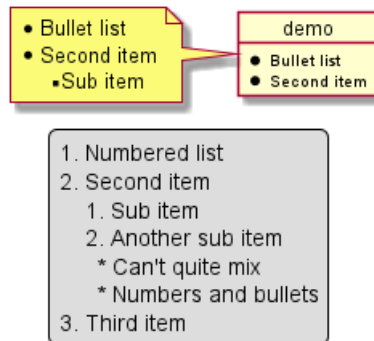

legend
  # Numbered list
  # Second item
end
```

```

## Sub item
## Another sub item
    * Can't quite mix
    * Numbers and bullets
# Third item
end legend
@enduml

```

22.3 Escape character

You can use the tilde ~ to escape special creole characters.

```

@startuml
object demo {
    This is not ~__underscored__.
    This is not ~'"monospaced"'.
}
@enduml

```

22.4 Horizontal lines

```

@startuml
database DB1 as "
You can have horizontal line
----
Or double line
=====
Or strong line
----
Or dotted line
..My title..
Enjoy!
"
note right
    This is working also in notes
    You can also add title in all these lines
    ==Title==
    --Another title--
end note
@enduml

```

22.5 Headings

```
@startuml
usecase UC1 as "
= Extra-large heading
Some text
== Large heading
Other text
=== Medium heading
Information
....
==== Small heading"
@enduml
```

22.6 Legacy HTML

You can mix Creole with the following HTML tags:

- `` for bold text
- `<u>` or `<u:#AAAAAA>` or `<u:[[color|colorName]]>` for underline
- `<i>` for italic
- `<s>` or `<s:#AAAAAA>` or `<s:[[color|colorName]]>` for strike text
- `<w>` or `<w:#AAAAAA>` or `<w:[[color|colorName]]>` for wave underline text
- `<color:#AAAAAA>` or `<color:[[color|colorName]]>`
- `<back:#AAAAAA>` or `<back:[[color|colorName]]>` for background color
- `<size:nn>` to change font size
- `<img:file>` : the file must be accessible by the filesystem
- `<img:http://plantuml.com/logo3.png>` : the URL must be available from the Internet

```
@startuml
:* You can change <color:red>text color</color>
* You can change <back:cadetblue>background color</back>
* You can change <size:18>size</size>
* You use <u>legacy</u> <b>HTML <i>tag</i></b>
```

```
* You use <u:red>color</u> <s:green>in HTML</s> <w:#0000FF>tag</w>
----
* Use image : <img:http://plantuml.com/logo3.png>
;
@enduml
```

22.7 Code

You can use `<code>` to display some programming code in your diagram (sorry, syntax highlighting is not yet supported).

```
@startuml
Alice -> Bob : hello
note right
<code>
main() {
    printf("Hello world");
}
</code>
end note
@enduml
```

This is especially useful to illustrate some PlantUML code and the resulting rendering:

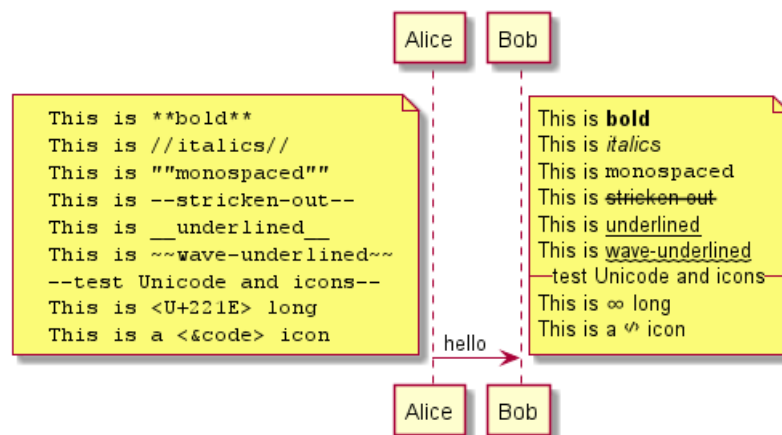

```
@startuml
Alice -> Bob : hello
note left
<code>
    This is bold
    This is italics
    This is "monospaced"
    This is stricken-out
    This is underlined
    This is wave-underlined
</code>
end note
```

```

--test Unicode and icons--
This is <U+221E> long
This is a <&code> icon
</code>
end note
note right
  This is bold
  This is //italics//
  This is "monospaced"
  This is --stricken-out--
  This is underlined
  This is ~wave-underlined~
  --test Unicode and icons--
  This is <U+221E> long
  This is a <&code> icon
end note
@enduml

```

22.8 Table

22.8.1 Create a table

It is possible to build table, with | separator.

```

@startuml
skinparam titleFontSize 14
title
  Example of simple table
  |= |= table |= header |
  | a | table | row |
  | b | table | row |
end title
[*] --> State1
@enduml

```

Example of simple table

	table	header
a	table	row
b	table	row

22.8.2 Add color on rows or cells

You can specify background colors of rows and cells:

```
@startuml
start
:Here is the result
|= |= table |= header |
| a | table | row |
|<#FF8080> red |<#80FF80> green |<#8080FF> blue |
<#yellow>| b | table | row |;
@enduml
```

22.8.3 Add color on border and text

You can also specify colors of text and borders.

```
@startuml
title
<#lightblue,#red>|= Step |= Date |= Name |= Status |= Link |
<#lightgreen>| 1.1 | TBD | plantuml news |<#Navy><color:OrangeRed><b> Unknown | [[https://plantuml.org]]
end title
@enduml
```

Step	Date	Name	Status	Link
1.1	TBD	plantuml news	Unknown	plantuml news

[Ref. QA-7184]

22.8.4 No border or same color as the background

You can also set the border color to the same color as the background.

```
@startuml
node n
note right of n
  <#FBFB77,#FBFB77>|= Husky / Yorkie |= Foo |
  | SourceTree1 | foo1 |
  | ST2 | foo2 |
end note
```

@enduml

[Ref. QA-12448]

22.8.5 Bold header or not

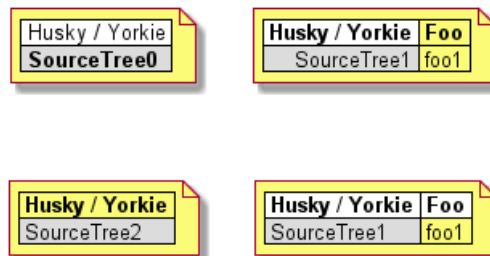

= as the first char of a cell indicates whether to make it bold (usually used for headers), or not.

```
@startuml
note as deepCSS0
  |<#white> Husky / Yorkie |
  |=<#gainsboro> SourceTree0 |
endnote

note as deepCSS1
  |= <#white> Husky / Yorkie |= Foo |
  |<#gainsboro><r> SourceTree1 | foo1 |
endnote

note as deepCSS2
  |= Husky / Yorkie |
  |<#gainsboro> SourceTree2 |
endnote

note as deepCSS3
  <#white>|= Husky / Yorkie |= Foo |
  |<#gainsboro> SourceTree1 | foo1 |
endnote
@enduml
```

[Ref. QA-10923]

22.9 Tree

You can use |_ characters to build a tree.

On common commands, like title:

```
@startuml
skinparam titleFontSize 14
title
  Example of Tree
  |_ First line
  |_ **Bom (Model)**
    |_ prop1
    |_ prop2
    |_ prop3
  |_ Last line
end
```

```

end title
[*] --> State1
@enduml

```

On Class diagram.

(Please note how we have to use an empty second compartment, else the parentheses in **(Model)** cause that text to be moved to a separate first compartment):

```

@startuml
class Foo {
**Bar (Model)**
|_ prop
|_ **Bom (Model)**
|_ prop2
|_ prop3
|_ prop3.1
|_ prop4 :(
--
}
@enduml

```

[Ref. QA-3448]

On Component or Deployment diagrams:

```

@startuml
[A] as A
rectangle "Box B" {
    component B [
        Level 1
        |_ Level 2a
        |_ Level 3a
        |_ Level 3b
        |_ Level 3c
        |_ Level 4a
        |_ Level 3d
        |_ Level 2b
    ]
}

```

```

    |_ Level 3e
  ]
}
A -> B
@enduml

```

[Ref. QA-11365]

22.10 Special characters

It's possible to use any unicode character, either directly or with syntax `&#XXX` or `<U+XXXX>`:

```

@startuml
usecase direct as "this is ∞ long"
usecase ampHash as "this is also &#8734; long"
usecase angleBrackets as "this is also <U+221E> long"
@enduml

```

22.11 OpenIconic

OpenIconic is a very nice open-source icon set. Those icons are integrated in the creole parser, so you can use them out-of-the-box.

Use the following syntax: `<&ICON_NAME>`.

```

@startuml
title: <size:20><&heart>Use of OpenIconic<&heart></size>
class Wifi
note left
  Click on <&wifi>
end note
@enduml

```

The complete list is available at the OpenIconic Website, or you can use the following special command to list them:

```
@startuml
listopeniconic
@enduml
```

List Open Iconic

23 Defining and using sprites

A *Sprite* is a small graphic element that can be used in diagrams.

In PlantUML, sprites are monochrome and can have either 4, 8 or 16 gray level.

To define a sprite, you have to use a hexadecimal digit between 0 and F per pixel.

Then you can use the sprite using <\$XXX> where XXX is the name of the sprite.

```
@startuml
sprite $foo1 {
  FFFFFFFFFFFFFFFF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  FFFFFFFFFFFFFFFF
}
Alice -> Bob : Testing <$foo1>
@enduml
```

You can scale the sprite.

```
@startuml
sprite $foo1 {
  FFFFFFFFFFFFFFFF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  FFFFFFFFFFFFFFFF
}
Alice -> Bob : Testing <$foo1{scale=3}>
@enduml
```

23.1 Changing colors

Although sprites are monochrome, it's possible to change their color.

```
@startuml
sprite $foo1 {
  FFFFFFFFFFFFFFFF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  F0123456789ABCF
  FFFFFFFFFFFFFFFF
}
Alice -> Bob : Testing <$foo1,scale=3.4,color=orange>
@enduml
```

23.2 Encoding Sprite

To encode sprite, you can use the command line like:

```
java -jar plantuml.jar -encodesprite 16z foo.png
```

where `foo.png` is the image file you want to use (it will be converted to gray automatically).

After `-encodesprite`, you have to specify a format: 4, 8, 16, 4z, 8z or 16z.

The number indicates the gray level and the optional `z` is used to enable compression in sprite definition.

23.3 Importing Sprite

You can also launch the GUI to generate a sprite from an existing image.

Click in the menubar then on `File/Open Sprite Window`.

After copying an image into your clipboard, several possible definitions of the corresponding sprite will be displayed : you will just have to pickup the one you want.

23.4 Examples

```
@startuml
sprite $printer [15x15/8z] N0tH3W0W208HxFz_kMAhj7lHWpa1XC716sz0Pq4MVPEWfBHIuxP3L6kbTcizR8tAhzaqFvXwv
start
:click on <$printer> to print the page;
@enduml
```

```

@startuml
sprite $bug [15x15/16z] PKzR2i0m2BFMi15p__FEjQEqB1z27aeqCqixa8S40T7C53cKpsHpaYPDJY_12MHM-BLRyywPhrr:
sprite $printer [15x15/8z] N0tH3WOW208HxFz_kMAhj7lHWpa1XC716sz0Pq4MVPEWfBHIuxP3L6kbTcizR8tAhzaqFvXw:
sprite $disk {
  444445566677881
  436000000009991
  43600000000ACA1
  53700000001A7A1
  537000000012B8A1
  538000000123B8A1
  63800001233C9A1
  634999AABBC99B1
  744566778899AB1
  7456AAAAA99AAB1
  8566AFC228AABB1
  8567AC8118BBBB1
  867BD4433BBBBB1
  39AAAAABBBBBBC1
}

title Use of sprites (<$printer>, <$bug>...)

class Example {
  Can have some bug : <$bug>
  Click on <$disk> to save
}

note left : The printer <$printer> is available

@enduml

```

23.5 StdLib

The PlantUML StdLib includes a number of ready icons in various IT areas such as architecture, cloud services, logos etc. It including AWS, Azure, Kubernetes, C4, product Logos and many others. To explore these libraries:

- Browse the Github folders of PlantUML StdLib
- Browse the source repos of StdLib collections that interest you. Eg if you are interested in logos you can find that it came from gilbarbara-plantuml-sprites, and quickly find its

sprites-list. (The next section shows how to list selected sprites but unfortunately that's in grayscale whereas this custom listing is in color.)

- Study the in-depth Hitchhiker' s Guide to PlantUML, eg sections Standard Library Sprites and PlantUML Stdlib Overview

23.6 Listing Sprites

You can use the `listsprites` command to show available sprites:

- Used on its own, it just shows ArchiMate sprites

- If you include some sprite libraries in your diagram, the command shows all these sprites, as explained in View all the icons with listsprites.

(Example from Hitchhikers Guide to PlantUML)

```
@startuml
```

```
!define osaPuml https://raw.githubusercontent.com/Crashedmind/PlantUML-opensecurityarchitecture2-icons
```

```
!include osaPuml/Common.puml
```

```
!include osaPuml/User/all.puml
```

```
listsprites
```

```
@enduml
```

Most collections have files called **all** that allow you to see a whole sub-collection at once. Else you need to find the sprites that interest you and include them one by one. Unfortunately, the version of a collection included in StdLib often does not have such **all** files, so as you see above we include the collection from github, not from StdLib.

All sprites are in grayscale, but most collections define specific macros that include appropriate (vendor-specific) colors.

24 Skinparam command

You can change colors and font of the drawing using the `skinparam` command.

Example:

```
skinparam backgroundColor transparent
```

24.1 Usage

You can use this command :

- In the diagram definition, like any other commands,
- In an included file,
- In a configuration file, provided in the command line or the ANT task.

24.2 Nested

To avoid repetition, it is possible to nest definition. So the following definition :

```
skinparam xxxxParam1 value1
skinparam xxxxParam2 value2
skinparam xxxxParam3 value3
skinparam xxxxParam4 value4
```

is strictly equivalent to:

```
skinparam xxxx {
    Param1 value1
    Param2 value2
    Param3 value3
    Param4 value4
}
```

24.3 Black and White

You can force the use of a black&white output using `skinparam monochrome true` command.

```
@startuml
```

```
skinparam monochrome true
```

```
actor User
participant "First Class" as A
participant "Second Class" as B
participant "Last Class" as C
```

```
User -> A: DoWork
activate A
```

```
A -> B: Create Request
activate B
```

```
B -> C: DoWork
activate C
C --> B: WorkDone
destroy C
```

```
B --> A: Request Created
deactivate B
```

```

A --> User: Done
deactivate A

@enduml

```

24.4 Shadowing

You can disable the shadowing using the `skinparam shadowing false` command.

```

@startuml

left to right direction

skinparam shadowing<<no_shadow>> false
skinparam shadowing<<with_shadow>> true

actor User
(Glowing use case) <<with_shadow>> as guc
(Flat use case) <<no_shadow>> as fuc
User -- guc
User -- fuc

@enduml

```

24.5 Reverse colors

You can force the use of a black&white output using `skinparam monochrome reverse` command. This can be useful for black background environment.

```

@startuml

skinparam monochrome reverse

```

```

actor User
participant "First Class" as A
participant "Second Class" as B
participant "Last Class" as C

User -> A: DoWork
activate A

A -> B: Create Request
activate B

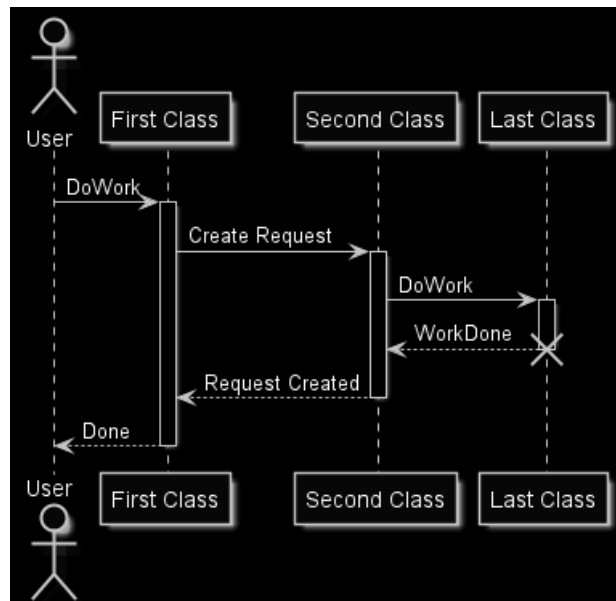

B -> C: DoWork
activate C
C --> B: WorkDone
destroy C

B --> A: Request Created
deactivate B

A --> User: Done
deactivate A

@enduml

```

24.6 Colors

You can use either standard color name or RGB code.

```

@startuml
colors
@enduml

```

APPLICATION	Crimson	DeepPink	Indigo	LightYellow	Navy	RoyalBlue	Turquoise
AliceBlue	Cyan	DeepSkyBlue	Ivory	Lime	OldLace	STRATEGY	Violet
AntiqueWhite	DarkBlue	DimGray	Khaki	LimeGreen	Olive	SaddleBrown	Wheat
Aqua	DarkCyan	DimGrey	Lavender	Linen	OliveDrab	Salmon	White

Chocolate	DarkSlateGrey	HoneyDew	LightSkyBlue	MintCream	PowderBlue	Tan	
Coral	DarkTurquoise	HotPink	LightSlateGray	MistyRose	Purple	Teal	
CornflowerBlue	DarkViolet	IMPLEMENTATION	LightSlateGrey	Moccasin	Red	Thistle	
Cornsilk	Darkorange	IndianRed	LightSteelBlue	NavajoWhite	RosyBrown	Tomato	

transparent can only be used for background of the image.

24.7 Font color, name and size

You can change the font for the drawing using `xxxFontColor`, `xxxFontSize` and `xxxFontName` parameters.

Example:

```
skinparam classFontColor red
skinparam classFontSize 10
skinparam classFontName Aapex
```

You can also change the default font for all fonts using `skinparam defaultFontName`.

Example:

```
skinparam defaultFontName Aapex
```

Please note the fontname is highly system dependent, so do not over use it, if you look for portability. Helvetica and Courier should be available on all system.

A lot of parameters are available. You can list them using the following command:

```
java -jar plantuml.jar -language
```

24.8 Text Alignment

Text alignment can be set up to `left`, `right` or `center`. You can also use `direction` or `reverseDirection` values for `sequenceMessageAlign` which align text depending on arrow direction.

Param name	Default value	Comment
<code>sequenceMessageAlign</code>	<code>left</code>	Used for messages in sequence diagrams
<code>sequenceReferenceAlign</code>	<code>center</code>	Used for <code>ref over</code> in sequence diagrams

```
@startuml
skinparam sequenceMessageAlign center
Alice -> Bob : Hi
Alice -> Bob : This is very long
@enduml
```

24.9 Examples

```

@startuml
skinparam backgroundColor #EEEBDC
skinparam handwritten true

skinparam sequence {
  ArrowColor DeepSkyBlue
  ActorBorderColor DeepSkyBlue
  LifeLineBorderColor blue
  LifeLineBackgroundColor #A9DCDF

  ParticipantBorderColor DeepSkyBlue

24.10 List of all skinparam parameters

Since the documentation is not always up to date, you can have the complete list of parameters using this command:

```
java -jar plantuml.jar -language
```

Or you can generate a "diagram" with a list of all the skinparam parameters using `help skinparams`.

That will give you the following result, from this page (*code of this command*):

- CommandHelpSkinparam.java

```
@startuml
```

```
help skinparams
@enduml
```

Help on skinparam

The code of this command is located in *net.sourceforge.plantuml.help* package.

You may improve it on <https://github.com/plantuml/plantuml/tree/master/src/net/sourceforge/plantuml/help>

The possible skinparam are :

- ActivityBackgroundColor
- ActivityBarColor
- ActivityBorderColor
- ActivityBorderThickness
- ActivityDiamondBackgroundColor
- ActivityDiamondBorderColor
- ActivityDiamondFontColor
- ActivityDiamondFontName
- ActivityDiamondFontSize
- ActivityDiamondFontStyle
- ActivityEndColor
- ActivityFontColor
- ActivityFontName
- ActivityFontSize
- ActivityFontStyle
- ActivityStartColor
- ActorBackgroundColor
- ActorBorderColor
- ActorFontColor
- ActorFontName
- ActorFontSize
- ActorFontStyle
- ActorStereotypeFontColor
- ActorStereotypeFontName
- ActorStereotypeFontSize
- ActorStereotypeFontStyle
- AgentBackgroundColor
- AgentBorderColor
- AgentBorderThickness
- AgentFontColor
- AgentFontName
- AgentFontSize
- AgentFontStyle
- AgentStereotypeFontColor
- AgentStereotypeFontName
- AgentStereotypeFontSize
- AgentStereotypeFontStyle
- ArchimateBackgroundColor
- ArchimateBorderColor
- ArchimateBorderThickness
- ArchimateFontColor
- ArchimateFontName
- ArchimateFontSize
- ArchimateFontStyle
- ArchimateStereotypeFontColor
- ArchimateStereotypeFontName
- ArchimateStereotypeFontSize
- ArchimateStereotypeFontStyle
- ArrowColor
- ArrowFontColor
- ArrowFontName
- ArrowFontSize
- ArrowFontStyle
- ArrowHeadColor
- ArrowLollipopColor
- ArrowMessageAlignment
- ArrowThickness

You can also view each skinparam parameters with its results displayed at the page **All Skin Parameters** of **Ashley's PlantUML Doc**:

- <https://plantuml-documentation.readthedocs.io/en/latest/formatting/all-skin-params.html>.

25 Preprocessing

Some preprocessing capabilities are included in **PlantUML**, and available for *all* diagrams.

Those functionalities are very similar to the C language preprocessor, except that the special character `#` has been changed to the exclamation mark `!`.

25.1 Migration notes

The current preprocessor is an update from some legacy preprocessor.

Even if some legacy features are still supported with the actual preprocessor, you should not use them any more (they might be removed in some long term future).

- You should not use `!define` and `!definelong` anymore. Use `!function`, `!procedure` or variable definition instead.
 - `!define` should be replaced by `return !function`
 - `!definelong` should be replaced by `!procedure`.
- `!include` now allows multiple inclusions : you don't have to use `!include_many` anymore
- `!include` now accepts a URL, so you don't need `!includeurl`
- Some features (like `%date%`) have been replaced by builtin functions (for example `%date()`)
- When calling a legacy `!definelong` macro with no arguments, you do have to use parenthesis. You have to use `my_own_definelong()` because `my_own_definelong` without parenthesis is not recognized by the new preprocessor.

Please contact us if you have any issues.

25.2 Variable definition

Although this is not mandatory, we highly suggest that variable names start with a `$`.

There are two types of data:

- **Integer number** (*int*);
- **String** (*str*) - these must be surrounded by single quote or double quote.

Variables created outside function are **global**, that is you can access them from everywhere (including from functions). You can emphasize this by using the optional `global` keyword when defining a variable.

```
@startuml
!$ab = "foo1"
!$cd = "foo2"
!$ef = $ab + $cd
```

```
Alice -> Bob : $ab
Alice -> Bob : $cd
Alice -> Bob : $ef
@enduml
```

25.3 Boolean expression

25.3.1 Boolean representation [0 is false]

There is not real boolean type, but PlantUML use this integer convention:

- Integer 0 means **false**
- and any non-null number (as 1) or any string (as "1", or even "0") means **true**.

[Ref. QA-9702]

25.3.2 Boolean operation and operator [&&, ||, ()]

You can use boolean expression, in the test, with :

- *parenthesis* ();
- *and operator* &&;
- *or operator* ||.

(See next example, within *if* test.)

25.3.3 Boolean builtin functions [%false(), %true(), %not(<exp>)]

For convenience, you can use those boolean builtin functions:

- %false()
- %true()
- %not(<exp>)

[See also Builtin functions]

25.4 Conditions [!if, !else, !elseif, !endif]

- You can use expression in condition.
- *else* and *elseif* are also implemented

```
@startuml
!$a = 10
!$ijk = "foo"
Alice -> Bob : A
!if ($ijk == "foo") && ($a+10>=4)
Alice -> Bob : yes
!else
Alice -> Bob : This should not appear
!endif
Alice -> Bob : B
@enduml
```

25.5 While loop [!while, !endwhile]

You can use !while and !endwhile keywords to have repeat loops.

```
@startuml
!procedure $foo($arg)
  :procedure start;
  !while $arg!=0
    !$i=3
    #palegreen:arg=$arg;
    !while $i!=0
      :arg=$arg and i=$i;
      !$i = $i - 1
    !endwhile
    !$arg = $arg - 1
  !endwhile
  :procedure end;
!endprocedure

start
$foo(2)
end
@enduml
```

[Adapted from QA-10838]

```
@startmindmap
!procedure $foo($arg)
```

```

!while $arg!=0
  !$i=3
  **[#palegreen] arg = $arg;
  !while $i!=0
    *** i = $i;
    !$i = $i - 1
  !endwhile
  !$arg = $arg - 1
!endwhile
!endprocedure

```

```

*:While
Loop;
$foo(2)
@endmindmap

```

25.6 Procedure [!procedure, !endprocedure]

- Procedure names *should* start with a \$
- Argument names *should* start with a \$
- Procedures can call other procedures

Example:

```

@startuml
!procedure $msg($source, $destination)
  $source --> $destination
!endprocedure

```

```

!procedure $init_class($name)
  class $name {
    $addCommonMethod()
  }
!endprocedure

```

```

!procedure $addCommonMethod()
  toString()
  hashCode()

```

```
!endprocedure
```

```
$init_class("foo1")
$init_class("foo2")
$msg("foo1", "foo2")
@enduml
```

Variables defined in procedures are **local**. It means that the variable is destroyed when the procedure ends.

25.7 Return function [!function, !endfunction]

A return function does not output any text. It just define a function that you can call:

- directly in variable definition or in diagram text
- from other return functions
- from procedures
- Function name *should* start with a \$
- Argument names *should* start with a \$

```
@startuml
!function $double($a)
!return $a + $a
!endfunction
```

```
Alice -> Bob : The double of 3 is $double(3)
@enduml
```

It is possible to shorten simple function definition in one line:

```
@startuml
!function $double($a) !return $a + $a
```

```
Alice -> Bob : The double of 3 is $double(3)
Alice -> Bob : $double("This work also for strings.")
@enduml
```

As in procedure (void function), variable are local by default (they are destroyed when the function is exited). However, you can access to global variables from function. However, you can use the `local` keyword to create a local variable if ever a global variable exists with the same name.

```

@startuml
!function $dummy()
!local $ijk = "local"
!return "Alice -> Bob : " + $ijk
!endfunction

!global $ijk = "foo"

Alice -> Bob : $ijk
$dummy()
Alice -> Bob : $ijk
@enduml
  
```

25.8 Default argument value

In both procedure and return functions, you can define default values for arguments.

```

@startuml
!function $inc($value, $step=1)
!return $value + $step
!endfunction

Alice -> Bob : Just one more $inc(3)
Alice -> Bob : Add two to three : $inc(3, 2)
@enduml
  
```

Only arguments at the end of the parameter list can have default values.

```

@startuml
!procedure defaultttest($x, $y="DefaultY", $z="DefaultZ")
note over Alice
  x = $x
  y = $y
  z = $z
end note
!endprocedure

defaultttest(1, 2, 3)
defaultttest(1, 2)
defaultttest(1)
@enduml

```

25.9 Unquoted procedure or function [!unquoted]

By default, you have to put quotes when you call a function or a procedure. It is possible to use the `unquoted` keyword to indicate that a function or a procedure does not require quotes for its arguments.

```

@startuml
!unquoted function id($text1, $text2="FOO") !return $text1 + $text2

alice -> bob : id(aa)
alice -> bob : id(ab,cd)
@enduml

```

25.10 Keywords arguments

Like in Python, you can use keywords arguments :

```

@startuml

!unquoted procedure $element($alias, $description="", $label="", $technology="", $size=12, $colour="")
rectangle $alias as "

```

```

<color:$colour><<$alias>></color>
==$label==
//<size:$size>[$technology]</size>

    $description"
!endprocedure

$element(myalias, "This description is %newline()on several lines", $size=10, $technology="Java")
@enduml

```

25.11 Including files or URL [`!include`, `!include_many`, `!include_once`]

Use the `!include` directive to include file in your diagram. Using URL, you can also include file from Internet/Intranet.

Imagine you have the very same class that appears in many diagrams. Instead of duplicating the description of this class, you can define a file that contains the description.

```

@startuml

interface List
List : int size()
List : void clear()
List <|.. ArrayList
@enduml

```

File `List.iuml`

```

interface List
List : int size()
List : void clear()

```

The file `List.iuml` can be included in many diagrams, and any modification in this file will change all diagrams that include it.

You can also put several `@startuml/@enduml` text block in an included file and then specify which block you want to include adding `!0` where 0 is the block number. The `!0` notation denotes the first diagram.

For example, if you use `!include foo.txt!1`, the second `@startuml/@enduml` block within `foo.txt` will be included.

You can also put an id to some `@startuml/@enduml` text block in an included file using `@startuml(id=MY_OWN_ID)` syntax and then include the block adding `!MY_OWN_ID` when including the file, so using something like `!include foo.txt!MY_OWN_ID`.

By default, a file can only be included once. You can use `!include_many` instead of `!include` if you want to include some file several times. Note that there is also a `!include_once` directive that raises an error if a file is included several times.

25.12 Including Subpart [!startsub, !endsub, !includesub]

You can also use `!startsub NAME` and `!endsub` to indicate sections of text to include from other files using `!includesub`. For example:

file1.puml:

```
@startuml
A -> A : stuff1
!startsub BASIC
B -> B : stuff2
!endsub
C -> C : stuff3
!startsub BASIC
D -> D : stuff4
!endsub
@enduml
```

file1.puml would be rendered exactly as if it were:

```
@startuml
A -> A : stuff1
B -> B : stuff2
C -> C : stuff3
D -> D : stuff4
@enduml
```

However, this would also allow you to have another file2.puml like this:

file2.puml

```
@startuml
title this contains only B and D
!includesub file1.puml!BASIC
@enduml
```

This file would be rendered exactly as if:

```
@startuml
title this contains only B and D
B -> B : stuff2
D -> D : stuff4
@enduml
```

25.13 Builtin functions [%]

Some functions are defined by default. Their name starts by %

Name	Description	Example
%date	Retrieve current date. You can provide an optional format for the date	%date("yyyy.MM.d")
%dirpath	Retrieve current dirpath	%dirpath()
%false	Return always false	%false()
%file_exists	Check if a file exists on the local filesystem	%file_exists("c:")
%filename	Retrieve current filename	%filename()
%function_exists	Check if a function exists	%function_exists()
%get_variable_value	Retrieve some variable value	%get_variable_value()
%getenv	Retrieve environment variable value	%getenv("OS")
%intval	Convert a String to Int	%intval("42")
%lower	Return a lowercase string	%lower("Hello")
%newline	Return a newline	%newline()
%not	Return the logical negation of an expression	%not(2+2==4)
%set_variable_value	Set a global variable	%set_variable_value()
%string	Convert an expression to String	%string(1 + 2)
%strlen	Calculate the length of a String	%strlen("foo")
%strpos	Search a substring in a string	%strpos("abcdef", "c")
%substr	Extract a substring. Takes 2 or 3 arguments	%substr("abcdef", 1, 3)
%true	Return always true	%true()
%upper	Return an uppercase string	%upper("Hello")
%variable_exists	Check if a variable exists	%variable_exists()
%version	Return PlantUML current version	%version()

25.14 Logging [!log]

You can use `!log` to add some log output when generating the diagram. This has no impact at all on the diagram itself. However, those logs are printed in the command line's output stream. This could be useful for debug purpose.

```
@startuml
!function bold($text)
!$result = "<b>"+ $text + "</b>"
!log Calling bold function with $text. The result is $result
!return $result
!endfunction
```

```
Alice -> Bob : This is bold("bold")
Alice -> Bob : This is bold("a second call")
@enduml
```

25.15 Memory dump [!memory_dump]

You can use `!memory_dump` to dump the full content of the memory when generating the diagram. An optional string can be put after `!memory_dump`. This has no impact at all on the diagram itself. This could be useful for debug purpose.

```
@startuml
!function $inc($string)
!$val = %intval($string)
!log value is $val
```

```
!dump_memory
!return $val+1
!endfunction

Alice -> Bob : 4 $inc("3")
!unused = "foo"
!dump_memory EOF
@enduml
```

25.16 Assertion [!assert]

You can put assertions in your diagram.

```
@startuml
Alice -> Bob : Hello
!assert %strpos("abcdef", "cd")==3 : "This always fails"
@enduml
```

Welcome to PlantUML!

You can start with a simple UML Diagram like:

```
Bob->Alice: Hello
```

Or

```
class Example
```

You will find more information about PlantUML syntax on <https://plantuml.com>

(If you use this software, you accept its license)
(Details by typing `license` keyword)

```
PlantUML 1.2021.3beta6
[From string (line 3) ]

@startuml
Alice -> Bob : Hello
!assert %strpos("abcdef", "cd")==3 : "This always fails"
Assertion error : This always fails
```

25.17 Building custom library [!import, !include]

It's possible to package a set of included files into a single .zip or .jar archive. This single zip/jar can then be imported into your diagram using `!import` directive.

Once the library has been imported, you can `!include` file from this single zip/jar.

Example:

```
@startuml

!import /path/to/customLibrary.zip
' This just adds "customLibrary.zip" in the search path

!include myFolder/myFile.iuml
```

```
' Assuming that myFolder/myFile.iuml is located somewhere
' either inside "customLibrary.zip" or on the local filesystem
...
```

25.18 Search path

You can specify the java property `plantuml.include.path` in the command line.

For example:

```
java -Dplantuml.include.path="c:/mydir" -jar plantuml.jar atest1.txt
```

Note the this `-D` option has to put before the `-jar` option. `-D` options after the `-jar` option will be used to define constants within plantuml preprocessor.

25.19 Argument concatenation [##]

It is possible to append text to a macro argument using the `##` syntax.

```
@startuml
!unquoted procedure COMP_TEXTGENCOMP(name)
[name] << Comp >>
interface Ifc << IfcType >> AS name##Ifc
name##Ifc - [name]
!endprocedure
COMP_TEXTGENCOMP(dummy)
@enduml
```

25.20 Dynamic invocation [%invoke_procedure(), %call_user_func()]

You can dynamically invoke a procedure using the special `%invoke_procedure()` procedure. This procedure takes as first argument the name of the actual procedure to be called. The optional following arguments are copied to the called procedure.

For example, you can have:

```
@startuml
!procedure $go()
    Bob -> Alice : hello
!endprocedure

!$wrapper = "$go"

%invoke_procedure($wrapper)
@enduml
```

```
@startuml
!procedure $go($txt)
    Bob -> Alice : $txt

```

```
!endprocedure
```

```
%invoke_procedure("$go", "hello from Bob...")
@enduml
```

For return functions, you can use the corresponding special function `%call_user_func()` :

```
@startuml
!function bold($text)
!return "<b>"+ $text + "</b>"
!endfunction
```

```
Alice -> Bob : %call_user_func("bold", "Hello") there
@enduml
```

25.21 Evaluation of addition depending of data types [+]

Evaluation of `$a + $b` depending of type of `$a` or `$b`

```
@startuml
title
<#LightBlue>|= |= $a |= $b |= <U+0025>string($a + $b)|
<#LightGray>| type | str | str | str (concatenation) |
| example |= "a" |= "b" |= %string("a" + "b") |
<#LightGray>| type | str | int | str (concatenation) |
| ex. |= "a" |= 2 |= %string("a" + 2) |
<#LightGray>| type | str | int | str (concatenation) |
| ex. |= 1 |= "b" |= %string(1 + "b") |
<#LightGray>| type | bool | str | str (concatenation) |
| ex. |= <U+0025>true() |= "b" |= %string(%true() + "b") |
<#LightGray>| type | str | bool | str (concatenation) |
| ex. |= "a" |= <U+0025>false() |= %string("a" + %false()) |
<#LightGray>| type | int | int | int (addition of int) |
| ex. |= 1 |= 2 |= %string(1 + 2) |
<#LightGray>| type | bool | int | int (addition) |
| ex. |= <U+0025>true() |= 2 |= %string(%true() + 2) |
<#LightGray>| type | int | bool | int (addition) |
| ex. |= 1 |= <U+0025>false() |= %string(1 + %false()) |
<#LightGray>| type | int | int | int (addition) |
| ex. |= 1 |= <U+0025>intval("2") |= %string(1 + %intval("2")) |
end title
@enduml
```

	\$a	\$b	%string(\$a + \$b)
type	str	str	str (concatenation)
example	"a"	"b"	ab
type	str	int	str (concatenation)
ex.	"a"	2	a2
type	str	int	str (concatenation)
ex.	1	"b"	1b
type	bool	str	str (concatenation)
ex.	%true()	"b"	1b
type	str	bool	str (concatenation)
ex.	"a"	%false()	a0
type	int	int	int (addition of int)
ex.	1	2	3
type	bool	int	int (addition)
ex.	%true()	2	3
type	int	bool	int (addition)
ex.	1	%false()	1
type	int	int	int (addition)
ex.	1	%intval("2")	3

25.22 Preprocessing JSON

You can extend the functionality of the current Preprocessing with JSON Preprocessing features:

- JSON Variable definition
- Access to JSON data
- Loop over JSON array

(See more details on Preprocessing-JSON page)

26 Unicode

The PlantUML language use *letters* to define actor, usecase and soon.

But *letters* are not only A-Z latin characters, it could be *any kind of letter from any language*.

26.1 Examples

```
@startuml
skinparam handwritten true
skinparam backgroundColor #EEEEBC

actor 使用者
participant "頭等艙" as A
participant "第二類" as B
participant "最後一堂課" as 別的東西

使用者 -> A: 完成這項工作
activate A

A -> B: 創建請求
activate B

B -> 別的東西: 創建請求
activate 別的東西
別的東西 --> B: 這項工作完成
destroy 別的東西

B --> A: 請求創建
deactivate B

A --> 使用者: 做完
deactivate A
@enduml
```

```
@startuml

(*) --> "膩平台"
--> === S1 ===
--> 鞠躬向公眾
```

```
--> === S2 ===
--> 這傢伙波武器
--> (*)
```

```
skinparam backgroundColor #AAFFFF
skinparam activityStartColor red
skinparam activityBarColor SaddleBrown
skinparam activityEndColor Silver
skinparam activityBackgroundColor Peru
skinparam activityBorderColor Peru
@enduml
```

```
@startuml
skinparam usecaseBackgroundColor DarkSeaGreen
skinparam usecaseArrowColor Olive
skinparam actorBorderColor black
skinparam usecaseBorderColor DarkSlateGray
```

```
使用者 << 人類 >>
"主數據庫" as 數據庫 << 應用程式 >>
(草創) << 一桿 >>
"主数据燕" as (贏余) << 基本的 >>
```

```
使用者 -> (草創)
使用者 --> (贏余)
```

```
數據庫 --> (贏余)
@enduml
```

```

@startuml
() "Σ" as Σ
Σ - [Π]
[Π] ..> () A : A
@enduml

```

26.2 Charset

The default charset used when *reading* the text files containing the UML text description is system dependent.

Normally, it should just be fine, but in some case, you may want to the use another charset. For example, with the command line:

```
java -jar plantuml.jar -charset UTF-8 files.txt
```

Or, with the ant task:

```

<!-- Put images in c:/images directory -->
<target name="main">
<plantuml dir="./src" charset="UTF-8" />

```

Depending of your Java installation, the following charset should be available: ISO-8859-1, UTF-8, UTF-16BE, UTF-16LE, UTF-16.

27 Standard Library

This page explains the official Standard Library (`stdlib`) for PlantUML. This Standard Library is now included in official releases of PlantUML. Including files follows the C convention for "C standard library".

Contents of the library come from third party contributors. We thank them for their useful contribution!

27.1 List of Standard Library

You can list standard library folders using the special diagram:

```
@startuml
stdlib
@enduml
```

archimate

Version 0.0.1

Delivered by <https://github.com/ebbypeter/Archimate-PlantUML>

aws

Version 18.02.22

Delivered by <https://github.com/milo-minderbinder/AWS-PlantUML>

tupadr3

Version 2.2.0

Delivered by <https://github.com/tupadr3/plantuml-icon-font-sprites>

It is also possible to use the command line `java -jar plantuml.jar -stdlib` to display the same list.

Finally, you can extract the full standard library sources using `java -jar plantuml.jar -extractstdlib`. All files will be extracted in the folder `stdlib`.

Sources used to build official PlantUML releases are hosted here <https://github.com/plantuml/plantuml-stdlib>. You can create Pull Request to update or add some library if you find it relevant.

27.2 ArchiMate [archimate]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/archimate>
- <https://github.com/ebbypeter/ArchiMate-PlantUML>

This repository contains ArchiMate PlantUML macros and other includes for creating ArchiMate Diagrams easily and consistantly.

```
@startuml
!include <archimate/ArchiMate>

title Archimate Sample - Internet Browser

27.3 AWS library [aws]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/aws>
- <https://github.com/milo-minderbinder/AWS-PlantUML>

The AWS library consists of Amazon AWS icons, it provides icons of two different sizes (normal and large).

Use it by including the file that contains the sprite, eg: `!include <aws/Storage/AmazonS3/AmazonS3>`. When imported, you can use the sprite as normally you would, using `<$sprite_name>`.

You may also include the `common.puml` file, eg: `!include <aws/common>`, which contains helper macros defined. With the `common.puml` imported, you can use the `NAME_OF_SPRITE(parameters...)` macro.

Example of usage:

```

@startuml
!include <aws/common>
!include <aws/Storage/AmazonS3/AmazonS3>

AMAZONS3(s3_internal)
AMAZONS3(s3_partner,"Vendor's S3")
s3_internal <- s3_partner
@enduml

```

```

@startuml
!include <aws/common>
!include <aws/Storage/AmazonS3/AmazonS3>
!include <aws/Storage/AmazonS3/AmazonS3_LARGE>

skinparam nodeBackgroundColor White
skinparam storage<<«AmazonS3»>> {
    backgroundColor #F9DFDC
}
AMAZONS3(s3_internal,"Default S3")
AMAZONS3(s3_internal2,"S3 as node",node)
AMAZONS3_LARGE(s3_partner,"Large S3")

s3_internal2 <-r- s3_partner
s3_internal <-l- s3_partner
@enduml

```

27.4 Amazon Labs AWS Library [awslib]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/awslib>
- <https://github.com/aws-labs/aws-icons-for-plantuml>

The Amazon Labs AWS library provides PlantUML sprites, macros, and other includes for Amazon Web Services (AWS) services and resources.

Used to create PlantUML diagrams with AWS components. All elements are generated from the official

AWS Architecture Icons and when combined with PlantUML and the C4 model, are a great way to communicate your design, deployment, and topology as code.

```
@startuml
'Copyright 2019 Amazon.com, Inc. or its affiliates. All Rights Reserved.
'SPDX-License-Identifier: MIT (For details, see https://github.com/aws-labs/aws-icons-for-plantuml/blob/master/LICENSE)

!include <awslib/AWSCommon>

' Uncomment the following line to create simplified view
' !include <awslib/AWSSimplified>

!include <awslib/General/Users>
!include <awslib/Mobile/APIGateway>
!include <awslib/SecurityIdentityAndCompliance/Cognito>
!include <awslib/Compute/Lambda>
!include <awslib/Database/DynamoDB>

left to right direction

Users(sources, "Events", "millions of users")
APIGateway(votingAPI, "Voting API", "user votes")
Cognito(userAuth, "User Authentication", "jwt to submit votes")
Lambda(generateToken, "User Credentials", "return jwt")
Lambda(recordVote, "Record Vote", "enter or update vote per user")
DynamoDB(voteDb, "Vote Database", "one entry per user")

sources --> userAuth
sources --> votingAPI
userAuth <--> generateToken
votingAPI --> recordVote
recordVote --> voteDb
@enduml
```

27.5 Azure library [azure]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/azure>
- <https://github.com/RicardoNiepel/Azure-PlantUML/>

The Azure library consists of Microsoft Azure icons.

Use it by including the file that contains the sprite, eg: `!include <azure/Analytics/AzureEventHub.puml>`. When imported, you can use the sprite as normally you would, using `<$sprite_name>`.

You may also include the `AzureCommon.puml` file, eg: `!include <azure/AzureCommon.puml>`, which contains helper macros defined. With the `AzureCommon.puml` imported, you can use the `NAME_OF_SPRITE(parameters...)` macro.

Example of usage:

```
@startuml
!include <azure/AzureCommon.puml>
!include <azure/Analytics/AzureEventHub.puml>
!include <azure/Analytics/AzureStreamAnalytics.puml>
!include <azure/Databases/AzureCosmosDb.puml>

left to right direction

agent "Device Simulator" as devices #fff

AzureEventHub(fareDataEventHub, "Fare Data", "PK: Medallion HackLicense VendorId; 3 TUs")
```

```

AzureEventHub(tripDataEventHub, "Trip Data", "PK: Medallion HackLicense VendorId; 3 TUs")
AzureStreamAnalytics(streamAnalytics, "Stream Processing", "6 SUs")
AzureCosmosDb(outputCosmosDb, "Output Database", "1,000 RUs")

```

```

devices --> fareDataEventHub
devices --> tripDataEventHub
fareDataEventHub --> streamAnalytics
tripDataEventHub --> streamAnalytics
streamAnalytics --> outputCosmosDb
@enduml

```

27.6 C4 Library [C4]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/C4>
- <https://github.com/plantuml-stdlib/C4-PlantUML>

```

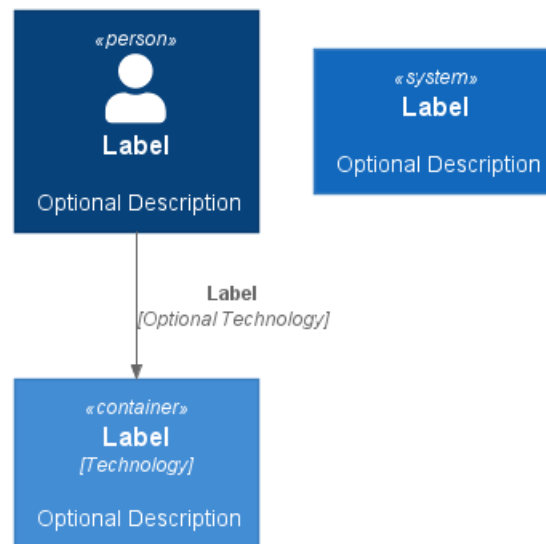

@startuml
!include <C4/C4_Container>

Person(personAlias, "Label", "Optional Description")
Container(containerAlias, "Label", "Technology", "Optional Description")
System(systemAlias, "Label", "Optional Description")

Rel(personAlias, containerAlias, "Label", "Optional Technology")
@enduml

```

27.7 Cloud Insight [cloudinsight]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/cloudinsight>
- <https://github.com/rabelenda/cicon-plantuml-sprites>

This repository contains PlantUML sprites generated from Cloudinsight icons, which can easily be used in PlantUML diagrams for nice visual representation of popular technologies.

```

@startuml
!include <cloudinsight/tomcat>
!include <cloudinsight/kafka>
!include <cloudinsight/java>
!include <cloudinsight/cassandra>

title Cloudinsight sprites example

skinparam monochrome true

rectangle "<$tomcat>\nwebapp" as webapp
queue "<$kafka>" as kafka
rectangle "<$java>\ndaemon" as daemon
database "<$cassandra>" as cassandra

webapp -> kafka
kafka --> daemon
daemon --> cassandra
@enduml

```

27.8 Clodogu [cloudogu]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/cloudogu>
- <https://github.com/cloudogu/plantuml-cloudogu-sprites>
- <https://cloudogu.com>

The Cloudogu library provides PlantUML sprites, macros, and other includes for Cloudogu services and resources.

```
@startuml
!include <cloudogu/common.puml>
!include <cloudogu/dogus/jenkins.puml>
!include <cloudogu/dogus/cloudogu.puml>
!include <cloudogu/dogus/scm.puml>
!include <cloudogu/dogus/smeagol.puml>
!include <cloudogu/dogus/nexus.puml>
!include <cloudogu/tools/k8s.puml>

node "Cloudogu Ecosystem" <<$cloudogu>> {
DOGU_JENKINS(jenkins, Jenkins) #ffffff
DOGU_SCM(scm, SCM-Manager) #ffffff
DOGU_SMEAGOL(smeagol, Smeagol) #ffffff

}

TOOL_K8S(k8s, Kubernetes) #ffffff

actor developer

developer --> smeagol : "Edit Slides"
smeagol -> scm : Push
scm -> jenkins : Trigger
jenkins -> nexus : Deploy
jenkins --> k8s : Deploy
@enduml
```

All cloudogu sprites

See all possible cloudogu sprites on [plantuml-cloudogu-sprites](https://github.com/plantuml-cloudogu-sprites).

27.9 Elastic library [elastic]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/elastic>
- <https://github.com/Crashedmind/PlantUML-Elastic-icons>

The Elastic library consists of Elastic icons. It is similar in use to the AWS and Azure libraries (it used the same tool to create them).

Use it by including the file that contains the sprite, eg: `!include elastic/elastic_search/elastic_search.puml`. When imported, you can use the sprite as normally you would, using `<$sprite_name>`.

You may also include the `common.puml` file, eg: `!include <elastic/common>`, which contains helper macros defined. With the `common.puml` imported, you can use the `NAME//OF//SPRITE(parameters...)` macro.

Example of usage:

```

@startuml
!include <elastic/common>
!include <elastic/elasticsearch/elasticsearch>
!include <elastic/logstash/logstash>
!include <elastic/kibana/kibana>

ELASTICSEARCH(ElasticSearch, "Search and Analyze",database)
LOGSTASH(Logstash, "Parse and Transform",node)
KIBANA(Kibana, "Visualize",agent)

Logstash -right-> ElasticSearch: Transformed Data
ElasticSearch -right-> Kibana: Data to View
@enduml

@enduml
```

27.10 Google Material Icons [material]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/material>
- <https://github.com/Templarian/MaterialDesign>

This library consists of a free Material style icons from Google and other artists.

Use it by including the file that contains the sprite, eg: `!include <material/ma_folder_move>`. When imported, you can use the sprite as normally you would, using `<$ma_sprite_name>`. Notice that this library requires an `ma_` prefix on sprites names, this is to avoid clash of names if multiple sprites have the same name on different libraries.

You may also include the `common.puml` file, eg: `!include <material/common>`, which contains helper macros defined. With the `common.puml` imported, you can use the `MA_NAME_OF_SPRITE(parameters...)`

macro, note again the use of the prefix MA_.

Example of usage:

```
@startuml
!include <material/common>
' To import the sprite file you DON'T need to place a prefix!
!include <material/folder_move>

MA_FOLDER_MOVE(Red, 1, dir, rectangle, "A label")
@enduml
```

Notes:

When mixing sprites macros with other elements you may get a syntax error if, for example, trying to add a rectangle along with classes. In those cases, add { and } after the macro to create the empty rectangle.

Example of usage:

```
@startuml
!include <material/common>
' To import the sprite file you DON'T need to place a prefix!
!include <material/folder_move>

MA_FOLDER_MOVE(Red, 1, dir, rectangle, "A label") {
}

class foo {
    bar
}
@enduml
```

27.11 Kubernetes [kubernetes]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/kubernetes>
- <https://github.com/michiel/plantuml-kubernetes-sprites>

```
@startuml
!include <kubernetes/k8s-sprites-unlabeled-25pct>
package "Infrastructure" {
    component "<$master>\nmaster" as master
    component "<$etcd>\netcd" as etcd
    component "<$node>\nnode" as node
}
@enduml
```

27.12 Logos [logos]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/logos>
- [https://github.com/plantuml/plantuml-stdlib/gilbarbara-plantuml-sprites](https://github.com/plantuml-stdlib/gilbarbara-plantuml-sprites)

This repository contains PlantUML sprites generated from Gil Barbara's logos, which can easily be used in PlantUML diagrams for nice visual aid.

```
@startuml
!include <logos/flask.puml>
!include <logos/kafka.puml>
!include <logos/kotlin.puml>
!include <logos/cassandra.puml>

title Gil Barbara's logos example

skinparam monochrome true

rectangle "<$flask>\nwebapp" as webapp
queue "<$kafka>" as kafka
rectangle "<$kotlin>\ndaemon" as daemon
database "<$cassandra>" as cassandra

webapp -> kafka
kafka -> daemon
daemon --> cassandra
@enduml
```

Gil Barbara's logos example

```

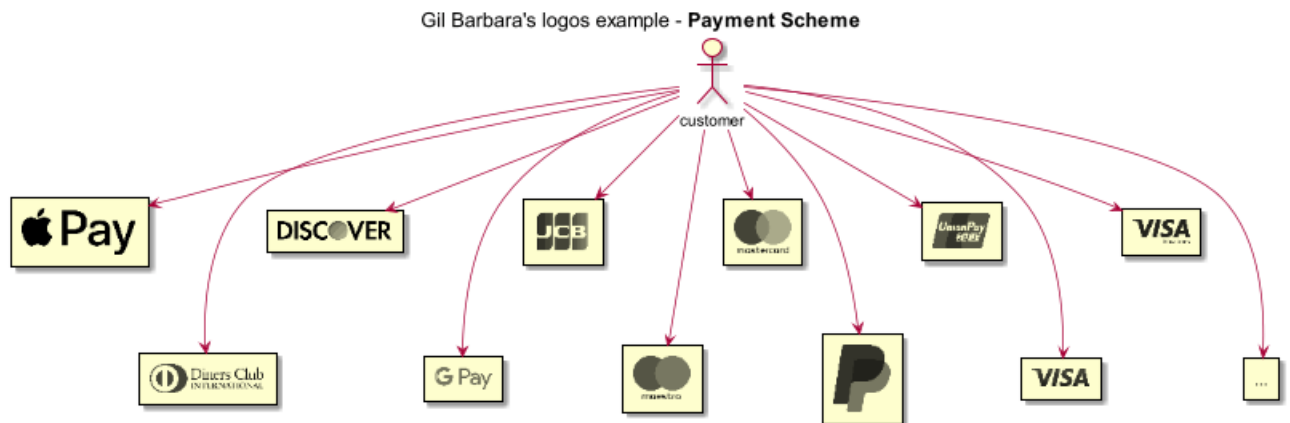

@startuml
scale 0.7
!include <logos/apple-pay.puml>
!include <logos/dinersclub.puml>
!include <logos/discover.puml>
!include <logos/google-pay.puml>
!include <logos/jcb.puml>
!include <logos/maestro.puml>
!include <logos/mastercard.puml>
!include <logos/paypal.puml>
!include <logos/unionpay.puml>
!include <logos/visaelectron.puml>
!include <logos/visa.puml>
' ...

title Gil Barbara's logos example - **Payment Scheme**

actor customer
rectangle "<$apple-pay>" as ap
rectangle "<$dinersclub>" as dc

@enduml

```

27.13 Office [office]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/office>
- <https://github.com/Roemer/plantuml-office>

There are sprites (*.puml) and colored png icons available. Be aware that the sprites are all only monochrome even if they have a color in their name (due to automatically generating the files). You can either color the sprites with the macro (see examples below) or directly use the fully colored pngs. See the following examples on how to use the sprites, the pngs and the macros.

Example of usage:

```
@startuml
!include <tupadr3/common>

!include <office/Servers/database_server>
!include <office/Servers/application_server>
!include <office/Concepts/firewall_orange>
!include <office/Clouds/cloud_disaster_red>

title Office Icons Example

package "Sprites" {
    OFF_DATABASE_SERVER(db,DB)
    OFF_APPLICATION_SERVER(app,App-Server)
    OFF_FIREWALL_ORANGE(fw,Firewall)
    OFF_CLOUD_DISASTER_RED(cloud,Cloud)
    db <-> app
    app <--> fw
    fw <..left.> cloud
}
@enduml
```

```

@startuml
!include <tupadr3/common>

!include <office/servers/database_server>
!include <office/servers/application_server>
!include <office/Concepts/firewall_orange>
!include <office/Clouds/cloud_disaster_red>

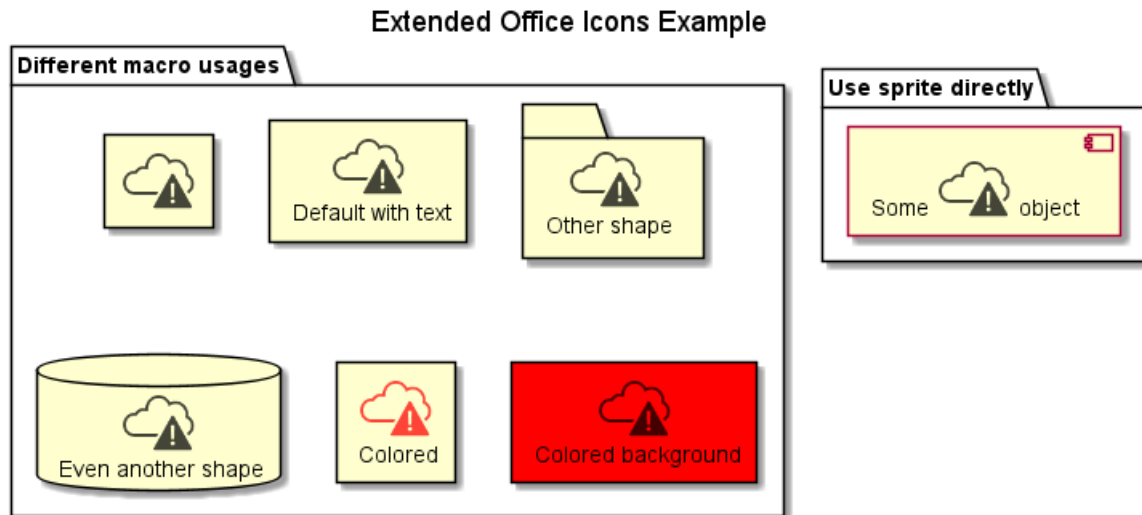

' Used to center the label under the images
skinparam defaultTextAlignment center

title Extended Office Icons Example

package "Use sprite directly" {
    [Some <$cloud_disaster_red> object]
}

package "Different macro usages" {
    OFF_CLOUD_DISASTER_RED(cloud1)
    OFF_CLOUD_DISASTER_RED(cloud2,Default with text)
    OFF_CLOUD_DISASTER_RED(cloud3,Other shape,Folder)
    OFF_CLOUD_DISASTER_RED(cloud4,Even another shape,Database)
    OFF_CLOUD_DISASTER_RED(cloud5,Colored,Rectangle, red)
    OFF_CLOUD_DISASTER_RED(cloud6,Colored background) #red
}
@enduml

```

27.15 Tupadr3 library [tupadr3]

- <https://github.com/plantuml/plantuml-stdlib/tree/master/tupadr3>
- <https://github.com/tupadr3/plantuml-icon-font-sprites>

This library contains several libraries of icons (including Devicons and Font Awesome).

Use it by including the file that contains the sprite, eg: `!include <font-awesome/align_center>`. When imported, you can use the sprite as normally you would, using `<$sprite_name>`.

You may also include the `common.puml` file, eg: `!include <font-awesome/common>`, which contains helper macros defined. With the `common.puml` imported, you can use the `NAME_OF_SPRITE(parameters...)` macro.

Example of usage:

```
@startuml
!include <tupadr3/common>
!include <tupadr3/font-awesome/server>
!include <tupadr3/font-awesome/database>
```

title Styling example

```
